DECT<sup>TM</sup>, PLUGTESTS<sup>TM</sup>, UMTS<sup>TM</sup> and the ETSI logo are Trade Marks of ETSI registered for the benefit of its Members. **3GPP**<sup>™</sup> and **LTE**<sup>™</sup> are Trade Marks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners.

GSM® and the GSM logo are Trade Marks registered and owned by the GSM Association.

# Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <u>http://webapp.etsi.org/key/queryform.asp</u>.

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document...

## 1 Scope

The present document establishes the minimum radio frequency performance of UTRA FDD repeaters.

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.
- [1] ITU-R Recommendation SM.329: "Unwanted emissions in the spurious domain".
- [2] 3GPP TS 25.143: "UTRA Repeater Conformance Testing".
- [3] 3GPP TS 25.113: "Base Station and Repeater Electromagnetic Compatibility".
- [4] ETSI ETR 273-1-2: "Electromagnetic compatibility and Radio spectrum Matters (ERM); Improvement of radiated methods of measurement (using test sites) and evaluation of the corresponding measurement uncertainties; Part 1: Uncertainties in the measurement of mobile radio equipment characteristics; Sub-part 2: Examples and annexes".
- [5] 3GPP TR 25.942: "RF System Scenarios".
- [6] 3GPP TS 25.104: "UTRA(BS) FDD; Radio transmission and Reception".

## 3 Definitions, symbols and abbreviations

## 3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

Donor coupling loss: is the coupling loss between the repeater and the donor base station.

Down-link: Signal path where base station transmits and mobile receives.

**Pass band:** The repeater can have one or several pass bands. The pass band is the frequency range that the repeater operates in with operational configuration. This frequency range can correspond to one or several consecutive nominal 5 MHz channels. If they are not consecutive each subset of channels shall be considered as an individual pass band.

**Repeater:** A device that receives, amplifies and transmits the radiated or conducted RF carrier both in the down-link direction (from the base station to the mobile area) and in the up-link direction (from the mobile to the base station)

Up-link: Signal path where mobile transmits and base station receives.

## 3.2 Symbols

(void)

## 3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

DTT	Digital Terrestrial Television
EVM	Error Vector Magnitude
FDD	Frequency Division Duplex
FFS	For Further Study
IMT2000	International Mobile Telecommunication-2000
ITU	International Telecommunication Union
RCDE	Relative Code Domain Error.
RF	Radio Frequency
UARFCN	UTRA Absolute Radio Frequency Channel Number
UMTS	Universal Mobile Telecommunication System
UTRA	Universal Terrestrial Radio Access
WCDMA	Wide band Code Division Multiple Access

## 4 General

This specification applies only to UTRA-FDD repeaters.

Unless otherwise stated, all requirements in this specification apply to both the up-link and down-link directions.

# 4.1 Relationship between Minimum Requirements and Test Requirements

The Minimum Requirements given in this specification make no allowance for measurement uncertainty. The repeater test specification 25.143 section 5 [2] defines Test Tolerances. These Test Tolerances are individually calculated for each test. The Test Tolerances are used to relax the Minimum Requirements in this specification to create Test Requirements.

The measurement results returned by the Test System are compared - without any modification - against the Test Requirements as defined by the shared risk principle.

The Shared Risk principle is defined in ETR 273 Part 1 sub-part 2 section 6.5 [4].

## 4.2 Regional requirements

Some requirements in TS 25.106 may only apply in certain regions. Table 4.1 lists all requirements that may be applied differently in different regions.

Clause number	Requirement	Comments
5.1	Frequency bands	Some bands may be applied regionally.
5.2	Up-link to down-link frequency separation	The requirement is applied according to which frequency bands in Clause 5.1 that are supported by the Repeater.
5.3	Channel arrangement	The requirement is applied according to what frequency bands in clause 5.1 that are supported by the Repeater.
6.1	Maximum output power	In certain regions, the minimum requirement for normal conditions may apply also for some conditions outside the ranges of conditions defined as normal.
9.1.1	Spectrum emission mask	The mask specified may be mandatory in certain regions. In other regions this mask may not be applied.
9.2.1.1	Spurious emissions (Category A)	These requirements shall be met in cases where Category A limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.
9.2.1.2	Spurious emissions (Category B)	These requirements shall be met in cases where Category B limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.
9.2.2	Protection of the BS receiver in the operating band	This requirement may be applied for the protection of UTRA FDD BS receivers in geographic areas in which both UTRA FDD BS and UTRA FDD Repeaters are deployed.
9.2.3	Co-existence with other systems in the same geographical area	These requirements may apply in geographic areas in which both UTRA FDD Repeater and GSM900 DCS1800, PCS1900, GSM850 and/or UTRA FDD operating in another frequency band are deployed.
9.2.4	Co-existence with co-located and co-sited base stations	These requirements may be applied for the protection of other BS receivers when GSM900 DCS1800, PCS1900, GSM850 and/or FDD BS operating in another frequency band are co-located with a UTRA FDD Repeater
9.2.5	Spurious emissions: Co-existence with PHS	This requirement may be applied for the protection of PHS in geographic areas in which both PHS and UTRA FDD Repeaters are deployed.
9.2.6.1	Spurious emissions: Co-existence with UTRA TDD-Operation in the same geographic area	This requirement may be applied for the protection of UTRA UE in geographic areas in which both UTRA TDD BS and UTRA FDD Repeaters are deployed.
9.2.6.2	Spurious emissions: Co-existence with UTRA TDD - Co-location	This requirement may be applied for the protection of UTRA TDD BS receivers when UTRA TDD BS and UTRA FDD Repeaters are co-located.
9.2.7	Coexistence with services in adjacent frequency bands	This requirement may be applied for the protection in bands adjacent to the downlink band as defined in clause 5.1 in geographic areas in which both an adjacent band service and UTRA FDD Repeater are deployed.
9.2.8	Protection of public safety operations	This requirement may be applied for the protection of public safety systems in geographic areas in which both UTRA FDD Repeater and public safety systems are deployed.
11.2	Input Intermodulation: Co-location with other systems	The requirement may be applied when GSM900, DCS1800, PCS1900, GSM850 and/or UTRA FDD BS operating in another frequency band and UTRA- FDD Repeaters are co-located.
11.3	Input Intermodulation: Co- existence with other systems	These requirements may apply in geographic areas in which both UTRA FDD Repeater and GSM900, DCS1800, PCS1900, GSM850 and/or UTRA FDD operating in another frequency band are deployed.

# 5 Frequency bands and channel arrangement

# 5.1 Frequency bands

a) A UTRA/FDD Repeater is designed to operate in one or several pass bands within either of the following paired frequency bands;

Operating	UL Frequencies	DL frequencies
Band	UE transmit, Node B receive	UE receive, Node B transmit
I	1920 - 1980 MHz	2110 -2170 MHz
II	1850 -1910 MHz	1930 -1990 MHz
	1710 - 1785 MHz	1805 - 1880 MHz
IV	1710 - 1755 MHz	2110 - 2155 MHz
V	824 - 849MHz	869 - 894MHz
VI	830 - 840 MHz	875 - 885 MHz
VII	2500 - 2570 MHz	2620 - 2690 MHz
VIII	880 - 915 MHz	925 - 960 MHz
IX	1749.9 - 1784.9 MHz	1844.9 - 1879.9 MHz
Х	1710 - 1770 MHz	2110 - 2170 MHz
XI	1427.9 - 1447.9 MHz	1475.9 - 1495.9 MHz
XII	698 - 716 MHz	728 - 746 MHz
XIII	777 - 787 MHz	746 - 756 MHz
XIV	788 - 798 MHz	758 - 768 MHz
XV	Reserved	Reserved
XVI	Reserved	Reserved
XVII	Reserved	Reserved
XVII	Reserved	Reserved
XIX	830 – 845 MHz	875 – 890 MHz
XX	832 – 862 MHz	791 – 821 MHz
XXI	1447.9 – 1462.9 MHz	1495.9 – 1510.9 MHz

Table 5.1: Frequency bands

b) Deployment in other frequency bands is not precluded.

# 5.2 TX - RX frequency separation

a) A UTRA/FDD repeaters is designed to operate with the following TX to RX frequency separation

Table 5.2: TX-RX	frequency	y separation
------------------	-----------	--------------

Operating Band	TX-RX frequency separation
	190 MHz
II	80 MHz.
	95 MHz
IV	400 MHz
V	45 MHz
VI	45 MHz
VII	120 MHz
VIII	45 MHz
IX	95 MHz
Х	400 MHz
XI	48 MHz
XII	30 MHz
XIII	31 MHz
XIV	30 MHz
XIX	45 MHz
XX	41 MHz
XXI	48 MHz

- b) A UTRA/FDD repeater can support both fixed and variable up-link to down-link frequency separation.
- c) The use of other up-link to down-link frequency separations in existing or other frequency bands shall not be precluded.

## 5.3 Channel arrangement

### 5.3.1 Channel spacing

The nominal channel spacing is 5 MHz, but this can be adjusted to optimise performance in a particular deployment scenario.

### 5.3.2 Channel raster

The channel raster is 200 kHz for all bands, which means that the centre frequency must be an integer multiple of 200 kHz. In addition, a number of additional centre frequencies are specified according to the table 5.3, which means that and the centre frequencies for these channels are shifted 100 kHz relative to the general raster.

### 5.3.3 Channel number

The carrier frequency is designated by the UTRA Absolute Radio Frequency Channel Number (UARFCN).

For each operating band, the UARFCN values are defined as follows.

Uplink:  $N_U = 5 * (F_{UL} - F_{UL\_Offset})$ , for the carrier frequency range  $F_{UL\_low} \le F_{UL\_high}$ 

Downlink:  $N_D = 5 * (F_{DL} - F_{DL\_Offset})$ , for the carrier frequency range  $F_{DL\_low} \le F_{DL\_high}$ 

For each operating Band,  $F_{UL\_Offset}$ ,  $F_{UL\_low}$ ,  $F_{UL\_low}$ ,  $F_{DL\_Offset}$ ,  $F_{DL\_low}$  and  $F_{DL\_high}$  are defined in Table 5.3 for the general UARFCN. For the additional UARFCN,  $F_{UL\_Offset}$ ,  $F_{DL\_Offset}$  and the specific  $F_{UL}$  and  $F_{DL}$  are defined in Table 5.4.

	UPLINK (UL) DOWNLINK (DL)		nsmit			
Band	UARFCN formula offset	Carrier freq range	uency (F <sub>UL</sub> ) [MHz]	UARFCN formula offset	Carrier freq range	uency (F <sub>DL</sub> ) [MHz]

Table 5.4: UARFCN definition	(additional channels)
------------------------------	-----------------------

## 6 Output power

Output power, Pout, of the repeater is the mean power of one carrier at maximum repeater gain delivered to a load with resistance equal to the nominal load impedance of the transmitter.

Rated output power, PRAT, of the repeater is the mean power level per carrier at maximum repeater gain that the manufacturer has declared to be available at the antenna connector.

## 6.1 Maximum output power

Maximum output power, Pmax, of the repeater is the mean power level per carrier measured at the antenna connector in specified reference condition.

### 6.1.1 Minimum Requirements

The requirements shall apply at maximum gain, with WCDMA signals in the pass band of the repeater, at levels that produce the maximum rated output power per channel.

When the power of all signals is increased by 10 dB, compared to the power level that produce the maximum rated output power, the requirements shall still be met.

In normal conditions, the Repeater maximum output power shall remain within limits specified in Table 6.1 relative to the manufacturer's rated output power.

Rated output power	Limit
P ≥ 43 dBm	+2 dB and -2 dB
39 ≤ P < 43 dBm	+2 dB and -2 dB
31 ≤ P < 39 dBm	+2 dB and -2 dB
P < 31 dBm	+3 dB and -3 dB

Table 6.1: Repeater output power; normal conditions

In extreme conditions, the Repeater maximum output power shall remain within the limits specified in Table 6.2 relative to the manufacturer's rated output power.

Rated output power	Limit
P ≥ 43 dBm	+2,5 dB and -2,5 dB
39 ≤ P < 43 dBm	+2,5 dB and -2,5 dB
31 ≤ P < 39 dBm	+2,5 dB and -2,5 dB
P < 31 dBm	+4 dB and -4 dB

Table 6.2: Repeater output power; extreme conditions

In certain regions, the minimum requirement for normal conditions may apply also for some conditions outside the ranges of conditions defined as normal.

# 7 Frequency stability

Frequency stability is the ability to maintain the same frequency on the output signal with respect to the input signal.

## 7.1 Minimum requirement

The frequency deviation of the output signal with respect to the input signal shall be no more than  $\pm 0,01$  ppm.

## 8 Out of band gain

Out of band gain refers to the gain of the repeater outside the pass band.

## 8.1 Minimum requirement

The intended use of a repeater in a system is to amplify the in band signals and not to amplify the out of band emission of the donor base station.

In the intended application of the repeater, the out of band gain is less than the donor coupling loss.

The repeater minimum donor coupling loss shall be declared by the manufacturer. This is this the minimum required attenuation between the donor BS and the repeater for proper repeater operation.

The gain outside the pass band shall not exceed the maximum level specified in table 8.1, where:

- f\_offset is the distance from the centre frequency of the first or last 5 MHz channel within the pass band.

Frequency offset from the carrier frequency, f_offset	Maximum gain
2,7 ≤ f_offset < 3,5 MHz	60 dB
3,5 ≤ f_offset < 7,5 MHz	45 dB
7,5 ≤ f_offset < 12,5 MHz	45 dB
12,5 MHz ≤ f_offset	35 dB

Table 8.1: Out of band gain limits 1

For 12,5 MHz  $\leq$  f\_offset the out of band gain shall not exceed the maximum gain of table 8.2 or the maximum gain stated in table 8.1 whichever is lower.

Table	8.2:	Out	of	band	gain	limits	2
-------	------	-----	----	------	------	--------	---

Repeater maximum output power as in 9.1.1.1	Maximum gain		
P < 31 dBm	Out of band gain ≤ minimum donor coupling loss		
31 dBm ≤ P < 43 dBm	Out of band gain ≤ minimum donor coupling loss		
P ≥ 43 dBm	Out of band gain ≤ minimum donor coupling loss - (P-43dBm)		
NOTE 1: The out of band gain is considered with 12,5 MHz $\leq$ f_offset			

# 9 Unwanted emission

Unwanted emissions consist of out-of-band emissions and spurious emissions [1]. Out of band emissions are unwanted emissions immediately outside the pass band bandwidth resulting from the modulation process and non-linearity in the transmitter, but excluding spurious emissions. Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emission, intermodulation products and frequency conversion products, but exclude out of band emissions.

The out-of-band emissions requirement for repeater is specified both in terms operating band unwanted emissions and protection of the BS receiver in the operating band. The Operating band unwanted emissions define all unwanted emissions in the repeater operating band plus the frequency ranges 10 MHz above and 10 MHz below that band. Unwanted emissions outside of this frequency range are limited by a spurious emissions requirement.

## 9.1 Out of band emission

### 9.1.1 Void

### 9.1.2 Operating band unwanted emissions

Operating band unwanted emissions comprise an emission mask applied outside the repeater passband and a general requirement applied outside the mask but inside the frequency range of the operating band unwanted emissions.

The general operating band unwanted emissions limits are given in table 9.0

Та	ble	9.0	0:	General	operating	banc	l unwanted	emiss	sions	requirements
----	-----	-----	----	---------	-----------	------	------------	-------	-------	--------------

Frequency range of operating band	Category A	Category B	Measurement bandwidth	Notes
≤1 GHz	-13 dBm	-16 dBm	100 kHz	1,2
≥1 GHz	-13 dBm	-15 dBm	1 MHz	2,3

NOTE 1: Bandwidth as in ITU-R Recommendation SM.329 [1], s4.1

NOTE 2: Limit based on ITU-R Recommendation SM.329 [1], s4.3 and Annex 7

NOTE 3: Bandwidth as in ITU-R Recommendation SM.329 [1], s4.1. Upper frequency as in ITU-R SM.329 [1], s2.5 table 1

The mask defined in tables 9.1 to 9.4 below may be mandatory in certain regions. In other regions this mask may not be applied.

For regions where this clause applies, the requirement shall be met by a repeater's RF-signal output at maximum gain with WCDMA signals in the pass band of the repeater, at levels that produce the maximum rated output power per channel. The requirements shall also apply at maximum gain without WCDMA signals in the pass band.

Emissions shall not exceed the maximum level specified in tables 9.1 to 9.4 for the appropriate repeater maximum output power, in the frequency range from  $\Delta f = 2,5$  MHz to  $\Delta f_{max}$  from the 5 MHz channel, where:

- $\Delta f$  is the separation between the centre frequency of first or last 5 MHz channel used in the pass band and the nominal -3 dB point of the measuring filter closest to the carrier frequency.
- f\_offset is the separation between the centre frequency of first or last 5 MHz channel in the pass band and the centre of the measuring filter.
- f\_offset<sub>max</sub> is 12,5 MHz.
- $\Delta f_{max}$  is equal to f\_offset<sub>max</sub> minus half of the bandwidth of the measurement filter.

Figure 9.1: Illustrative diagram of emission mask

Frequency offset of measurement filter -3dB point, ∆f	Frequency offset of measurement filter centre frequency, f_offset	Additional requirement	Measurement bandwidth (Note 2)
2.5 MHz ≤ ∆f < 2.6 MHz	2.515MHz ≤ f_offset < 2.615MHz	-13 dBm	30 kHz
$2.6 \text{ MHz} \le \Delta f \le \Delta f_{\text{max}}$	$2.65MHz \le f_offset < f_offset_max$	-13 dBm	100 kHz

In certain regions the following requirement may apply for protection of DTT. For UTRA Repeater operating in Band XX, the level of emissions in the band 470-790 MHz, measured in an 8MHz filter bandwidth on centre frequencies  $F_{filter}$  according to Table 9.4.D, shall not exceed the maximum emission level  $P_{EM,N}$  declared by the manufacturer.

Table 9.4.D: Declared emissions levels for protection of DT
---

Filter centre frequency,	Measurement	Declared emission level
F <sub>filter</sub>	bandwidth	[dBm]
Ffilter = 8*N + 306 (MHz); 21 ≤ N ≤ 60	8 MHz	PEM,N

NOTE: The regional requirement is defined in terms of EIRP (effective isotropic radiated power), which is dependent on both the repeater emissions at the antenna connector and the deployment (including antenna gain and feeder loss). The requirement defined above provides the characteristics of the repeater needed to verify compliance with the regional requirement. Compliance with the regional requirement can be determined using the method outlined in TS 25.104 [6] Annex D.

Note for Tables 9.1, 9.2, 9.3, 9.4, 9.4A, 9.4B and 9.4C:

NOTE 1: This frequency range ensures that the range of values of f\_offset is continuous.

### 9.1.3. Protection of the BS receiver in the operating band

This requirement shall be applied for the protection of UTRA FDD BS receiver in geographic areas in which UTRA-FDD Repeater and UTRA-FDD BS are deployed.

The requirement applies outside the emission mask.

### 9.1.3.1 Minimum Requirement

This requirement applies to the uplink of the repeater, at maximum gain.

The power of any operating band unwanted emission shall not exceed the limits in Table 9.7A.

#### Table 9.7A: Uplink operating band unwanted emissions limits for protection of the BS receiver

Maximum Level	Measurement Bandwidth	Note
-53 dBm	100 kHz	

- NOTE 1: These requirements in Table 9.7A: for the uplink direction of the Repeater reflect what can be achieved with present state of the art technology and are based on a coupling loss of 73 dB between a Repeater and a UTRA FDD BS receiver.
- NOTE 2: The requirements shall be reconsidered when the state of the art technology progresses.
- NOTE 3: The protection of R-GSM is for further study.

### 9.1.4 Co-existence with services in adjacent frequency bands

This requirement may be applied for the protection in bands adjacent to bands I, or VII, as defined in clause 5.1 in geographic areas in which both an adjacent band service and UTRA are deployed.

The requirement applies only to the down-link direction of the repeater.

### 9.1.4.1 Minimum requirement

The power of any spurious emission shall not exceed:

# Table 9.16: UTRA Repeater down-link spurious emissions limits for protection of adjacent band services

Operating Band	Band	Maximum Level	Measurement Bandwidth	Note
l	2100-2105 MHz	-30 + 3.4 (f - 2100 MHz) dBm	1 MHz	
	2175-2180 MHz	-30 + 3.4 (2180 MHz - f) dBm	1 MHz	
VII	2610-2615 MHz	-30 + 3.4 (f - 2610 MHz) dBm	1 MHz	
	2695-2700 MHz	-30 + 3.4 (2700 MHz - f) dBm	1 MHz	

## 9.2 Spurious emissions

Spurious emissions are emissions which are caused by unwanted transmitter effects such as harmonics emission, parasitic emission, intermodulation products and frequency conversion products, but exclude out of band emissions. This is measured at the repeaters RF output port.

The spurious emission limits apply from 9 kHz to 12.75 GHz, excluding the frequency range from 10 MHz below the lowest frequency of the repeaters operating band up to 10 MHz above the highest frequency of the repeaters operating band. Exceptions are the requirement in Table 9.13 and 9.16 that apply also closer than 10 MHz from repeaters operating band.

Unless otherwise stated, all requirements are measured as mean power.

### 9.2.1 General Requirements

The requirements of either subclause 9.2.1.1 or subclause 9.2.1.2 shall apply whatever the type of repeater considered (one or several pass bands). It applies for all configurations foreseen by the manufacturer's specification.

### 9.2.1.1 Minimum Requirement (Category A)

The following requirements shall be met in cases where Category A limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.

At maximum repeater gain, with WCDMA signals in the pass band of the repeater, at levels that produce the maximum rated output power per channel, the power of any spurious emission shall not exceed the limits specified in table 9.5. The requirements shall also apply at maximum gain without WCDMA signals in the pass band.

When the power in all channels is increased by 10 dB, compared to the input level producing the maximum rated output power, the requirement shall still be met.

Table 9.5: Up-link and down-link: General spurious emissions limits, Category A

Band	Maximum level	Measurement Bandwidth	Note
9kHz - 150kHz		1 kHz	Bandwidth as in ITU-R SM.329 [1], s4.1
150kHz - 30MHz	12 dPm	10 kHz	Bandwidth as in ITU-R SM.329 [1], s4.1
30MHz - 1GHz	-13 UDIII	100 kHz	Bandwidth as in ITU-R SM.329 [1], s4.1
1GHz - 12,75 GHz		1 MHz	Upper frequency as in ITU-R SM.329 [1], s2.5 table 1

### 9.2.1.2 Minimum Requirement (Category B)

The following requirements shall be met in cases where Category B limits for spurious emissions, as defined in ITU-R Recommendation SM.329 [1], are applied.

At maximum repeater gain, with WCDMA signals in the pass band of the repeater, at levels that produce the maximum rated power output per channel, the power of any spurious emission shall not exceed the limits specified in table 9.5A for the down- and up-link.

The requirements shall also apply at maximum gain without WCDMA signals in the pass band.

When the power in all channels is increased by 10 dB, compared to the input level producing the maximum rated output power, the requirement shall still be met.

### 9.2.2 Void

### 9.2.3 Co-existence with other systems in the same geographical area

These requirements may be applied for the protection of UE, MS and/or BS operating in other frequency bands in the same geographical area. The requirements may apply in geographic areas in which both UTRA FDD Repeater and a system operating in another frequency band than the FDD operating band are deployed. The system operating in the other frequency band may be GSM900, DCS1800, PCS1900, GSM850, E-UTRA FDD and/or UTRA FDD.

### 9.2.3.1 Minimum Requirements

The power of any spurious emission shall not exceed the limits of Table 9.9 for a UTRA FDD Repeater where requirements for co-existence with the system listed in the first column apply.

### Table 9.9: UTRA Repeater up-link and down-link spurious emissions limits in geographic coverage area of systems operating in other frequency bands

Opperating in the same geographic al area         Description         Description           GSM900         921 - 960 MHz         -57 dBm         100 kHz         This requirement does not apply to UTRA FDD Repeater operating in band VIII           B76 - 915 MHz         -61 dBm         100 kHz         This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band VIII, since it is already covered by the band VIII requirement in sub- clause 9.1.3           DCS1800         1805 - 1880         -47 dBm         100 kHz         This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the band VIII requirement in sub- clause 9.1.3           DCS1800         1805 - 1880         -47 dBm         100 kHz         This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the band UII requirement in sub-clause 9.1.3           PCS1900         1930 - 1990         -47 dBm         100 kHz         This requirement does not apply to the up-link of the UTRA FDD Repeater operating in frequency band II.           1850 - 1910         -61 dBm         100 kHz         This requirement does not apply to the up-link of the UTRA FDD Repeater operating in frequency band II.           05MB60 or CDMA850         669 - 894 MHz         -57 dBm         100 kHz         This requirement does not apply to UTRA FDD Repeater operating in frequency band V.           01TRA FDD Band 10 KHz         2110 - 2170         -52 dBm <td< th=""><th>System</th><th>Band for co-</th><th>Maximum</th><th>Measurement Bandwidth</th><th>Note</th></td<>	System	Band for co-	Maximum	Measurement Bandwidth	Note

E-UTRA Band 7	2500 - 2570 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band VII, since it is already covered by the band VII requirement in sub- clause 9.1.3.
UTRA FDD Band VIII or	925 - 960 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VIII.
E-UTRA Band 8	880 - 915 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band VIII, since it is already covered by the band VIII requirement in sub- clause 9.1.3.
UTRA FDD Band IX or	1844.9 - 1879.9 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band IX.
E-UTRA Band 9	1749. 9 - 1784.9 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band IX, since it is already covered by the band IX requirement in sub- clause 9.1.3.
UTRA FDD Band X or	2110 - 2170 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band X.
E-UTRA Band 10	1710 - 1770 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band X, since it is already covered by the band X requirement in sub-clause 9.1.3.
UTRA FDD Band XI or	1475.9 - 1510.9 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XI or XXI.
XXI or E-UTRA Band 11 or 21	1427.9 - 1462.9 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XI or XXI, since it is already covered by the band XI or XXI requirement in sub-clause 9.1.3.
UTRA FDD Band XII or	728 - 746 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XII.
E-UTRA Band 12	698 - 716 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XII, since it is already covered by the band XII requirement in sub- clause 9.1.3.
UTRA FDD Band XIII or	746 - 756 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XIII.
E-UTRA Band 13	777 - 787 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XIII, since it is already covered by the band XIII requirement in sub- clause 9.1.3.
UTRA FDD Band XIV or	758 - 768 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XIV.
E-UTRA Band 14	788 - 798 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XIV, since it is already covered by the band XIV requirement in sub- clause 9.1.3.
E-UTRA Band 17	734 - 746 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XII.
	704 - 716 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XII, since it is already covered by the band XII requirement in sub- clause 9.1.3.
UTRA FDD Band XX or	791 - 821 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XX.

E-UTRA Band 20	832 - 862 MHz	-49 dBm	1 MHz	This requirement does not apply to the up-link of the UTRA FDD Repeater operating in band XIII, since it is already covered by the band XX requirement in sub- clause 9.1.3.
-------------------	---------------	---------	-------	---

### 9.2.4 Co-existence with co-located and co-sited Base Stations

These requirements may be applied for the protection of other BS receivers when GSM900 and/or DCS1800, PCS1900, GSM850, E-UTRA FDD and/or UTRA FDD BS are co-located with a UTRA FDD Repeater.

### 9.2.4.1 Minimum Requirements

The power of any spurious emission shall not exceed the limits of Table 9.10 for a UTRA FDD Repeater where requirements for co-location with the Base Station listed in the first column apply.

# Table 9.10: UTRA Repeater up-link and down-link spurious emissions limits for Repeater co-locatedwith Base Stations

Type of co- located Base Station	Band for co- location requirement	Maximum Level	Measurement Bandwidth	Note
GSM900	876 - 915 MHz	-98 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band VIII. The requirement of band VIII in sub-clause 9.1.3 applies, but requires a 75dB coupling loss between base station and the repeater UL transmit port.
DCS1800	1710 - 1785 MHz	-98 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band III. The requirement of band III in sub-clause 9.1.3 applies, but requires a 75dB coupling loss between base station and the repeater UL transmit port.
PCS1900	1850 - 1910 MHz	-98 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band II. The requirement of band II in sub-clause 9.1.3 applies, but requires a 75dB coupling loss between base station and the repeater UL transmit port.
GSM850 or CDMA850	824 - 849 MHz	-98 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band V. The requirement of band V in sub-clause 9.1.3 applies, but requires a 75dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band I or E-UTRA Band 1	1920 - 1980 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band I. The requirement of band I in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band II or E-UTRA Band 2	1850 - 1910 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band II. The requirement of band II in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band III or E-UTRA Band 3	1710 - 1785 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band III. The requirement of band III in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band IV or E-UTRA Band 4	1710 - 1755 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band IV. The requirement of band IV in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band V or E-UTRA Band 5	824 - 849 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band V. The requirement of band V in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band VI or XIX or E-UTRA Band 6, 18 or 19	815 - 850 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band VI or XIX. The requirement of band VI or XIX in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band VII or E-UTRA Band 7	2500 - 2570 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band VII. The requirement of band VII in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.

### ETSI TS 125 106 V9.3.1 (2012-08)

UTRA FDD Band VIII or E-UTRA Band 8	880 - 915 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band VIII. The requirement of band VIII in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band IX or E-UTRA Band 9	1749.9 - 1784.9 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band IX. The requirement of band IX in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band X or E-UTRA Band 10	1710 - 1770 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band X. The requirement of band X in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XI or E-UTRA Band 11	1427.9 - 1447.9 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XI or XXI. The requirement of band XI or XXI in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XII or E-UTRA Band 12	698 - 716 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XII. The requirement of band XII in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XIII or E-UTRA Band 13	777 - 787 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XIII. The requirement of band XIII in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XIV or E-UTRA Band 14	788 - 798 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XIV. The requirement of band XIV in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
E-UTRA Band 17	704 - 716 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XII. The requirement of band XII in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XX or E-UTRA Band 20	832 – 862 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XX. The requirement of band XX in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.
UTRA FDD Band XXI or E-UTRA Band 21	1447.9 – 1462.9 MHz	-96 dBm	100 kHz	This requirement does not apply to the up-link of UTRA FDD Repeater operating in band XI or XXI. The requirement of band XI or XXI in sub-clause 9.1.3 applies, but requires a 73dB coupling loss between base station and the repeater UL transmit port.

### 9.2.5 Co-existence with PHS

This requirement may be applied for the protection of PHS in geographic areas in which both PHS and UTRA-FDD Repeaters are deployed. This requirement is also applicable at specified frequencies falling between 12,5 MHz below the centre frequency of the first 5 MHz channel or more than 12,5 MHz above the centre frequency of the last 5 MHz channel in the pass band.

### 9.2.5.1 Minimum Requirement

The power of any spurious emission shall not exceed:

# Table 9.13: UTRA Repeater up-link and down-link spurious emissions limits for in geographic coverage area of PHS

Band	Maximum Level	Measurement Bandwidth	Note
1884,5 - 1915,7 MHz	-41 dBm	300 kHz	

### 9.2.6 Co-existence with UTRA-TDD

### 9.2.6.1 Operation in the same geographic area

This requirement may be applied to geographic areas in which both UTRA-TDD and UTRA-FDD Repeaters are deployed.

#### 9.2.6.1.1 Minimum Requirement

In the down-link direction of the Repeater the power of any spurious emission shall not exceed:

# Table 9.14: UTRA Repeater down-link spurious emissions limits in geographic coverage area of UTRA-TDD

Band	Maximum Level	Measurement Bandwidth	Note
1900 - 1920 MHz	-52 dBm	1 MHz	
2010 - 2025 MHz	-52 dBm	1 MHz	
2570 - 2610 MHz	-52 dBm	1 MHz	

In the up-link direction of the Repeater the power of any spurious emission shall not exceed:

### Table 9.14A: UTRA Repeater up-link spurious emissions limits in geographic coverage area of UTRA-TDD

Band	Maximum	Measurement Bandwidth	Note
1900 - 1920 MHz	-53 dBm	100 kHz	This requirement is applied only to UTRA FDD Repeater operating in band I or II.
1900 - 1920 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band I or II.
2010 - 2025 MHz	-52 dBm	1 MHz	
2570 - 2610 MHz	-53 dBm	100 kHz	This requirement is applied only to UTRA FDD Repeater operating in band VII.
2570 - 2610 MHz	-52 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VII.

- NOTE 1: The requirements of -53dBm/100kHz in Table 9.14A for the up link direction of the Repeater reflect what can be achieved with present state of the art technology and are based on a coupling loss of 73 dB between a Repeater and a UTRA TDD BS receiver.
- NOTE 2: The requirements shall be reconsidered when the state of the art technology progresses.

### 9.2.6.2 Co-located Repeaters and UTRA-TDD base stations

This requirement may be applied for the protection of UTRA-TDD BS receivers when UTRA-TDD BS and UTRA-FDD Repeater are co-located.

### 9.2.6.2.1 Minimum Requirement

In the down-link direction of the Repeater the power of any spurious emission shall not exceed:

### Table 9.15: UTRA Repeater down-link spurious emissions limits for protection of co-located UTRA TDD BS receiver

Band	Maximum Level	Measurement Bandwidth	Note
1900 - 1920 MHz	-86 dBm	1 MHz	
2010 - 2025 MHz	-86 dBm	1 MHz	
2570 - 2610 MHz	-86 dBm	1 MHz	

In the up-link direction of the Repeater the power of any spurious emission shall not exceed:

# Table 9.15A: UTRA Repeater up-link spurious emissions limits for protection of co-located UTRATDD BS receiver

Band	Maximum Level	Measurement Bandwidth	Note
1900 - 1920 MHz	-53 dBm	100 kHz	This requirement is applied only to UTRA FDD Repeater operating in band I or II.
1900 - 1920 MHz	-86 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band I or II.
2010 - 2025 MHz	-83 dBm	100 kHz	This requirement is applied only to UTRA FDD Repeater operating in band I.
2010 - 2025 MHz	-86 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band I
2570 - 2610 MHz	-53 dBm	100 kHz	This requirement is applied only to UTRA FDD Repeater operating in band VII.
2570 - 2610 MHz	-86 dBm	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VII.

- NOTE 1: The requirements of -53dBm/100kHz in Table 9.15A for the up link direction of the Repeater reflect what can be achieved with present state of the art technology and are based on a coupling loss of 73 dB between a Repeater and a UTRA TDD BS receiver.
- NOTE 2: The requirements of -83dBm/100kHz in Table 9.15A for the up link direction of the Repeater reflect what can be achieved with present state of the art technology and are based on a coupling loss of 43 dB between a Repeater and a UTRA TDD BS receiver.
- NOTE 3: The requirements shall be reconsidered when the state of the art technology progresses.

### 9.2.7 Void

## 9.2.8 Protection of public safety operations

This requirement shall be applied to Repeater operating in Bands XIII and XIV to ensure that appropriate interference protection is provided to 700 MHz public safety operations. This requirement is also applicable at specified frequencies falling between 12.5 MHz below the first carrier frequency used and 12.5 MHz above the last carrier frequency used.

### 9.2.8.1 Minimum Requirement

The power of any spurious emission shall not exceed:

# Table 9.16: Spurious emissions limits for the up-link and down-link of UTRA Repeater for protection of public safety operations

Operating Band	Band	Maximum Level	Measurement Bandwidth	Note
XIII	763 - 775 MHz	-46 dBm	6.25 kHz	
XIII	793 - 805 MHz	-46 dBm	6.25 kHz	
XIV	769 - 775 MHz	-46 dBm	6.25 kHz	
XIV	799 - 805 MHz	-46 dBm	6.25 kHz	

# 10 Modulation accuracy

## 10.1 Error Vector Magnitude

The modulation accuracy is defined by the Error Vector Magnitude (EVM), which is a measure of the difference between the theoretical waveform and a modified version of the measured waveform. This difference is called the error vector. The measured waveform is modified by first passing it through a matched root raised cosine filter with bandwidth 3.84 MHz and roll-off  $\alpha$ =0.22. The waveform is then further modified by selecting the frequency, absolute phase, absolute amplitude and chip clock timing so as to minimise the error vector. The EVM result is defined as root of the ratio of the mean error vector power to the mean reference signal power expressed as a %.

The measurement interval is one power control group (timeslot). The repeater shall operate with an ideal WCDMA signal in the pass band of the repeater at a level, which produce the maximum rated output power per channel, as specified by the manufacturer.

### 10.1.1 Minimum requirement

The Error Vector Magnitude shall not be worse than 12,5 %.

## 10.2 Peak code domain error

The peak code domain error is computed by projecting the power of the error vector (as defined in subclause 10.1) onto the code domain at a specified spreading factor. The code domain error for every code in the domain is defined as the ratio of the mean power of the projection onto that code, to the mean power of the composite reference waveform. This ratio is expressed in dB. The peak code domain error is defined as the maximum value for the code domain error for all codes. The measurement interval is one power control group (timeslot).

### 10.2.1 Minimum requirement

The peak code domain error shall not exceed -35 dB at spreading factor 256.

## 10.3 Relative Code Domain Error (RCDE) for 64QAM modulation

The Relative Code Domain Error is computed by projecting the error vector (as defined in 10.1) onto the code domain at a specified spreading factor. Only the active code channels in the composite reference waveform are considered for this requirement. The Relative Code Domain Error for every active code is defined as the ratio of the mean power of the error projection onto that code, to the mean power of the active code in the composite reference waveform. This ratio is expressed in dB. The measurement interval is one frame.

The requirement for Relative Code Domain Error is only applicable for Repeater supporting 64QAM modulated codes.

### 10.3.1 Minimum requirement

The average Relative Code Domain Error for 64QAM modulated codes shall not exceed -21 dB at spreading factor 16.

## 11 Input Intermodulation

The input intermodulation is a measure of the capability of the repeater to inhibit the generation of interference in the pass band, in the presence of interfering signals on frequencies other than the pass band.

## 11.1 General Requirement

The following requirement applies for interfering signals in the frequency bands defined in sub-clause 5.1, depending on the repeaters pass band. The requirement shall bet met with the repeater operating at maximum gain.

### 11.1.1 Minimum requirement

For the parameters specified in table 11.1, the power in the pass band, shall not increase with more than 10 dB at the output of the repeater as measured in the centre of the pass band, compared to the level obtained without interfering signals applied.

The frequency separation between the two interfering signals shall be adjusted so that the  $3^{rd}$  order intermodulation product is positioned in the centre of the pass band.

Table 11.1 specifies the parameters for two interfering signals, where:

- f\_offset is the separation between the centre frequency of first or last 5 MHz channel in the pass band and one the interfering signals.

Table 11.1: Input intermodulation requirement

f_offset	Interfering Signal Levels	Type of signals	Measurement bandwidth
3,5 MHz	-40 dBm	2 CW carriers	1 MHz

## 11.2 Co-location with BS in other systems

The requirement shall bet met with the repeater operating at maximum gain.

# 11.2.1 Minimum requirements - Co-location with GSM900, DCS 1800, PCS1900, GSM850 and/or UTRA FDD

This additional input intermodulation requirement may be applied for the protection of FDD Repeater input when GSM900, DCS1800, PCS1900, GSM850, E-UTRA FDD and/or UTRA FDD BS are co-located with a UTRA FDD Repeater.

For the parameters specified in table 11.2, the power in the pass band shall not increase with more than 10 dB at the output of the repeater as measured in the centre of the pass band, compared to the level obtained without interfering signals applied.

The frequency separation between the two interfering signals shall be adjusted so that the lowest order intermodulation product is positioned in the centre of the pass band.

NOTE 1: The lowest intermodulation products corresponds to the 4<sup>th</sup> and 3<sup>rd</sup> order for the GSM 900 and DCS 1800 bands, respectively.

### Table 11.2: Input intermodulation requirements for interfering signals in other systems

Co-located other	Frequency of interfering	Interfering Signal	Type of signals	Measureme nt bandwidth	Note
GSM900	921 - 960 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
DCS1800	1805 - 1880 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band III, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
PCS1900	1930 - 1990 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band II, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
GSM850 or CDMA850	869 - 894 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band V, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band I or E-UTRA Band 1	2110 - 2170 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band I, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band II or E-UTRA Band 2	1930 - 1990 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band II, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band III or E-UTRA Band 3	1805 - 1880 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band III, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band IV or E-UTRA Band 4	2110 - 2155 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band IV, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band V or E-UTRA Band 5	869 - 894 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band V, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band VI or E-UTRA Band 6	875 - 885 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VI or XIX, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band VII or E-UTRA	2620 - 2690 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VII, since it is already covered by the requirement in

Band 7					sub-clause 11.1, but requires a 86dB
					coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band VIII or E-UTRA Band 8	925 - 960 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band IX or E-UTRA Band 9	1844.9 - 1879.9 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band IX, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band X or E-UTRA Band 10	2110 - 2170 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band X, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XI or E-UTRA Band 11	1475.9 - 1495.9 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XI or XXI, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XII or E-UTRA Band 12	728 - 746 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XII, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XIII or E-UTRA Band 13	746 - 756 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XIII, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XIV or E-UTRA Band 14	758 - 768 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XIV, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
E-UTRA Band 17	734 - 746 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XII, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
E-UTRA Band 18	860 - 875 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VI or XIX, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XIX or E-UTRA Band 19	875 - 890 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VI or XIX, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.
UTRA-FDD Band XX or E-UTRA Band 20	791 - 821 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XX, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the

					repeater DL receive port.
UTRA-FDD Band XXI or E-UTRA Band 21	1495.9 - 1510.9 MHz	+16 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XI or XXI, since it is already covered by the requirement in sub-clause 11.1, but requires a 86dB coupling loss between base station and the repeater DL receive port.

## 11.2.2 Minimum Requirement - Co-location with UTRA-TDD

An additional input intermodulation requirement may be applied for the protection of FDD BS receivers when UTRA TDD is co-located with a UTRA FDD Repeater.

The requirements in this chapter assume a 30 dB coupling loss between transmitter and receiver.

The current state-of-the-art technology does not allow a single generic solution for co-location with UTRA-TDD on adjacent frequencies for 30dB BS-Repeater minimum coupling loss.

However, there are certain site-engineering solutions that can be used. These techniques are addressed in TR 25.942 [5].

#### Table 11.2A: Input intermodulation requirements for interfering signals in UTRA TDD systems

Co-located other	Frequency of	Interfering	Type of signals	Measurement
system	interfering signals	Signal Levels		bandwidth
UTRA-TDD	2585 - 2620 MHz	+16 dBm	2 CW carriers	1 MHz

## 11.3 Co-existence with other systems

The following requirement may be applied when GSM 900, DCS 1800, PCS1900, GSM850, E-UTRA FDD and/or UTRA FDD BS operating in another frequency band and UTRA-FDD Repeaters co-exist. The requirement shall bet met with the repeater operating at maximum gain.

### 11.3.1 Minimum requirements

For the parameters specified in table 11.3, the power in the pass band shall not increase with more than 10 dB at the output of the repeater as measured in the centre of the pass band, compared to the level obtained without interfering signals applied.

The frequency separation between the two interfering signals shall be adjusted so that the lowest order intermodulation product is positioned in the centre of the pass band.

NOTE 1: The lowest intermodulation products corresponds to the 4<sup>th</sup> and 3<sup>rd</sup> order for the GSM 900 and DCS 1800 bands, respectively.

### Table 11.3: Input intermodulation requirements for interfering signals in other systems

Co-existence with other	Frequency of interfering	Interfering Signal	Type of signals	Measurement bandwidth	Note
systems	signals	Levels			
GSM900	876 - 915 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the requirement in sub- clause 11.1.
DCS1800	1710 - 1785 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band III, since it is already covered by the requirement in sub- clause 11.1.
PCS1900	1850 - 1910 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band II, since it is already covered by the requirement in sub- clause 11.1.
GSM850 or CDMA850	824 - 849 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band V, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band I or E-UTRA Band 1	1920 - 1980 MHz	-15 dBm	2 CW carriers	1 MHZ	This requirement does not apply to UTRA FDD Repeater operating in band I, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band II or E-UTRA Band 2	1850 - 1910 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band II, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band III or E-UTRA Band 3	1710 - 1785 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band III, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band IV or E-UTRA Band 4	1710 - 1755 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band IV, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band V or E-UTRA Band 5	824 - 849 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band V, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band VI or E-UTRA Band 6	830 - 840 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VI or XIX, since it is already covered by the requirement in sub-clause 11.1.
UTRA-FDD Band VII or E-UTRA Band 7	2500 - 2570 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VII, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band VIII or E-UTRA Band 8	880 - 915 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band VIII, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band IX or E-UTRA Band 9	1749,9 - 1784,9 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band IX, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band X or E-UTRA Band 10	1710 - 1770 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band X, since it is already covered by the requirement in sub- clause 11.1.
UTRA-FDD Band XI or E-UTRA Band 11	1427.9 - 1447.9 MHz	-15 dBm	2 CW carriers	1 MHz	This requirement does not apply to UTRA FDD Repeater operating in band XI or XXI, since it is already covered by the requirement in sub-clause 11.1.

UTRA-FDD	698 - 716 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XII or			carriers		FDD Repeater operating in band XII, since it
E-UTRA Band					is already covered by the requirement in sub-
12					clause 11.1.
UTRA-FDD	777 - 787 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XIII or			carriers		FDD Repeater operating in band XIII, since it
E-UTRA Band					is already covered by the requirement in sub-
13					clause 11.1.
UTRA-FDD	788 - 798 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XIV or			carriers		FDD Repeater operating in band XIV, since it
E-UTRA Band					is already covered by the requirement in sub-
14					clause 11.1.
E-UTRA Band	704 - 716 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
17			carriers		FDD Repeater operating in band XII, since it
					is already covered by the requirement in sub-
					clause 11.1.
E-UTRA Band	815 - 830 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
18			carriers		FDD Repeater operating in band VI or XIX,
					since it is already covered by the requirement
					in sub-clause 11.1.
UTRA-FDD	830 - 845 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XIX or			carriers		FDD Repeater operating in band VI or XIX,
E-UIRA Band					since it is already covered by the requirement
19					in sub-clause 11.1.
UTRA-FDD	832 - 862 MHz	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XX or			carriers		FDD Repeater operating in band XX, since it
E-UTRA Band					is already covered by the requirement in sub-
20			0.014		clause 11.1.
UTRA-FDD	1447.9 -	-15 dBm	2 CW	1 MHz	This requirement does not apply to UTRA
Band XXI or	14462.9 MHZ		carriers		FUD Repeater operating in band XI or XXI,
E-UIRA Band					since it is already covered by the requirement
21					In sub-clause 11.1.

## 12 Output intermodulation

The output intermodulation requirement is a measure of the ability of the repeater to inhibit the generation of intermodulation products signals created by the presence of an interfering signal reaching the repeater via the output port.

The output intermodulation level is the power of the intermodulation products when a WCDMA modulated interference signal is injected into the output port at a level of 30 dB lower than that of the wanted signal. The frequency of the interference signal shall be  $\pm 5$  MHz,  $\pm 10$  MHz and  $\pm 15$  MHz offset from the wanted signal, but within the frequency band allocated for UTRA FDD downlink as specified in subclause 4.1.

The requirement is applicable for downlink signals.

### 12.1 Minimum requirement

The output intermodulation level shall not exceed the out of band emission or the spurious emission requirements of section 9.1 and 9.2.

# 13 Adjacent Channel Rejection Ratio (ACRR)

## 13.1 Definitions and applicability

Adjacent Channel Rejection Ratio (ACRR) is the ratio of the RRC weighted gain per carrier of the repeater in the pass band to the RRC weighted gain of the repeater on an adjacent channel.

The requirement shall apply to the Uplink and Downlink of Repeater where the donor link is maintained via antennas (over the air Repeater).

# 13.2 Minimum Requirements

In normal conditions the ACRR shall be higher than the value specified in the Table 13.1.

### Table 13.1: Repeater ACRR

Repeater maximum output power as in 9.1.1	Channel offset from the centre frequency of the first or last 5 MHz channel within the pass band.	ACRR limit
P ≥ 31 dBm	5 MHz	33dB
P ≥ 31 dBm	10 MHz	33dB
P < 31 dBm	5 MHz	20dB
P < 31 dBm	10 MHz	20dB
