## 10.3.6.115 E-RGCH Info for Common E-DCH

Includes the configuration for the E-DCH related Relative Grant Channel to be used with common E-DCH in CELL\_FACH and Idle mode. The E-RGCH is using the same channelisation code as configured for the E-HICH channel (see subclause 10.3.6.116).

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Signature Sequence	MD		Integer(0..39)	NOTE1	REL-8
NOTE1: The default value is defined by: Signature Sequence = (offset + common E-DCH resource list position) mod 40 where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero. "common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence.					

## 10.3.6.116 E-HICH Info for Common E-DCH

Includes the configuration for the E-DCH related HARQ Acknowledgement Indicator Channel.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Channelisation Code	CV-Short		Integer (0..127)	If this IE is not present, the value is equal to the last occurrence of this IE.	REL-8
Signature Sequence	MD		Integer (0..39)	NOTE1	REL-8
NOTE1: The default value is defined by: Signature Sequence = (offset + common E-DCH resource list position) mod 40 where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero. "common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence.					

Condition	Explanation
Short	This IE is mandatory present for the first occurrence. Otherwise, this IE is optional.

## 10.3.7 Measurement Information elements

### 10.3.7.1 Additional measurements list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Additional measurements	MP	1 to <MaxAdditionalMeas>		
>Additional measurement identity	MP		Measurement identity 10.3.7.48	

### 10.3.7.2 Cell info

Includes non-frequency related cell info used in the IE "inter-frequency cell info list" and "intra frequency cell info list".

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Cell individual offset	MD		Real(-10..10 by step of 0.5)	In dB Default value is 0 dB Used to offset measured quantity value If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received.	
Reference time difference to cell	OP		Reference time difference to cell 10.3.7.60	In chips. This IE is absent for serving cell. If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.	
Read SFN indicator	MP		Boolean	TRUE indicates that read of SFN is requested for the target cell If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received.	

CHOICE <i>mode</i>	MP

>Remove no frequencies				(no data)	REL-8
New frequencies	OP	1 to <maxNumEUTRAFreqs>			REL-8
>E-UTRA carrier frequency	MP		Integer (0..65535)	EARFCN of the downlink carrier frequency [64]	REL-8
>Measurement Bandwidth	MD		Enumerated (6, 15, 25, 50, 75, 100)	Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, $N_{RB}$ [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6.	REL-8
>Blacklisted cells list	OP	1 to <maxEUTRACellPerFreq>		A list of blacklisted cells can be signalled per frequency	REL-8
>>Physical Cell identity	MP		Integer (0..503)		REL-8

## 10.3.7.6c E-UTRA measured results

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
E-UTRA measured results list	MP	1 to <maxReported EUTRAFreqs>			REL-8
>E-UTRA Carrier Frequency	MP		Integer (0..65535)	EARFCN of the downlink carrier frequency [64]	REL-8
>Measured E-UTRA cells	MP	1 to <maxReported EUTRACellPer Freq>			REL-8
>>Physical Cell Identity	MP		Integer (0..503)		REL-8
>>RSRP	OP		Integer (0..97)	This shall be reported if the 'Inter-RAT measurement quantity' IE is set to "RSRP" or the 'Inter-RAT reporting quantity' IE is set to "both". RSRP is mapped to a value between 0 and 97 [36.133].	REL-8
>>RSRQ	OP		Integer (0..33)	This quantity shall be reported if the 'Inter-RAT measurement quantity' IE is set to "RSRQ" or the 'Inter-RAT reporting quantity' IE is set to "both". RSRQ_00 to RSRQ_33 in [36.133] are mapped to the value between 0 and 33. RSRQ_34 in [36.133] is mapped to the value 33.	REL-8

## 10.3.7.7 Event results

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>event result</i>	MP			One spare value is needed.
>Intra-frequency measurement event results			Intra-frequency measurement event results 10.3.7.37	
>Inter-frequency measurement event results			Inter-frequency measurement event results 10.3.7.17	
>Inter-RAT measurement event results			Inter-RAT measurement event results 10.3.7.28	For IS-2000 results, include fields of the <i>Pilot Strength Measurement Message</i> from subclause 2.7.2.3.2.5 of TIA/EIA/IS-2000.5
>Traffic volume measurement event results			Traffic volume measurement event	

Information Element/Group name	Need	Multi	Type and reference	Semantics description
			results 10.3.7.69	
>Quality measurement event results			Quality measurement event results 10.3.7.57	
>UE internal measurement event results			UE internal measurement event results 10.3.7.78	
>UE positioning measurement event results			UE positioning measurement event results 10.3.7.101	

CHOICE event result	Condition under which the given event result is chosen
Intra-frequency measurement event results	If measurement type = intra-frequency measurement
Inter-frequency measurement event results	If measurement type = inter-frequency measurement
Inter-RAT measurement event results	If measurement type = inter-RAT measurement
Traffic volume measurement event results	If measurement type = traffic volume measurement
Quality measurement event results	If measurement type = Quality measurement
UE internal measurement event results	If measurement type = UE internal measurement
UE positioning measurement event results	If measurement type = UE positioning measurement

### 10.3.7.8 FACH measurement occasion info

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
FACH Measurement occasion cycle length coefficient	OP		Integer(1..12)		
Inter-frequency FDD measurement indicator	MP		Boolean	TRUE means that measurements are required	
Inter-frequency TDD 3.84 Mcps measurement indicator	MP		Boolean	TRUE means that measurements are required	REL-4
Inter-frequency TDD 7.68 Mcps measurement indicator	MP		Boolean	TRUE means that measurements are required	REL-7
Inter-frequency TDD 1.28 Mcps measurement indicator	MP		Boolean	TRUE means that measurements are required	REL-4
Inter-RAT measurement indicators	OP	1 to <maxOther RAT>			
>RAT type	MP		Enumerated(GSM, IS2000)		

## 10.3.7.9 Filter coefficient

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Filter coefficient	MP		Integer(0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 13, 15, 17, 19)	Default value is 0

## 10.3.7.9a GSM cell group

This IE encodes a list of GSM cells specified by their ARFCN values [45].

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Starting ARFCN	MP		Integer (0..1023)	First ARFCN value in the set	REL-8
Band Indicator	MP		Enumerated (dcs1800, pcs1900)	GSM BAND_INDICATOR [45]	REL-8
CHOICE <i>Following ARFCNs</i>	MP				REL-8
>Explicit list					REL-8
>>List of ARFCNs	MP	0 to 31	Integer (0..1023)	Following ARFCN values	REL-8
>Equally spaced					REL-8
>>ARFCN spacing	MP		Integer (1..8)	Increment "d" ARFCN values	REL-8
>>Number of following ARFCNs	MP		Integer (0..31)	Number "n" of following ARFCN values, NOTE 1	REL-8
>Variable bitmap format					REL-8
>>Bitmap	MP		Octet string (1..16)	NOTE 2	REL-8
>Continuous range					REL-8
>>Ending ARFCN	MP		Integer (0..1023)	Last ARFCN value in the set, NOTE 3	REL-8
NOTE 1: Let the IE "Starting ARFCN" = s. The complete set of (n+1) ARFCN values is defined as: {s, ((s + d) mod 1024), ((s + 2*d) mod 1024) ... ((s + n*d) mod 1024)}.					
NOTE 2: Bitmap representing the following ARFCN values in the set. Let the IE "Starting ARFCN" = s. The first bit of the first octet in the bitmap corresponds to ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the last bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to "1".					
NOTE 3: Let the IEs "Starting ARFCN" = s and "Ending ARFCN" = t. The complete set of ARFCN values is defined as: {s, ((s + 1) mod 1024), ((s + 2) mod 1024) ... ((t - 1) mod 1024), t}.					

## 10.3.7.10 HCS Cell re-selection information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Penalty_time	MD		Integer(0, 10, 20, 30, 40, 50, 60)	Default value is 0 which means = not used In seconds
Temporary_offsets	<i>CV-Penalty used</i>			
>Temporary_offset1	MP		Integer(3, 6, 9, 12, 15, 18, 21, inf)	[dB]
>Temporary_offset2	<i>CV-FDD-Quality-Measure</i>		Integer(2, 3, 4, 6, 8, 10, 12, inf)	[dB]

Condition	Explanation
<i>Penalty used</i>	This IE is not needed if the IE "Penalty time" equals "not used", else it is mandatory present.
<i>FDD-Quality-Measure</i>	This IE is not needed if the IE "Cell selection and reselection quality measure" has the value CPICH RSCP, otherwise the IE is mandatory present. This conditional presence is implemented in ASN.1 by the use of a specific RSCP and EcN0 variant of 10.3.7.10.

## 10.3.7.11 HCS neighbouring cell information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
HCS_PRIO	MD		Integer (0..7)	Default value = 0
Qhcs	MD		Qhcs 10.3.7.54a	Default value = 0
HCS Cell Re-selection Information	MP		HCS Cell Re-selection Information 10.3.7.10	

## 10.3.7.12 HCS Serving cell information

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
HCS_PRIO	MD		Integer (0..7)	Default value = 0
Qhcs	MD		Qhcs 10.3.7.54a	Default value = 0
T <sub>CRmax</sub>	MD		Enumerated(not used, 30, 60, 120, 180, 240)	[s] Default value is not used
N <sub>CR</sub>	<i>CV-UE speed detector</i>		Integer(1..16)	Default value = 8
T <sub>CrmaxHyst</sub>	<i>CV-UE speed detector</i>		Enumerated(not used, 10, 20, 30, 40, 50, 60, 70)	[s]

Condition	Explanation
<i>UE Speed detector</i>	This IE is not needed if T <sub>CRmax</sub> equals 'not used', else it is mandatory present.

### 10.3.7.12a Idle Interval Information

NOTE: Used for TDD only. If the multi-RAT UE needs idle interval for E-UTRAN measurements in CELL\_DCH state, this IE may be configured.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
k	MD		Integer (2..3)	This IE is the coefficient parameter to calculate the idle interval period. Default value is 2. The actual idle interval period equal to $2^k$ radio frames.	REL-8
Offset	MD		Integer (0..7)	The idle interval position in the period. Default value is 0.	REL-8

### 10.3.7.13 Inter-frequency cell info list

Contains the information for the list of measurement objects for an inter-frequency measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>Inter-frequency cell removal</i>	OP				
>Remove all inter-frequency cells				No data	
>Remove some inter-frequency cells					
>>Removed inter-frequency cells	MP	1 .. <maxCellMeas>			
>>>Inter-frequency cell id	MP		Integer(0 .. <maxCellMeas>-1)		
>No inter-frequency cells removed				No data	
New inter-frequency cells	OP	1 to <maxCellMeas>			
>Inter-frequency cell id	MD		Integer(0 .. <maxCellMeas>-1)		
>Frequency info	MD		Frequency info 10.3.6.36	Default value is the value of the previous "frequency info" in the list. NOTE: The first occurrence is then MP.	
>Cell info	MP		Cell info 10.3.7.2		
>CHOICE <i>mode specific info</i>	MP				REL-7
>>No information				No data for FDD, TDD 3.84 Mcps or TDD 7.68 Mcps	REL-7
>>>TDD 1.28 Mcps					REL-7
>>>>Intra-SecondaryFrequency Indicator	MP		Boolean	TRUE means the inter frequency neighbour cell has a secondary frequency which is the same as the current working frequency of UE.	REL-7
Cells for measurement	CV- <i>BCHopt</i>	1 to <maxCellMeas>			
>Inter-frequency cell id	MP		Integer(0 .. <maxCellMeas>-1)		

Condition	Explanation
<i>BCHopt</i>	This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional

## 10.3.7.14 Inter-frequency event identity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-frequency event identity	MP		Enumerated(2a, 2b, 2c, 2d, 2e, 2f)	Two spare values are needed.

## 10.3.7.15 Inter-frequency measured results list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-frequency measurement results	OP	1 to <maxFreq>		
>Frequency info	MD		Frequency info 10.3.6.36	Default value is the value of the previous "frequency info" in the list. NOTE: The first occurrence is then MP.
>UTRA carrier RSSI	OP		Integer(0..76 )	According to UTRA_carrier_RSSI_LEV in [19] and [20]. Fifty-one spare values are needed.
>Inter-frequency cell measurement results	OP	1 to <maxCellMeas>		Only cells for which all reporting quantities are available should be included.
>>Cell measured results	MP		Cell measured results 10.3.7.3	

## 10.3.7.16 Inter-frequency measurement

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Inter-frequency measurement objects list	MP		Inter-frequency cell info list 10.3.7.13		
Inter-frequency measurement quantity	OP		Inter-frequency measurement quantity 10.3.7.18		
Inter-frequency reporting quantity	OP		Inter-frequency reporting quantity 10.3.7.21		
Reporting cell status	CV-reporting		Reporting cell status 10.3.7.61		
Measurement validity	OP		Measurement validity 10.3.7.51		
Inter-frequency set update	OP		Inter-frequency set update 10.3.7.22		
Adjacent frequency index	OP		Integer (0..<maxCellMeas-1>)	Index to an element in the IE 'New inter-frequency cell' containing a cell on	REL-8

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
				the adjacent frequency; index = 0 corresponds to the first element in the IE	
CHOICE <i>report criteria</i>	MP				
>Intra-frequency measurement reporting criteria			Intra-frequency measurement reporting criteria 10.3.7.39		
>Inter-frequency measurement reporting criteria			Inter-frequency measurement reporting criteria 10.3.7.19		
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53		
>No reporting				(no data) Chosen when this measurement only is used as additional measurement to another measurement	

Condition	Explanation
<i>reporting</i>	This IE is optional if the CHOICE " <i>report criteria</i> " is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed

### 10.3.7.17 Inter-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for inter-frequency measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-frequency event identity	MP		Inter-frequency event identity 10.3.7.14	
Inter-frequency cells	OP	1 to <maxFreq>		
>Frequency info	MP		Frequency info 10.3.6.36	
>Non frequency related measurement event results	MP		Cell measurement event results 10.3.7.4	

### 10.3.7.18 Inter-frequency measurement quantity

The quantity the UE shall measure in case of inter-frequency measurement. It also includes the filtering of the measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>reporting criteria</i>	MP			
>Intra-frequency reporting criteria				
>>Intra-frequency measurement quantity	MP		Intra-frequency measurement quantity 10.3.7.38	
>Inter-frequency reporting criteria				
>>Filter coefficient	MP		Filter coefficient 10.3.7.9	
>>>CHOICE <i>mode</i>	MP			
>>>>FDD				
>>>>>Measurement quantity for frequency quality estimate	MP		Enumerated(CPICH Ec/N0, CPICH RSCP)	
>>>>>TDD				
>>>>>>Measurement quantity for frequency quality estimate	MP		Enumerated(Primary CCPCH RSCP)	

### 10.3.7.19 Inter-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an inter-frequency measurements. All events concerning inter-frequency measurements are labelled 2x where x is a,b,c, ...

Event 2a: Change of best frequency.

Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

Event 2c: The estimated quality of a non-used frequency is above a certain threshold.

Event 2d: The estimated quality of the currently used frequency is below a certain threshold.

Event 2e: The estimated quality of a non-used frequency is below a certain threshold.

Event 2f: The estimated quality of the currently used frequency is above a certain threshold.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Parameters required for each event	OP	1 to <maxMeasEvent>			
>Inter-frequency event identity	MP		Inter-frequency event identity 10.3.7.14		
>Threshold used frequency	CV- <i>clause 0</i>		Integer(-115..0)	Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -115..-25dBm	
			Integer (-120..0)	Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -120..-25dBm	REL-6
>Delta <sub>Threshold used frequency</sub>	CV- <i>clause 3</i>		Integer(-5..-1)	If present, the actual value of Threshold used frequency = Threshold used frequency + Delta <sub>Threshold used frequency</sub>	REL-5
				Not used in Release 6 and later	REL-6
>W used frequency	CV- <i>clause 2</i>		Real(0, 0.1..2.0 by step of 0.1)		
>Hysteresis	MP		Real(0, 0.5..14.5 by step of 0.5)	In event 2a, 2b, 2c, 2d, 2e, 2f	
>Time to trigger	MP		Time to trigger 10.3.7.64	Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms.	
>Reporting cell status	OP		Reporting cell status 10.3.7.61		
>Parameters required for each non-used frequency	OP	1 to <maxFreq>		In this release, the first listed threshold and W parameter shall apply to all non-used frequencies.	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>>Threshold non used frequency	CV- <i>clause 1</i>		Integer(-115..0)	Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -115..-25dBm. This IE is not needed if the IE "Inter-frequency event identity" is set to 2a. However, it is specified to be mandatory to align with the ASN.1.	
			Integer (-120..0)	Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -120..-25dBm This IE is not needed if the IE "Inter-frequency event identity" is set to 2a.	REL-6
>> Delta <sub>Threshold non used frequency</sub>	CV- <i>clause 4</i>		Integer(-5..-1)	If present, the actual value of Threshold non used frequency = Threshold non used frequency + Delta <sub>Threshold non used frequency</sub>	REL-5
				Not used in Release 6 and later	REL-6
>>W non-used frequency	CV- <i>clause 1</i>		Real(0, 0.1..2.0 by step of 0.1)		

Condition	Explanation
<i>Clause 0</i>	This IE is mandatory present if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f, otherwise the IE is not needed.
<i>Clause 1</i>	This IE is mandatory present if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e, otherwise the IE is not needed
<i>Clause 2</i>	This IE is mandatory present if the IE "Inter-frequency event identity" is set to 2a, 2b, 2d or 2f, otherwise the IE is not needed.
<i>Clause 3</i>	This IE is optional if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f. Otherwise the IE is not needed. Note that in order to align with the ASN.1, this IE is always included when the IE 'Delta <sub>Threshold non used frequency</sub> ' is present, but the value shall be ignored if the "Inter-frequency event identity" is not set to 2b, 2d or 2f.
<i>Clause 4</i>	This IE is optional if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e. Otherwise the IE is not needed.

## 10.3.7.20 Inter-frequency measurement system information

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Inter-frequency cell info list	OP		Inter-frequency cell info list 10.3.7.13		
Inter-frequency RACH reporting information	OP		Inter-frequency RACH reporting information 10.3.7.20a		REL-6

## 10.3.7.20a Inter-frequency RACH reporting information

Contains the reporting configuration information for an inter-frequency measurement report, which is sent on the RACH.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>mode</i>	MP				REL-6
>FDD					REL-6

>>> Inter-frequency RACH reporting quantity	MP		Enumerated(Primary CCPCH RSCP)		REL-6
Inter-frequency RACH reporting threshold	MP		Integer(-115..0)	Ranges used depend on measurement quantity. CPICH Ec/No - 24..0dB CPICH/Primary CCPCH RSCP - 115..-25dBm.	REL-6
Maximum number of inter-frequency RACH reporting cells	MP		Integer(1..8)	Indicates the total number for all non-used frequencies	REL-6

## 10.3.7.21 Inter-frequency reporting quantity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UTRA Carrier RSSI	MP		Boolean	TRUE means report is requested.
Frequency quality estimate	MP		Boolean	TRUE means that report is requested. This parameter is not used in this release and should be set to FALSE. It shall be ignored by the UE.
Non frequency related cell reporting quantities	MP		Cell reporting quantities 10.3.7.5	

### 10.3.7.22 Inter-frequency SET UPDATE

NOTE 1: Only for FDD.

This information makes it possible to use events defined for Intra-frequency measurement within the same non-used frequency for Inter-frequency measurement reporting criteria.

Information Element/group name	Need	Multi	Type and reference	Semantics description
UE autonomous update mode	MP		Enumerated (On with no reporting)	Required for backwards compatibility with a UE not supporting this revision of the standard

### 10.3.7.23 Inter-RAT cell info list

Contains the information for the list of measurement objects for an inter-RAT measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>Inter-RAT cell removal</i>	MP				
>Remove all inter-RAT cells				(no data)	
>Remove some inter-RAT cells					
>>Removed inter-RAT cells	MP	1 to <maxCellMeas>			
>>>Inter-RAT cell id	MP		Integer(0 .. <maxCellMeas> - 1)		
>Remove no inter-RAT cells				(no data)	
New inter-RAT cells	MP	1 to <maxCellMeas>		Although this IE is not always required, need is MP to align with ASN.1	
	OP				REL-4
>Inter-RAT cell id	OP		Integer(0 .. <maxCellMeas> - 1)		
>CHOICE <i>Radio Access Technology</i>	MP				
>>GSM					
>>>Cell individual offset	MP		Integer (-50..50)	In dB Used to offset measured quantity value	
>>>Cell selection and re-selection info	OP		Cell selection and re-selection info for SIB11/12 10.3.2.4	See subclause 8.6.7.3	
>>>BSIC	MP		BSIC 10.3.8.2		
>>>Band indicator	MP		Enumerated (DCS 1800 band used, PCS 1900 band used)	Indicates how to interpret the BCCH ARFCN	
>>>BCCH ARFCN	MP		Integer (0..1023)	[45]	
>>IS-2000					
>>>System specific measurement info	MP		enumerated (frequency, timeslot,	For IS-2000, use fields from TIA/EIA/IS-	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
			colour code, output power, PN offset)	2000.5, subclause 3.7.3.3.2.27, <i>Candidate Frequency Neighbour List Message</i>	
>>None			(no data)	This value has been introduced to handle the case when IE "New inter-RAT cells" is not required	
Cell for measurement	OP	1 to <maxCellMeas>			
>Inter-RAT cell id	MP		Integer(0 .. <maxCellMeas>-1)		
Inter-RAT cell info indication	CV- <i>Message</i>		Integer (0..3)	NOTE 1 and 2	REL-5

Condition	Explanation
<i>Message</i>	The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed.

NOTE 1: The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

NOTE 2: In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

NOTE 3: If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

### 10.3.7.24 Inter-RAT event identity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT event identity	MP		Enumerated (3a, 3b, 3c, 3d)	

### 10.3.7.25 Inter-RAT info

Inter-RAT info defines the target system for redirected cell selection.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Inter-RAT info	MP		Enumerated (GSM, E-UTRA)		REL-8
GSM target cell info	CV-GSM		GSM target cell info 10.3.8.4g		REL-6
E-UTRA target info	CV-E-UTRA		E-UTRA target info 10.3.8.4L		REL-8

Condition	Explanation
GSM	This IE is optionally present if the IE "Inter-RAT info" is set to "GSM" and not needed otherwise.
E-UTRA	This IE is mandatory present if the IE "Inter-RAT info" is set to "E-UTRA" and not needed otherwise.

### 10.3.7.26 Inter-RAT measured results list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT measurement results	OP	1 to <maxOther RAT-16>		
>CHOICE <i>system</i>	MP			One spare value is needed.
>>GSM				
>>>Measured GSM cells	MP	1 to <maxReportedGSMCells>		
>>>>GSM carrier RSSI	OP		bit string(6)	RXLEV is mapped to a value between 0 and 63, [46]. When mapping the RXLEV value to the RSSI bit string, the first/leftmost bit of the bit string contains the most significant bit.
>>>>CHOICE <i>BSIC</i>	MP			
>>>>>Verified BSIC				
>>>>>>inter-RAT cell id	MP		Integer(0..<maxCellMeasurements>-1)	
>>>>>>>Non verified BSIC				
>>>>>>>>BCCH ARFCN	MP		Integer (0..1023)	[45]

## 10.3.7.27 Inter-RAT measurement

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>Inter-RAT measurement objects</i>	OP				REL-8
>Inter-RAT cell info list	MP		Inter-RAT cell info list 10.3.7.23		
>E-UTRA frequency list	MP		E-UTRA frequency list 10.3.7.6b		REL-8
Inter-RAT measurement quantity	OP		Inter-RAT measurement quantity 10.3.7.29		
Inter-RAT reporting quantity	OP		Inter-RAT reporting quantity 10.3.7.32		
Reporting cell status	CV-reporting		Reporting cell status 10.3.7.61		
CHOICE <i>report criteria</i>	MP				
>Inter-RAT measurement reporting criteria			Inter-RAT measurement reporting criteria 10.3.7.30		
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53		
>No reporting				(no data) Chosen when this measurement only is used as additional measurement to another measurement	
Idle Interval Information	OP		Idle Interval Information 10.3.7.12a	This IE is used for TDD only.	REL-8

Condition	Explanation
<i>reporting</i>	This IE is optional if the CHOICE " <i>report criteria</i> " is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed

## 10.3.7.28 Inter-RAT measurement event results

This IE contains the measurement event results that are reported to UTRAN for inter-RAT measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT event identity	MP		Inter-RAT event identity 10.3.7.24	
Cells to report	MP	1 to <maxCellMeas>		
>CHOICE BSIC	MP			
>>Verified BSIC				
>>>inter-RAT cell id	MP		Integer(0..<maxCellMeas>-1)	
>>Non verified BSIC				
>>>BCCH ARFCN	MP		Integer (0..1023)	[45]

### 10.3.7.29 Inter-RAT measurement quantity

The quantity the UE shall measure in case of inter-RAT measurement. It also includes the filtering of the measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Measurement quantity for UTRAN quality estimate	OP		Intra-frequency measurement quantity 10.3.7.38		
CHOICE <i>system</i>	MP				
>GSM					
>>Measurement quantity	MP		Enumerated (GSM Carrier RSSI)		
>>Filter coefficient	MP		Filter coefficient 10.3.7.9		
>>BSIC verification required	MP		Enumerated (required, not required)		
>IS2000					
>>TADD $E_c/I_0$	MP		Integer (0..63)	Admission criteria for neighbours, see subclause 2.6.6.2.6 of TIA/EIA/IS-2000.5	
>>TCOMP $E_c/I_0$	MP		Integer (0..15)	Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>>SOFT SLOPE	OP		Integer (0..63)	Admission criteria for neighbours, see subclause 2.6.6.2.3 and 2.6.6.2.5.2 of TIA/EIA/IS-2000.5	
>>ADD_INTERCEPT	OP		Integer (0..63)	Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5	
>E-UTRA					REL-8
>>Measurement quantity	MP		Enumerated (RSRP, RSRQ)	This IE indicates the quantity that the UE uses to determine the event trigger.	REL-8
>>Filter coefficient	MP		Filter coefficient 10.3.7.9		REL-8

### 10.3.7.30 Inter-RAT measurement reporting criteria

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of other system is below a certain threshold.

Event 3c: The estimated quality of other system is above a certain threshold.

Event 3d: Change of best cell in other system.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Parameters required for each event	OP	1 to <maxMeas Event>		
>Inter-RAT event identity	MP		Inter-RAT event identity 10.3.7.24	
>Threshold own system	CV-clause 0		Integer (-115..0)	
>W	CV-clause 0		Real(0, 0.1..2.0 by step of 0.1)	In event 3a
>Threshold other system	CV-clause 1		Integer (-115..0)	In event 3a, 3b, 3c If the other system is EUTRA, the range used depends on: if measurement quantity is RSRQ, range should be (-39..-6), the actual value = Threshold other system/2 [dB], if measurement quantity is RSRP, range should be (-115..-19), the actual value = Threshold other system - 25 [dBm].
>Hysteresis	MP		Real(0..7.5 by step of 0.5)	
>Time to trigger	MP		Time to trigger 10.3.7.64	Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report.
>Reporting cell status	OP		Reporting cell status 10.3.7.61	

Condition	Explanation
Clause 0	The IE is mandatory present if the IE "Inter-RAT event identity" is set to "3a", otherwise the IE is not needed
Clause 1	The IE is mandatory present if the IE "Inter-RAT event identity" is set to 3a, 3b or 3c, otherwise the IE is not needed

### 10.3.7.31 Inter-RAT measurement system information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT cell info list	OP		Inter-RAT cell info list 10.3.7.23	

### 10.3.7.32 Inter-RAT reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UTRAN estimated quality	MP		Boolean	This parameter is not used in this release and should be set to FALSE.	
CHOICE <i>system</i>	MP				
>GSM					
>>GSM Carrier RSSI Reporting indicator	MP		Boolean		
>E-UTRA					REL-8
>>Reporting quantity	MP		Enumerated ("measurement quantity", "both")	This IE indicates the quantity that the UE reports; if this IE is set to "measurement quantity" the UE reports either RSRP or RSRQ which is indicated in the 'measurement quantity' (see subclause 10.3.7.29); if this IE is set to "both", the UE reports both RSRP and RSRQ.	REL-8

### 10.3.7.33 Intra-frequency cell info list

Contains the information for the list of measurement objects for an intra-frequency measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>Intra-frequency cell removal</i>	OP			Absence of this IE is equivalent to choice "Remove no intra-frequency cells".
>Remove all intra-frequency cells				(no data)
>Remove some intra-frequency cells				
>>Removed intra-frequency cells	MP	1 to <maxCellMeas>		
>>>Intra-frequency cell id	MP		Integer(0 .. <maxCellMeas> - 1)	
>Remove no intra-frequency cells				(no data)
New intra-frequency cells	OP	1 to <maxCellMeas>		This information element must be present when "Intra-frequency cell info list" is included in the system information
>Intra-frequency cell id	OP		Integer(0 .. <maxCellMeas> - 1)	
>Cell info	MP		Cell info 10.3.7.2	This IE must be included for the serving cell when the IE "Intra frequency cell info list" is included in System Information Block type 11.
Cells for measurement	CV- <i>BCHopt</i>	1 to <maxCellMeas>		
>Intra-frequency cell id	MP		Integer(0 .. <maxCellMeas>-1)	

Condition	Explanation
<i>BCHopt</i>	This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional

## 10.3.7.34 Intra-frequency event identity

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Intra-frequency event identity	MP		Enumerated (1a,1b,1c,1d,1e,1f,1g,1h,1i,	Seven spare values are needed.	REL-6
			1j)	Six spare values are needed.	

## 10.3.7.35 Intra-frequency measured results list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Intra-frequency measurement results	OP	1 to <maxCellMeas>		
>Cell measured results	MP		Cell measured results 10.3.7.3	Only cells for which all reporting quantities are available should be included.

## 10.3.7.36 Intra-frequency measurement

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Intra-frequency measurement objects list	OP		Intra-frequency cell info list 10.3.7.33		
Intra-frequency measurement quantity	OP		Intra-frequency measurement quantity 10.3.7.38		
Intra-frequency reporting quantity	OP		Intra-frequency reporting quantity 10.3.7.41		
Reporting cell status	CV-reporting		Reporting cell status 10.3.7.61		
Measurement validity	OP		Measurement validity 10.3.7.51		
CHOICE <i>report criteria</i>	OP			NOTE 1	REL-6
	MP				REL-7
	OP				
>Intra-frequency measurement reporting criteria			Intra-frequency measurement reporting criteria 10.3.7.39		

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53		
>No reporting				(no data) Chosen when this measurement only is used as additional measurement to another measurement	

Condition	Explanation
<i>reporting</i>	This IE is optional if the CHOICE " <i>report criteria</i> " is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed

NOTE 1: The IE "report criteria" is optional in all releases except Rel-6. In Rel-6 the IE "report criteria" is mandatory present in order to align the tabular format with the Rel-6 ASN.1.

### 10.3.7.37 Intra-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for intra-frequency measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Intra-frequency event identity	MP		Intra-frequency event identity 10.3.7.34	
Cell measurement event results	MP		Cell measurement event results 10.3.7.4	

### 10.3.7.38 Intra-frequency measurement quantity

The quantity the UE shall measure in case of intra-frequency measurement. It also includes the filtering of the measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Filter coefficient	MP		Filter coefficient 10.3.7.9	
CHOICE <i>mode</i>	MP			
>FDD				
>>Measurement quantity	MP		Enumerated(CPICH Ec/N0, CPICH RSCP, Pathloss)	
>TDD				
>>Measurement quantity list	MP	1 to 4		

Information Element/Group name	Need	Multi	Type and reference	Semantics description
>>>Measurement quantity	MP		Enumerated( Primary CCPCH RSCP, Pathloss, Timeslot ISCP)	

### 10.3.7.39 Intra-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an intra-frequency measurement. All events concerning intra-frequency measurements are labelled 1x where x is a, b, c....

Event 1a: A Primary CPICH enters the Reporting Range (FDD only).

Event 1b: A Primary CPICH leaves the Reporting Range (FDD only).

Event 1c: A Non-active Primary CPICH becomes better than an active Primary CPICH (FDD only).

Event 1d: Change of best cell (FDD only).

Event 1e: A Primary CPICH becomes better than an absolute threshold (FDD only).

Event 1f: A Primary CPICH becomes worse than an absolute threshold (FDD only).

Event 1g: Change of best cell in TDD.

Event 1h: Timeslot ISCP below a certain threshold (TDD only).

Event 1i: Timeslot ISCP above a certain threshold (TDD only).

Event 1j: A Non-active E-DCH but active DCH Primary CPICH becomes better than an active E-DCH Primary CPICH (FDD only).

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Parameters required for each event	OP	1 to <maxMeasEvent>			
>Intra-frequency event identity	MP		Intra-frequency event identity 10.3.7.34		
>Triggering condition 1	CV- <i>clause 0</i>		Enumerated(Active set cells, Monitored set cells, Active set cells and monitored set cells)	Indicates which cells can trigger the event	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>Triggering condition 2	CV- <i>clause 6</i>		Enumerated(Active set cells, Monitored set cells, Active set cells and monitored set cells, Detected set cells, Detected set cells and monitored set cells)	Indicates which cells can trigger the event	REL-5
	CV- <i>clause 10</i>				
>Reporting Range Constant	CV- <i>clause 2</i>		Real(0..14.5 by step of 0.5)	In dB. In event 1a,1b.	
>Cells forbidden to affect Reporting range	CV- <i>clause 1</i>	1 to <maxCellMeas>		In event 1a,1b

>Hysteresis	MP		Real(0..7.5 by step of 0.5)	In dB.	
>Threshold used frequency	CV- <i>clause 3</i>		Integer (-115..165)	Range used depend on measurement quantity. CPICH RSCP -115..-25 dBm CPICH Ec/No -24..0 dB Pathloss 30..165dB ISCP -115..-25 dBm	REL-6
			Integer (-120..165)	Range used depend on measurement quantity. CPICH RSCP -120..-25 dBm CPICH Ec/No -24..0 dB Pathloss 30..165dB ISCP -120..-25 dBm	
>Delta <sub>Threshold used frequency</sub>	CV- <i>clause 8</i>		Integer(-5..-1)	If present, the actual value of Threshold used frequency = Threshold used frequency + Delta <sub>Threshold used frequency</sub>	REL-5
				Not used in Release 6 and later	REL-6
>Reporting deactivation threshold	CV- <i>clause 4</i>		Integer(0, 1, 2, 3, 4, 5, 6, 7)	In event 1a Indicates the maximum number of cells allowed	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
				in the active set in order for event 1a to occur. 0 means not applicable	
>Replacement activation threshold	CV- clause 5		Integer(0, 1, 2, 3, 4, 5, 6, 7)	In event 1c Indicates the minimum number of cells allowed in the active set in order for event 1c to occur. 0 means not applicable	REL-6
				In event 1j Indicates the minimum number of cells allowed in the E-DCH active set in order for event 1j to occur. For event 1j values 5, 6 and 7 are not applicable. 0 means not applicable	
>Time to trigger	MP		Time to trigger 10.3.7.64	Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms	
>Amount of reporting	CV- clause 7		Integer(1, 2, 4, 8, 16, 32, 64, Infinity)	In case the IE "Intra-frequency reporting criteria" is included in the IE "Inter-frequency measurement", this IE is not needed.	
>Reporting interval	CV- clause 7		Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000)	Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds. 0 means no periodical reporting. In case the IE "Intra-frequency reporting criteria" is included in the IE "Inter-frequency measurement", this IE is not needed.	
>Reporting cell status	OP		Reporting cell status 10.3.7.61		
>Periodical reporting information-1b	CV- clause 9		Periodical reporting info-1b 10.3.7.53 aa	In case the IE "Intra-frequency reporting criteria" is included in the IE "Inter-frequency measurement", this IE is not needed.	REL-5
>Use CIO	CV- clause 10		Boolean	TRUE indicates that the cell individual offset shall be used for event evaluation	REL-5

Condition	Explanation
Clause 0	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1b" or "1f", otherwise the IE is not needed.
Clause 1	The IE is optional if the IE "Intra-frequency event identity" is set to "1a" or "1b", otherwise the IE is not needed.
Clause 2	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1a" or "1b", otherwise the IE is not needed.
Clause 3	The IE is mandatory present if the IE "Intra-frequency event identity" is set to , "1e", "1f", "1h" or "1i", otherwise the IE is not needed.
Clause 4	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1a", otherwise the IE is not needed.
Clause 5	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1c" or 1j , otherwise the IE is not needed.
Clause 6	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1a" or "1e", otherwise the IE is not needed.
Clause 7	The IE is mandatory present if the IE "Intra-frequency event identity" is set to "1a", "1c" or 1j, otherwise the IE is not needed.
Clause 8	The IE is optional if the IE "Intra-frequency event identity" is set to "1e", "1f", "1h" or "1i". Otherwise the IE is not needed.
Clause 9	The IE is optional if the IE "Intra-frequency event identity" is set to "1b", otherwise the IE is not needed.
Clause 10	The IE is optional if the IE "Intra-frequency event identity" is set to "1d", otherwise the IE is not needed.

#### 10.3.7.40 Intra-frequency measurement system information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Intra-frequency measurement identity	MD		Measurement identity 10.3.7.48	The intra-frequency measurement identity has default value 1. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.
Intra-frequency cell info list	OP		Intra-frequency cell info list 10.3.7.33	
Intra-frequency measurement quantity	OP		Intra-frequency measurement quantity 10.3.7.38	If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.
Intra-frequency reporting quantity for RACH Reporting	OP		Intra-frequency reporting quantity for RACH Reporting 10.3.7.42	If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.
Maximum number of reported cells on RACH	OP		Maximum number of reported cells on RACH	If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Reporting information for state CELL_DCH	OP		10.3.7.43 Reporting information for state CELL_DCH 10.3.7.62	Note 1 If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified.

NOTE 1: The reporting of intra-frequency measurements is activated when state CELL\_DCH is entered.

### 10.3.7.41 Intra-frequency reporting quantity

Contains the reporting quantity information for an intra-frequency measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Reporting quantities for active set cells	MP		Cell reporting quantities 10.3.7.5	
Reporting quantities for monitored set cells	MP		Cell reporting quantities 10.3.7.5	
Reporting quantities for detected set cells	OP		Cell reporting quantities 10.3.7.5	

### 10.3.7.42 Intra-frequency reporting quantity for RACH reporting

Contains the reporting quantity information for an intra-frequency measurement report, which is sent on the RACH.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SFN-SFN observed time difference reporting indicator	MP		Enumerated( No report, type 1, type 2)	
CHOICE <i>mode</i>	MP			
>FDD				
>>Reporting quantity	MP		Enumerated( CPICH Ec/N0, CPICH RSCP, Pathloss, No report)	
>TDD				
>>Reporting quantity list	MP	1 to 2		
>>>Reporting quantity	MP		Enumerated( Timeslot ISCP, Primary CCPCH RSCP, No report)	

## 10.3.7.43 Maximum number of reported cells on RACH

Contains the maximum number of intra-frequency cells to be reported on RACH.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Maximum number of reported cells	MP		Enumerated (no report, current cell, current cell + best neighbour, current cell+2 best neighbours, ..., current cell+6 best neighbours)	

## 10.3.7.43a MBMS preferred frequency information

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS preferred frequency list	MP	1 to <maxMBMS-Freq>			REL-6
>MBMS preferred frequency	OP		Integer(1 .. <maxMBMS-Freq>)	Absence of this information element means the currently used frequency. Value n corresponds with the n <sup>th</sup> frequency included in the IE New inter-frequency cells that is specified within SIB 11	REL-6
>CHOICE <i>Layer convergence information</i>	MP				REL-6
>>No HCS					REL-6
>>>Qoffmbms	MP		Enumerated (4, 8, 12, 16, 20, 30, 40, infinity)	The offset in decibel [dB] added to cells on this MBMS preferred frequency	REL-6
>>HCS					REL-6
>>>HCS_OFF <sub>mbms</sub>	MP		Integer (0..7)	Offset added to the normal HCS priority level of cells on this MBMS preferred frequency	REL-6
>MBMS PL Service Restriction Information	OP		Enumerated (TRUE)	Included if some service restrictions apply for this preferred frequency e.g. congestion	REL-6

## 10.3.7.43b MBSFN inter frequency neighbour list

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBSFN inter frequency neighbour list	MP	1 to <maxMBSFNclusters>			REL-7
>MBSFN frequency	MP		Frequency info 10.3.6.36		REL-7
>IMB indication	OP		Enumerated (TRUE)	If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency.	REL-8
>CHOICE MBSFN services notification	MP				REL-7
>>MBSFN services notified				(no data)	REL-7
>>MBSFN services not notified					REL-7
>>>All MBSFN services notified	OP		Enumerated (TRUE)		REL-7

## 10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>Measurement</i>	MP			One spare value is needed.

>UE positioning measured results			10.3.7.76 UE positioning measured results 10.3.7.99	

### 10.3.7.45 Measured results on RACH

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non- used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

### 10.3.7.48 Measurement Identity

A reference number that is used by the UTRAN at modification and release of the measurement, and by the UE in the measurement report.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Measurement identity	MP		Integer(1..16)	

### 10.3.7.49 Measurement reporting mode

Contains the type of Measurement Report transfer mode and the indication of periodical/event trigger.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Measurement Report Transfer Mode	MP		enumerated (Acknowledged mode RLC, Unacknowledged mode RLC)	
Periodical Reporting / Event Trigger Reporting Mode	MP		Enumerated (Periodical reporting, Event trigger)	

### 10.3.7.50 Measurement Type

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Measurement Type	MP		Enumerated (Intra-frequency, Inter-frequency, Inter-RAT, Traffic volume, Quality, UE internal, UE positioning)	

## 10.3.7.51 Measurement validity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UE state	MP		Enumerated(CELL_DCH, all states except CELL_DCH, all states)	

## 10.3.7.52 Void

## 10.3.7.53 Periodical reporting criteria

Contains the periodical reporting criteria information. It is necessary only in the periodical reporting mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Amount of reporting	MD		Integer(1, 2, 4, 8, 16, 32, 64, Infinity)	The default value is infinity.
Reporting interval	MP		Integer(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000)	Indicates the interval of periodical report. Interval in milliseconds

## 10.3.7.53aa Periodical reporting info-1b

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Amount of reporting	MP		Integer(1, 2, 4, 8, 16, 32, 64, Infinity)		REL-5
Reporting interval	MP		Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000)	Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds. 0 means no periodical reporting.	REL-5

## 10.3.7.53a PLMN identities of neighbour cells

This IE contains the PLMN identities of neighbour cells.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
PLMNs of intra-frequency cells list	OP	1 to <maxCellsMeas>		NOTE	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>PLMN identity	OP		PLMN identity 10.3.1.11	Action when not present is specified in subclause 8.1.1.6.18.	
PLMNs of inter-frequency cells list	OP	1 to <maxCellMeas>		NOTE	
>PLMN identity	OP		PLMN identity 10.3.1.11	Action when not present is specified in subclause 8.1.1.6.18.	
PLMNs of inter-RAT cells list	OP	1 to <maxCellMeas>			
>PLMN identity	OP		PLMN identity 10.3.1.11	Action when not present is specified in subclause 8.1.1.6.18.	
Multiple PLMNs of intra-frequency cells list	OP	1 to <maxCellMeas>			REL-8
>Multiple PLMN list	OP	1 to 6		Action when not present is specified in subclause 8.1.1.6.18.	REL-8
>> PLMN identity with Optional MCC	MP		PLMN identity with Optional MCC 10.3.1.11 a		REL-8
Multiple PLMNs of inter-frequency cells list	OP	1 to <maxCellMeas>			REL-8
>Multiple PLMN list	OP	1 to 6		Action when not present is specified in subclause 8.1.1.6.18.	REL-8
>> PLMN identity with Optional MCC	MP		PLMN identity with Optional MCC 10.3.1.11 a		REL-8

NOTE: The IE "PLMNs of intra-frequency cells list" and/or the IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of intra-frequency cells list" and/or the IE "Multiple PLMNs of inter-frequency cells list" instead.

### 10.3.7.54 Primary CCPCH RSCP info

NOTE: Only for TDD

Information Element/Group name	Need	Multi	IE type and reference	Semantics description	Version
Primary CCPCH RSCP	MP		Integer(0..91)	According to P-CCPCH_RSCP_LEV in [19] and [20]. Thirty-six spare values are needed.	
Delta <sub>Primary</sub> CCPCH RSCP	CV-Rel5		Integer(-5..-1)	If present, the actual value of Primary CCPCH RSCP = Primary CCPCH RSCP+ Delta <sub>Primary</sub> CCPCH RSCP	REL-5

Condition	Explanation
Rel5	This IE is mandatory if the value of Primary CCPCH RSCP is below 0. Otherwise the IE is not needed.

## 10.3.7.54a Qhcs

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Qhcs	MP		Integer(0..99)	Qhcs, mapped from CPICH Ec/No (FDD), see [4] [dB] 0: -24 1: -23.5 2: -23 3: -22.5 ... 45: -1.5 46: -1 47: -0.5 48: 0 49: (spare) ... 98: (spare) 99: (spare)	
				Qhcs, mapped from CPICH RSCP (FDD), see [4] [dBm] 0: -115 1: -114 2: -113 : 88: -27 89: -26 90: -(spare) 91: -(spare) : 98: -(spare) 99: -(spare)	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
				Qhcs, mapped from PCCPCH RSCP (TDD), see [4] [dBm] 0: -115 1: -114 2: -113 : 88: -27 89: -26 90: -(spare) 91: -(spare) : 98: -(spare) 99: -(spare)	
				Qhcs level, mapped from Averaged received signal level RSSI (GSM), see [4] [dBm] 0: -110 1: -109 2: -108 : 61: -49 62: -48 63: -47 64: -46 65: -45 66: -44 67: -43 68: -42 69: -41 70: -40 71: -39 72: -38 73: -37 74: -(spare) : 98: -(spare) 99: -(spare)	
Delta <sub>Qhcs-RSCP</sub>	CV-RSCP		Integer(-5..-1)	If present, the actual value of Qhcs = Qhcs + Delta <sub>Qhcs-RSCP</sub>	REL-5

Condition	Explanation
RSCP	This IE is optional if Qhcs is mapped from CPICH RSCP or PCCPCH RSCP, and if the value of the RSCP is below 0 (-115dBm). It is not needed otherwise.

10.3.7.55 Quality measured results list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
BLER measurement results	OP	1 to <maxTrCH >		
>DL Transport channel identity	MP		Transport channel identity	transport channel type = DCH

Information Element/Group name	Need	Multi	Type and reference	Semantics description
			10.3.5.18	
>DL Transport Channel BLER	OP		Integer (0..63)	According to BLER_LOG in [19] and [20]

>>>TFCS ID	MP		Integer(1..8)	
>>>Timeslot list	MP	1 to <maxTS>		for all timeslot on which the CCTrCH is mapped on
>>>>SIR	MP		Integer(0..63)	According to UE_SIR in [20]

### 10.3.7.56 Quality measurement

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Quality reporting quantity	OP		Quality reporting quantity 10.3.7.59	
CHOICE <i>report criteria</i>	MP			
>Quality measurement reporting criteria			Quality measurement reporting criteria 10.3.7.58	Note Given this choice, the IE "DL Transport Channel BLER" shall be set to FALSE (see subclause 10.3.7.59)
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53	Note
>No reporting				Note (no data) Chosen when this measurement only is used as additional measurement to another measurement

NOTE: In this version of the specification, BLER as additional measurement is not supported.

### 10.3.7.57 Quality measurement event results

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Transport channels causing the event	OP	1 to <maxTrCH>		
>DL Transport channel identity	MP		Transport channel identity 10.3.5.18	transport channel type = DCH

### 10.3.7.58 Quality measurement reporting criteria

Event 5a: Number of bad CRCs on a certain transport channel exceeds a threshold.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Parameters sent for each transport channel	MP	1 to <maxTrCH >		
>DL Transport channel identity	MP		Transport channel identity 10.3.5.18	transport channel type = DCH
>Total CRC	MP		Integer(1..512)	Number of CRCs
>Bad CRC	MP		Integer(1..512)	Number of CRCs
>Pending after trigger	MP		Integer(1..512)	Number of CRCs

### 10.3.7.59 Quality reporting quantity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
DL Transport Channel BLER	MP		Boolean	TRUE means report requested
Transport channels for BLER reporting	<i>CV-BLER reporting</i>	1 to <maxTrCH >		The default, if no transport channel identities are present, is that the BLER is reported for all downlink transport channels
>DL Transport channel identity	MP		Transport channel identity 10.3.5.18	transport channel type = DCH
<i>CHOICE mode</i>	MP			
>FDD				No data
>TDD				
>>SIR measurement list	OP	1 to <maxCCTrCH>		SIR measurements shall be reported for all listed TFCS IDs
>>>TFCS ID	MP		Integer(1..8)	

Condition	Explanation
<i>BLER reporting</i>	This IE is not needed if the IE "DL Transport Channel BLER" is FALSE and optional if the IE "DL Transport Channel BLER" is TRUE

### 10.3.7.60 Reference time difference to cell

In the System Information message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell..

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCH of a neighbouring cell.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>accuracy</i>	MP			
>40 chips				
>>Reference time difference	MP		Integer(0..38400 by step of 40)	In chips
>256 chips				
>>Reference time difference	MP		Integer(0..38400 by step of 256)	In chips
>2560 chips				
>>Reference time difference	MP		Integer(0..38400 by step of 2560)	In chips

### 10.3.7.61 Reporting Cell Status

Indicates maximum allowed number of cells to report and whether active set cells and/or virtual active set cells and/or monitored set cells on and/or detected set cells used frequency and/or monitored set cells on non used frequency should/should not be included in the IE "Measured results".

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>reported cell</i>	MP			
>Report cells within active set				This choice is not valid for inter-RAT measurements. For inter-frequency measurements it is only valid for reporting events 2D and 2F. See NOTE 1.
>>Maximum number of reported cells	MP		Integer(1..6)	
>Report cells within monitored set cells on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Integer(1..6)	
>Report cells within active set and/or monitored set cells on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Integer(1..6)	
>Report cells within detected set on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Integer(1..6)	
>Report cells within monitored set and/or detected set on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Integer(1..6)	
>Report all active set cells + cells within monitored set on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Enumerated (virtual/active set cells+1, virtual/active set cells+2, ....., virtual/active set cells+6)	
>Report all active set cells +				This choice is not valid for

Information Element/Group name	Need	Multi	Type and reference	Semantics description
cells within detected set on used frequency				inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Enumerated (virtual/active set cells+1, virtual/active set cells+2, ....., virtual/active set cells+6)	
>Report all active set cells + cells within monitored set and/or detected set on used frequency				This choice is not valid for inter-RAT or inter-frequency measurements
>>Maximum number of reported cells	MP		Enumerated (virtual/active set cells+1, virtual/active set cells+2, ....., virtual/active set cells+6)	
>Report cells within virtual active set				This choice is not valid for intra-frequency or inter-RAT measurements
>>Maximum number of reported cells per reported non-used frequency	MP		Integer(1..6)	
>Report cells within monitored set on non-used frequency				This choice is not valid for intra-frequency or inter-RAT measurements
>>Maximum number of reported cells per reported non-used frequency	MP		Integer(1..6)	
>Report cells within monitored and/or virtual active set on non-used frequency				This choice is not valid for intra-frequency or inter-RAT measurements
>>Maximum number of reported cells per reported non-used frequency	MP		Integer(1..6)	
>Report all virtual active set cells + cells within monitored set on non-used frequency				This choice is not valid for intra-frequency or inter-RAT measurements
>>Maximum number of reported cells per reported non-used frequency	MP		Enumerated (virtual/active set cells+1, virtual/active set cells+2, ....., virtual/active set cells+6)	
>Report cells within active set or within virtual active set or of the other RAT				If this choice is selected for inter-RAT measurements, the UE shall report only cells of the other RAT. If this choice is selected for intra-frequency measurements, the UE shall report cells within the active set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set.
>>Maximum number of reported cells	MP		Integer (1..12)	
>Report cells within active				This choice is not valid for

Information Element/Group name	Need	Multi	Type and reference	Semantics description
and/or monitored set on used frequency or within virtual active and/or monitored set on non-used frequency				inter-RAT measurements. If this choice is selected for intra-frequency measurements, the UE shall report cells within the active and/or monitored set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set and/or monitored set on non-used frequency.
>>Maximum number of reported cells	MP		Integer(1..12)	

NOTE 1: For Inter-frequency reporting events 2D and 2F, only CHOICE "Report cells within active set" is valid.

### 10.3.7.62 Reporting information for state CELL\_DCH

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Intra-frequency reporting quantity	MP		Intra-frequency reporting quantity 10.3.7.41	
Measurement Reporting Mode	MP		Measurement Reporting Mode 10.3.7.49	
CHOICE <i>report criteria</i>	MP			
>Intra-frequency measurement reporting criteria			Intra-frequency measurement reporting criteria 10.3.7.39	This IE may only contain measurement events from 1A to 1I, but not measurement event 1J.
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53	

### 10.3.7.63 SFN-SFN observed time difference

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>type</i>	MP				
>Type 1			Integer(0..9830399)	According to T1_SFN-SFN_TIME in [19] and [20]. For FDD and 3.84 Mcps TDD and 7.68 Mcps TDD: 6946816 spare values are needed.	
			Integer(0..3276799)	For 1.28 Mcps TDD: 13500416 spare values are needed.	Rel-4
>Type 2			Integer(0..40961)	According to T2_SFN-SFN_TIME in [19] and [20]. 24574 spare values are needed.	
			Integer(0..27649)	For 1.28 Mcps TDD: 37886 spare values are needed.	Rel-4

## 10.3.7.64 Time to trigger

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Time to trigger	MP		Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000)	Time in ms

## 10.3.7.65 Timeslot ISCP info

NOTE: Only for TDD

Information Element/Group name	Need	Multi	IE type and reference	Semantics description
Timeslot ISCP	MP		Integer (0..91)	According to UE_TS_ISCP_LEV in [20]. Thirty-six spare values are needed.

## 10.3.7.66 Traffic volume event identity

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Traffic volume event identity	MP		Enumerated(4a, 4b)	

## 10.3.7.67 Traffic volume measured results list

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Traffic volume measurement results	OP	1 to <maxRB>		
>RB Identity	MP		RB Identity 10.3.4.16	
>RLC Buffers Payload	OP		Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K)	In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed.
>Average of RLC Buffer Payload	OP		Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K)	In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed.
>Variance of RLC Buffer Payload	OP		Enumerated(0, 4, 8, 16, 32, 64, 128,	In bytes And N Kbytes = N*1024 bytes. Two spare values are needed.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
			256, 512, 1024, 2K, 4K, 8K, 16K)	

### 10.3.7.68 Traffic volume measurement

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Traffic volume measurement Object	OP		Traffic volume measurement Object 10.3.7.70	
Traffic volume measurement quantity	OP		Traffic volume measurement quantity 10.3.7.71	
Traffic volume reporting quantity	OP		Traffic volume reporting quantity 10.3.7.74	
Measurement validity	OP		Measurement validity 10.3.7.51	
<i>CHOICE report criteria</i>	MP			
>Traffic volume measurement reporting criteria			Traffic volume measurement reporting criteria 10.3.7.72	
>Periodical reporting criteria			Periodical reporting criteria 10.3.7.53	
>No reporting				(no data) Chosen when this measurement only is used as additional measurement to another measurement

### 10.3.7.69 Traffic volume measurement event results

Contains the event result for a traffic volume measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Uplink transport channel type causing the event	MP		Enumerated(DCH,RACH, USCH)	USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured.
UL Transport Channel identity	CV-UL-DCH/USC		Transport channel	

Information Element/Group name	Need	Multi	Type and reference	Semantics description
	<i>H</i>		identity 10.3.5.18	
Traffic volume event identity	MP		Traffic volume event identity 10.3.7.66	

Condition	Explanation
<i>UL-DCH/USCH</i>	If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed.

### 10.3.7.70 Traffic volume measurement object

Contains the measurement object information for a traffic volume measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Traffic volume measurement objects	MP	1 to <maxTrCH >		
>Uplink transport channel type	MP		Enumerated( DCH,RACH, USCH)	USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured.
>UL Target Transport Channel ID	<i>CV-UL-DCH/USCH</i> <i>H</i>		Transport channel identity 10.3.5.18	

Condition	Explanation
<i>UL-DCH/USCH</i>	If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed.

### 10.3.7.71 Traffic volume measurement quantity

Contains the measurement quantity information for a traffic volume measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Measurement quantity	MP		Enumerated(RLC buffer payload, Average RLC buffer payload, Variance of RLC buffer payload)	This parameter should be ignored.
Time Interval to take an average or a variance	CV-A/V		Integer(20, 40, ..260, by steps of 20)	In ms

Condition	Explanation
A/V	This IE is mandatory present when "Average RLC buffer" or "Variance of RLC buffer payload" is chosen and not needed otherwise.

### 10.3.7.72 Traffic volume measurement reporting criteria

Contains the measurement reporting criteria information for a traffic volume measurement.

Event 4a: Transport Channel Traffic Volume [15] exceeds an absolute threshold.

Event 4b: Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Parameters sent for each transport channel	OP	1 to <maxTrCH >		This IE is always required, need is OP to align with ASN.1
>Uplink transport channel type	OP		Enumerated(DCH,RACH, USCH)	USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured.
>UL Transport Channel ID	CV-UL-DCH/USCH		Transport channel identity 10.3.5.18	
>Parameters required for each Event	OP	1 to <maxMeas parEvent>		
>>Traffic volume event identity	MP		Traffic volume event identity 10.3.7.66	
>>Reporting Threshold	MP		Enumerated(8,16,32,64,128,256,512,1024,2K,3K,4K,6K,8K,12K,16K,24K,32K,48K,64K,96K,128K,192K,256K,384K,512K,768K)	Threshold in bytes And N Kbytes = N*1024 bytes
>>Time to trigger	OP		Time to trigger 10.3.7.64	Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms
>>Pending time after trigger	OP		Integer(250, 500, 1000, 2000, 4000, 8000, 16000)	Indicates the period of time during which it is forbidden to send any new measurement reports with the same Traffic volume event identity even if the triggering condition is fulfilled. Time in milliseconds
>>Tx interruption after trigger	OP		Integer (250, 500, 1000, 2000, 4000, 8000, 16000)	Time in milliseconds. Indicates how long the UE shall block DTCH transmissions on the RACH after a measurement report is triggered.

Condition	Explanation
<i>UL-DCH/USCH</i>	If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is optional. Otherwise the IE is not needed.

### 10.3.7.73 Traffic volume measurement system information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Traffic volume measurement identity	MD		Measurement identity 10.3.7.48	The traffic volume measurement identity has default value 4.

Periodical reporting criteria	Chosen when periodical reporting is required
No reporting	Chosen when this measurement only is used as additional measurement to another measurement

## 10.3.7.78 UE internal measurement event results

This IE contains the measurement event results that are reported to UTRAN for UE internal measurements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UE internal event identity	MP		UE internal event identity 10.3.7.75	
<i>CHOICE mode</i>	MP			
>FDD				
>Primary CPICH info	<i>CV-clause 1</i>		Primary CPICH info 10.3.6.60	
>TDD				(no data)

Condition	Explanation
<i>Clause 1</i>	This IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed.

## 10.3.7.79 UE internal measurement quantity

The quantity the UE shall measure in case of UE internal measurement.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>mode</i>	MP				
>FDD					
>>Measurement quantity	MP		Enumerated(UE Transmitted Power, UTRA Carrier RSSI, UE Rx-Tx time difference)		
>TDD					
>>Measurement quantity	MP		Enumerated(UE Transmitted Power, UTRA Carrier RSSI, T <sub>ADV</sub> )	Measurement on Timing Advance is for 1.28 Mcps TDD	REL-4
Filter coefficient	OP		Filter coefficient 10.3.7.9	If the IE "Measurement quantity" is set to "Rx-Tx time difference" and this IE is present, the UE behaviour is unspecified.	

### 10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c.... In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by T<sub>ADV</sub> becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Parameters sent for each UE internal measurement event	OP	1 to <maxMeas Event>			
>UE internal event identity	MP		UE internal event identity 10.3.7.75		

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>Time-to-trigger	MP		Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000)	Time in ms. Indicates the period of time between the timing of event detection and the timing of sending Measurement Report.	
>UE Transmitted Power Tx power threshold	CV-clause 1		Integer(-50..33)	Power in dBm. In event 6a, 6b.	
>UE Rx-Tx time difference threshold	CV-clause 2		Integer(768..1280)	Time difference in chip. In event 6f, 6g.	
>T <sub>ADV</sub> threshold	CV-clause 3		Real (0..63 step 0.125)	Time difference in chip. In event 6f	REL-4

Condition	Explanation
Clause 1	The IE is mandatory present if the IE "UE internal event identity" is set to "6a" or "6b", otherwise the IE is not needed.
Clause 2	In FDD, the IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed.
Clause 3	In 1.28 Mcps TDD the IE is mandatory present if the IE "UE internal event identity" is set to "6f", otherwise the IE is not needed.

### 10.3.7.81 Void

### 10.3.7.82 UE Internal reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE Transmitted Power	MP		Boolean

### 10.3.7.83 UE Rx-Tx time difference type 1

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7]. This measurement is for FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UE Rx-Tx time difference type 1	MP		Integer(768..1280)	In chips. 511 spare values are needed.

#### 10.3.7.84 UE Rx-Tx time difference type 2

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7].

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UE Rx-Tx time difference type 2	MP		Integer (0..8191)	According to [19].

#### 10.3.7.85 UE Transmitted Power info

Information Element/Group name	Need	Multi	IE type and reference	Semantics description
UE Transmitted Power	MP		Integer (0..104)	According to UE_TX_POWER in [19] and [20]

#### 10.3.7.86 UE positioning Ciphering info

This IE contains information for the ciphering of UE positioning assistance data broadcast in System Information.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Ciphering Key Flag	MP		Bit string(1)	
Ciphering Serial Number	MP		Integer(0..65535)	The serial number used in the DES ciphering algorithm

10.3.7.87 UE positioning Error

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Error reason	MP		Enumerated( Not Enough OTDOA Cells, Not Enough GPS Satellites, Assistance Data Missing, Not Accomplished GPS Timing Of Cell Frames, Undefined Error, Request Denied By User, Not Processed And Timeout, Reference Cell Not Serving Cell,	Note 1	
			Not Enough GANSS Satellites, Not Accomplished GANSS Timing Of Cell Frames)	Note 1	REL-7
GPS Additional Assistance Data Request	CV- <i>GPSdataMissing</i>		UE positioning GPS Additional Assistance Data Request 10.3.7.88a		
GANSS Additional Assistance Data Request	CV- <i>GANSSdataMissing</i>		UE positioning GANSS Additional Assistance Data Request 10.3.7.88c		REL-7

NOTE 1: The following table describes each value of the IE "Error reason".

Value	Indication
Not Enough OTDOA Cells	There were not enough cells to be received.
Not Enough GPS Satellites	There were not enough GPS satellites to be received.
Assistance Data Missing	UE positioning GANSS or/and GPS assistance data missing.
Not Accomplished GPS Timing Of Cell Frames	UE was not able to accomplish the GPS timing of cell frames measurement.
Undefined Error	Undefined error.
Request Denied By User	UE positioning request denied by upper layers.
Not Processed And Timeout	UE positioning request not processed by upper layers and timeout.
Reference Cell Not Serving Cell	UE was not able to read the SFN of the reference cell.
Not Enough GANSS Satellites	There were not enough GANSS satellites to be received.
Not Accomplished GANSS Timing Of Cell Frames	UE was not able to accomplish the GANSS timing of cell frames measurement.

Condition	Explanation
<i>GPSdataMissing</i>	The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise.
<i>GANSSdataMissing</i>	The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise.

### 10.3.7.88 UE positioning GPS acquisition assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
GPS TOW msec	MP		Integer(0..6.048*10 <sup>8</sup> -1)	GPS Time of Week in milliseconds rounded down to the nearest millisecond unit. It is also the time when satellite information is valid.	
UTRAN GPS reference time	OP				
>UTRAN GPS timing of cell frames	MP		Integer(0 ... 2322431999999)	GPS timing of cell frames in steps of 1 chip.	
>CHOICE mode	OP				
>>FDD					
>>>Primary CPICH Info	MP		Primary CPICH Info 10.3.6.60	Identifies the reference cell for the GPS TOW-SFN relationship	
>>TDD					
>>>cell parameters id	MP		Cell parameters id 10.3.6.9	Identifies the reference cell for the GPS TOW-SFN relationship	
>SFN	MP		Integer(0..4095)	The SFN which the UTRAN GPS timing of cell frames time stamps.	
UE Positioning GPS ReferenceTime Uncertainty	OP		UE positioning GPS reference time uncertainty 10.3.7.96a		REL-7
Satellite information	MP	1 to <maxSat>			
>SatID	MP		Integer (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12].	
>Doppler (0 <sup>th</sup> order term)	MP		Real(-5120..5117.5 by step of 2.5)	Hz	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
>Extra Doppler	OP				
>>Doppler (1 <sup>st</sup> order term)	MP		Real (-0.966..0.483 by step of 0.023)	Hz/s	
>>Doppler Uncertainty	MP		Enumerated (12.5,25,50,100,200)	Hz. Three spare values are needed. The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty' to 'Doppler + Doppler Uncertainty'.	
>Code Phase	MP		Integer(0..1022)	GPS chips. Increasing binary values of the field signify increasing predicted pseudoranges.	
>Integer Code Phase	MP		Integer(0..19)	Number of code periods that have elapsed since the latest GPS bit boundary, in units of C/A code period.	
>GPS Bit number	MP		Integer(0..3)	Specifies GPS bit number modulo 4	
>Code Phase Search Window	MP		Integer(1023,1,2,3,4,6,8,12,16,24,32,48,64,96,128,192)	Expected code-phase is in the range 'Code Phase – Code Phase Search Window' to 'Code Phase + Code Phase Search Window'.	
>Azimuth and Elevation	OP				
>>Azimuth	MP		Real(0..348.75 by step of 11.25)	Degrees An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+11.25$ degrees.	
>>Elevation	MP		Real(0..78.75 by step of 11.25)	Degrees An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+11.25$ degrees except for $y=78.75$ where the range is extended to include 90 degrees.	

### 10.3.7.88a UE positioning GPS Additional Assistance Data Request

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Almanac	MP		Boolean	TRUE means requested
UTC Model	MP		Boolean	TRUE means requested
Ionospheric model	MP		Boolean	TRUE means requested

Real-Time Integrity	MP		Boolean	TRUE means requested
Navigation Model Additional data	CV- <i>Navigation Model</i>			this IE is present only if "Navigation Model" is set to TRUE otherwise it is absent
>GPS Week	MP		Integer (0..1023)	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
>GPS_Toe	MP		Integer (0..167)	GPS time of ephemeris in hours of the latest ephemeris set contained by the UE. Eighty-eight spare values needed.
>T-Toe limit	MP		Integer (0..10)	ephemeris age tolerance of the UE to UTRAN in hours. Five spare values needed.
>Satellites list related data	MP	0 to <maxSat>		
>>SatID	MP		Integer (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12].
>>IODE	MP		Integer (0..255)	Issue of Data Ephemeris for SatID

## 10.3.7.88b UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GANSS signals in UE-assisted GANSS positioning. If the IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GANSS reference time" IE. I.e., if IE "UE positioning GANSS reference measurement information" is included in IE "UE positioning GANSS assistance data" and IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the IE "UE positioning GANSS reference time" shall also be included. If the IE "UE positioning GPS acquisition assistance" is included in IE "UE positioning measurement", the IE "GPS TOW msec" and IE "UTRAN GPS reference time" included in IE "UE positioning GPS acquisition assistance" is also valid for the Satellite information in IE "UE positioning GANSS reference measurement information".

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
GANSS Signal ID	OP		GANSS Signal Id 10.3.3.45a	Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. If this IE is asked by SIB 15.6, the GANSS shall be solved by the scheduling information.	REL-7
Satellite information	MP	1 to <maxGANSSSat>			REL-7
>SatID	MP		Integer (0..63)	Identifies the satellite within a GANSS constellation. For coding description, see Note 2.	REL-7
>Doppler (0 <sup>th</sup> order term)	MP		Real(-1024..1023.5 by step of 0.5)	m/s Conversion between m/s and Hz shall be made by using the <i>nominal</i> wavelength of the assisted signal.	REL-7
>Extra Doppler	OP				REL-7
>>Doppler (1 <sup>st</sup> order term)	MP		Real (-0.2..0.1 by step of 1/210)	m/s <sup>2</sup>	REL-7
>>Doppler Uncertainty	MP		Enumerated (40,20,10,5, 2.5)	m/s. The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty' to 'Doppler + Doppler Uncertainty'. Three spare values are needed.	REL-7
>Code Phase	MP		Integer(0..1023)	ms, scaling factor 2 <sup>-10</sup> <i>Nominal</i> chipping rate of the GNSS signal shall be used in conversion. Increasing binary values of the field signify increasing predicted code phases.	REL-7
>Integer Code Phase	MP		Integer(0..127)	ms. Integer code phase (expressed modulo 128 ms) currently being transmitted at the Reference Time included in either IE "UE positioning GANSS reference time" or IE "UE positioning GPS acquisition assistance", as seen by a receiver at the Reference Location. The UE can calculate the expected code phase as	REL-7

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
				follows: Reference Time – Integer Code Phase + Code Phase.	
>Code Phase Search Window	MP		Bit string (5)	Coded expected code-phase is in the range 'Code Phase – Code Phase Search Window' to 'Code Phase + Code Phase Search Window'. For coding description, see Note 1	REL-7
>Azimuth and Elevation	OP				REL-7
>>Azimuth	MP		Real(0..348.75 by step of 11.25)	Degrees An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+11.25$ degrees.	REL-7
>>Elevation	MP		Real(0..78.75 by step of 11.25)	Degrees An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+11.25$ degrees except for $y=78.75$ where the range is extended to include 90 degrees.	REL-7

## 10.3.7.88c UE positioning GANSS additional assistance data request

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
GANSS Reference Time	MP		Boolean	TRUE means requested	REL-7
GANSS Reference Location	MP		Boolean	TRUE means requested	REL-7
GANSS Ionospheric model	MP		Boolean	TRUE means requested	REL-7
GANSS Additional Ionospheric Model	OP		Data ID Bit String(2)	If present, the UE requests the 'UE positioning GANSS additional ionospheric model' for a 'Data ID' as defined in 10.3.7.92b.	REL-8
GANSS Earth Orientation Parameters	OP		Enumerated (TRUE)	If present, the UE requests the 'UE positioning GANSS Earth orientation parameters'	REL-8
GANSS Requested Generic Assistance Data	MP	1 to <maxGANSS>			REL-7
>GANSS ID	OP		Integer(0..7)	Absence of this IE means Galileo Values 0-7 reserved for future use.	REL-7
				Absence of this IE means Galileo. For coding description see NOTE 1 in 10.3.7.90b.	REL-8
>SBAS ID	CV-GANSS- S-ID-SBAS		UE positioning GANSS SBAS ID 10.3.7.97e		REL-8
>GANSS Real-Time Integrity	MP		Boolean	TRUE means requested	REL-7
>DGANSS Signal	OP		DGANSS Signal Id 10.3.7.88d		REL-7
>GANSS Almanac	MP		Boolean	TRUE means requested	REL-7
				TRUE means requested. If 'GANSS ID' indicates 'Modernized GPS' or 'QZSS' and IE 'GANSS additional assistance data choices' is not included, the GANSS Almanac model requested is 'Model-4' for Modernized GPS, and 'Model-2' for QZSS, as defined in 10.3.7.89a.	REL-8
>GANSS Navigation Model	MP		Boolean	TRUE means requested	REL-7
>GANSS Additional Navigation Models	OP		Enumerated (TRUE)	If present, the UE requests the 'UE positioning GANSS additional navigation models'. If 'GANSS ID' indicates 'QZSS' and IE 'GANSS additional assistance data choices' is not included, the GANSS orbit and clock model requested is 'Model-2' as defined in 10.3.7.91e and 10.3.7.91f, respectively.	REL-8
>GANSS Time Model GNSS-GNSS	OP		BIT STRING (8)	The reference system for requested GANSS time model GNSS-GNSS is as indicated in IE "GANSS ID". The models are requested for each system with respective bit set to '1'. Bit 0 is set for GPS, Bit 1 is set for Galileo. Other bits are reserved	REL-7

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
				Bit 2 is set for QZSS Bit 3 is set for GLONASS Other bits are reserved	REL-8
>GANSS Reference Measurement Information	MP		Boolean	TRUE means requested	REL-7
>GANSS data bits	OP				REL-7
>>GANSS TOD	MP		INTEGER (0..86399)	This field contains the reference time modulo 86400 seconds of the first data bit of the requested data in integer seconds in GNSS specific system time of the GNSS indicated by IE "GANSS ID".	REL-7
>>>Data bit assistance	MP				REL-7
>>>>GANSS Signal ID	MP		DGANSS Signal Id 10.3.7.88d		REL-7
>>>>GANSS Data Bit Interval	MP		Integer (0..15)	This field represents the time length for which the Data Bit Assistance is requested. The Data Bit Assistance shall be relative to the time interval (GANSS TOD, GANSS TOD + Data Bit Interval). The Data Bit Interval $r$ , expressed in seconds, is mapped to a binary number $K$ with the following formula: $r = 0.1 * 2^K$ Value $K=15$ means that the time interval is not specified.	REL-7
>>>>Satellite Information	OP	1 to <maxGANSSSat>			REL-7
>>>>>Satellite ID	MP		Integer (0..63)	Identifies the satellite for which the Data Bit Assistance request is applicable and is as defined in Note 2 of 10.3.7.88b.	REL-7
>GANSS UTC model	MP		Boolean	TRUE means Requested	REL-7
>GANSS Additional UTC Models	OP		Enumerated (TRUE)	If present, the UE requests the 'UE positioning GANSS additional UTC models'	REL-8
>GANSS Auxiliary Information	OP		Enumerated (TRUE)	If present, the UE requests the 'UE positioning GANSS auxiliary information'	REL-8
>GANSS Navigation Model Additional data	CV-GANSSNavigation Model				REL-7
>>GANSS Week/Day	MP		Integer (0..4095)	If 'GANSS ID' does not indicate 'GLONASS', this IE defines the GANSS Week number of the assistance currently held by the MS. If 'GANSS ID' is set to 'GLONASS', this IE defines the calendar number of day within the four-year interval starting from 1st of January in a leap year, as defined by the parameter $N_T$ in [73] of the assistance currently held by the MS.	REL-7 REL-8

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
>>GANSS_Toe	MP		Integer (0..167)	If 'GANSS ID' does not indicate 'GLONASS', this IE defines the GANSS time of ephemeris in hours of the latest ephemeris set contained by the UE.	REL-7
				If 'GANSS ID' is set to 'GLONASS', this IE defines the time of ephemeris in units of 15 minutes of the latest ephemeris set contained by the UE (range 0 to 95 representing time values between 0 and 1425 minutes). In this case, values 96 to 167 shall not be used by the sender.	REL-8
>>T-Toe limit	MP		Integer (0..10)	If 'GANSS ID' does not indicate 'GLONASS', this IE defines the ephemeris age tolerance of the UE to UTRAN in units of hours. Five spare values needed.	REL-7
				If 'GANSS ID' is set to 'GLONASS', this IE defines the ephemeris age tolerance of the UE to UTRAN in units of 30 minutes (range 0 to 10 representing time values of 0 to 300 minutes).	REL-8
>>Satellites list related data	OP	1 to <maxGANSSSat>			REL-7
>>>SatID	MP		Integer (0..63)	Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.	REL-7
>>>IOD	MP		Integer (0..1023)	10 LSBs of Issue of Data for SatID	REL-7
>GANSS additional assistance data choices	CV- Assistance Choices				REL-8
>>Orbit Model ID	OP		Integer (0..7)	This IE may be included if IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and defines the non-native or non-default orbit model number as defined in 10.3.7.91c/10.3.7.91e.	REL-8
>>Clock Model ID	OP		Integer (0..7)	This IE may be included if IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and defines the non-native or non-default clock model number as defined in 10.3.7.91d/10.3.7.91f.	REL-8
>>UTC Model ID	OP		Integer (0..7)	This IE may be included if IE 'GANSS Additional UTC Models' is included and defines the non-native or non-default UTC model number as defined in 10.3.7.97d.	REL-8

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
>>Almanac Model ID	OP		Integer (0..7)	This IE may be included if IE 'GANSS Almanac' set to TRUE and defines the non-native or non-default model number as defined in 10.3.7.89a.	REL-8

Condition	Explanation
<i>GANSS-ID-SBAS</i>	This IE is mandatory present if the IE 'GANSS ID' is 'SBAS' and not needed otherwise.
<i>GANSSNavigation Model</i>	The IE is mandatory present if the IE "GANSS Navigation Model" is set to TRUE or if the IE 'GANSS Additional Navigation Models' is included and not needed otherwise.
<i>AssistanceChoices</i>	This IE is mandatory present if non-native or non-default assistance data choices are requested and not needed otherwise.

### 10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version

NOTE: If included, only one of the optional fields indicated by "NOTE" shall be present.

Condition	Explanation
GANSS-ID-SBAS	The IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise.

NOTE 1: Coding of GANSS ID

Value of GANSS ID	GANSS	Version
0	SBAS	REL-8
1	Modernized GPS	
2	QZSS	
3	GLONASS	
4-7	Reserved for future use	

### 10.3.7.91 UE positioning GPS DGPS corrections

This IE contains DGPS corrections to be used by the UE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
GPS TOW sec	MP		Integer(0..604799)	seconds GPS time-of-week when the DGPS corrections were calculated
Status/Health	MP		Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data)	
DGPS information	CV-Status/Health	1 to <maxSat>		If the Cipher information is included these fields are ciphered.
>SatID	MP		Enumerated (0...63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12].
>IODE	MP		Integer(0..255)	
>UDRE	MP		Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE)	The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite.
>PRC	MP		Real(-655.04..655.04 by step of 0.32)	meters (different from [13])
>RRC	MP		Real(-4.064..4.064 by step of 0.032)	meters/sec (different from [13])
>Delta PRC2	MP		Integer(-127..127)	In this version of the protocol this IE should be set to zero and the UE shall ignore it
>Delta RRC2	MP		Real(-0.224..0.224 by step of 0.032)	In this version of the protocol this IE should be set to zero and the UE shall ignore it

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
>Delta PRC3	OP		Integer(-127..127)	This IE should not be included in this version of the protocol and if received the UE shall ignore it
>Delta RRC3	OP		Real(-0.224..0.224 by step of 0.032)	This IE should not be included in this version of the protocol and if received the UE shall ignore it

Condition	Explanation
<i>Status/Health</i>	This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed.

### 10.3.7.91a UE positioning GPS Ephemeris and Clock Correction parameters

This IE contains information for GPS ephemeris and clock correction.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
C/A or P on L2	MP		Bit string(2)	Code(s) on L2 Channel [12]
URA Index	MP		Bit string(4)	User Range Accuracy [12]
SV Health	MP		Bit string(6)	[12]
IODC	MP		Bit string(10)	Issue of Data, Clock [12]
L2 P Data Flag	MP		Bit string(1)	[12]
SF 1 Reserved	MP		Bit string(87)	[12]
TGD	MP		Bit string(8)	Estimated group delay differential [12]
t <sub>oc</sub>	MP		Bit string(16)	apparent clock correction [12]
af <sub>2</sub>	MP		Bit string(8)	apparent clock correction [12]
af <sub>1</sub>	MP		Bit string(16)	apparent clock correction [12]
af <sub>0</sub>	MP		Bit string(22)	apparent clock correction [12]
C <sub>rs</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [12]
Δn	MP		Bit string(16)	Mean Motion Difference From Computed Value (semi-circles/sec) [12]
M <sub>0</sub>	MP		Bit string(32)	Mean Anomaly at Reference Time (semi-circles) [12]
C <sub>uc</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [12]
e	MP		Bit string(32)	c
C <sub>us</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [12]
(A) <sup>1/2</sup>	MP		Bit string(32)	Semi-Major Axis (meters) <sup>1/2</sup> [12]
t <sub>oe</sub>	MP		Bit string(16)	Reference Time Ephemeris [12]
Fit Interval Flag	MP		Bit string(1)	[12]
AODO	MP		Bit string(5)	Age Of Data Offset [12]
C <sub>ic</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [12]

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
OMEGA <sub>0</sub>	MP		Bit string(32)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [12]
C <sub>is</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [12]
i <sub>0</sub>	MP		Bit string(32)	Inclination Angle at Reference Time (semi-circles) [12]
C <sub>rc</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [12]
ω	MP		Bit string(32)	Argument of Perigee (semi-circles) [12]
OMEGA <sub>dot</sub>	MP		Bit string(24)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [12]
Idot	MP		Bit string(14)	Rate of Inclination Angle (semi-circles/sec) [12]

### 10.3.7.91b UE positioning DGNSS corrections

This IE contains DGNSS corrections to be used by the UE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
DGANSS Reference Time	MP		Integer(0..3570 by step of 30)	Seconds. Time in GNSS system time (modulo 3600 s) when the DGANSS corrections were calculated	REL-7
DGANSS information	MP	1 to <maxSgnType>			REL-7
>GANSS Signal ID	OP		GANSS Signal Id 10.3.3.45a	Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID.	REL-7
>Status/Health	MP		Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data)		REL-7
>DGANSS signal information	CV-Status/Health	1 to <maxGANSSSat>		If the Cipher information is included these fields are ciphered.	REL-7
>>SatID	MP		Integer (0..63)	Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.	REL-7
>>IOD	MP		Bit string(10)	10 LSBs of Issue of Data field, which contains the identity of the GANSS Navigation Model.	REL-7
>>UDRE	MP		Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE)	The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite.	REL-7
>>PRC	MP		Real(-655.04..655.04 by step of 0.32)	meters Pseudo-range corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS).	REL-7
>>RRC	MP		Real(-4.064..4.064 by step of 0.032)	meters/sec Pseudo-range rate corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS).	REL-7

Condition	Explanation
Status/Health	This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed.

## 10.3.7.91c UE positioning GANSS orbit model

This IE contains information for GANSS orbit model parameters.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Keplerian Parameters ('Model 1')	OP			NOTE	REL-7
>t <sub>oe</sub>	MP		Bit String(14)	Time-of-Ephemeris in seconds, scale factor 60 [61]	REL-7
> $\omega$	MP		Bit string(32)	Argument of Perigee (semi-circles) [61]	REL-7
> $\Delta n$	MP		Bit string(16)	Mean Motion Difference From Computed Value (semi-circles/sec) [61]	REL-7
>M <sub>0</sub>	MP		Bit string(32)	Mean Anomaly at Reference Time (semi-circles) [61]	REL-7
>OMEGA <sub>dot</sub>	MP		Bit string(24)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [61]	REL-7
>e	MP		Bit string(32)	Eccentricity, scale factor 2 <sup>-33</sup> [61]	REL-7
>I <sub>dot</sub>	MP		Bit string(14)	Rate of Inclination Angle (semi-circles/sec) [61]	REL-7
>sqrtA	MP		Bit String(32)	Semi-Major Axis in (meters) <sup>1/2</sup> , scale factor 2 <sup>-19</sup> [61]	REL-7
>i <sub>0</sub>	MP		Bit string(32)	Inclination Angle at Reference Time (semi-circles) [61]	REL-7
>OMEGA <sub>0</sub>	MP		Bit string(32)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [61]	REL-7
>C <sub>rs</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [61]	REL-7
>C <sub>is</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [61]	REL-7
>C <sub>us</sub>	MP		Bit string(16)	Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [61]	REL-7
>C <sub>rc</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [61]	REL-7
>C <sub>ic</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [61]	REL-7
>C <sub>uc</sub>	MP		Bit string(16)	Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [61]	REL-7

NOTE: This IE shall contain exactly one of the optional fiels indicated by "NOTE".

## 10.3.7.91d UE positioning GANSS clock model

The IE contains fields needed to model the GANSS clock parameters.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Satellite clock model ('Model 1')	MP	1 to <maxSatClockModels>		There may be more than one clock model included if defined in SIS ICD (e.g. two for Galileo)	REL-7
>t <sub>oc</sub>	MP		BIT STRING(14)	Time-of-Clock in seconds. Scale factor 60 seconds.	REL-7
>a <sub>f2</sub>	MP		BIT STRING (12)	sec/sec <sup>2</sup> , scale factor 2 <sup>-65</sup> for Galileo	REL-7
>a <sub>f1</sub>	MP		BIT STRING (18)	sec/sec, scale factor 2 <sup>-45</sup>	REL-7
>a <sub>f0</sub>	MP		BIT STRING (28)	sec, scale factor 2 <sup>-33</sup>	REL-7
>T <sub>GD</sub>	OP		BIT STRING (10)	sec, scale factor 2 <sup>-32</sup> for Galileo	REL-7
>Model ID	OP		Integer(0..1)	NOTE 1	REL-7

NOTE 1: Coding of Model ID:

GNSS	Value	Explanation
Galileo	0	I/Nav
	1	F/Nav

## 10.3.7.91e UE positioning GANSS additional orbit models

This IE contains information for GANSS orbit model parameters.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version

### 10.3.7.94 UE positioning GPS navigation model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Satellite information	MP	1 to <maxSat>		
>SatID	MP		Enumerated(0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12].
>Satellite Status	MP		Enumerated(NS_NN, ES_SN, ES_NN, REVD)	NOTE
>GPS Ephemeris and Clock Correction parameters	CV-Satellite status		UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a	

NOTE: The UE shall interpret enumerated symbols as follows.

Value	Indication
NS_NN	New satellite, new Navigation Model
ES_SN	Existing satellite, same Navigation Model
ES_NN	Existing satellite, new Navigation Model
REVD	Reserved

Condition	Explanation
<i>Satellite status</i>	The IE is not needed if the IE "Satellite status" is ES_SN and mandatory present otherwise.

### 10.3.7.94a UE positioning GANSS navigation model

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Non-Broadcast Indication	OP		Enumerated (TRUE)	If this IE is present, GANSS navigation model is not derived from satellite broadcast	REL-7
Satellite information	MP	1 to <maxGANSSSat>			REL-7
>SatID	MP		Integer (0..63)	Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.	REL-7
>SV Health	MP		Bit string(5)	NOTE	REL-7
>IOD	MP		Bit string(10)		REL-7
>GANSS Clock Model	MP		UE positioning GANSS clock model 10.3.7.91d		REL-7
> GANSS Orbit Model	MP		UE positioning GANSS orbit model 10.3.7.91c		REL-7

NOTE: The Health values are GNSS specific. For Galileo, the UE shall interpret bit string as follows:

Parameter	Bit	Type	Explanation
E5a Data Validity Status	0	Boolean	
E5b Data Validity Status	1	Boolean	
E1-B Data Validity Status	2	Boolean	
E5a Signal Health Status	3-4	Bit string	See [61], Table 67

### 10.3.7.94b UE positioning GANSS additional navigation models

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Non-Broadcast Indication	OP		Enumerated (TRUE)	If this IE is present, GANSS navigation model is not derived from satellite broadcast	REL-8
Satellite information	MP	1 to <maxGAN SSSat>			REL-8
>SatID	MP		Integer (0..63)	Identifies the satellite and is as defined in Note 2 of 10.3.7.88b.	REL-8
>SV Health	MP		Bit string(6)	NOTE 1	REL-8
>IOD	MP		Bit string(11)	NOTE 2	REL-8
>GANSS additional clock models	MP		UE positioning GANSS additional clock models 10.3.7.91f		REL-8
>GANSS additional orbit models	MP		UE positioning GANSS additional orbit models 10.3.7.91e		REL-8

NOTE 1: The SV Health values are GNSS specific as identified by the GANSS ID :

GANSS	SV Health Bit String(6)					
	Bit 1 (MSB)	Bit 2	Bit 3	Bit 4	Bit 5	Bit 6 (LSB)
Modernized GPS SBAS	L1C Health [70]	L1 Health [68,69]	L2 Health [68,69]	L5 Health [68,69]	"0" (reserved)	"0" (reserved)
QZSS QZS-L1	Ranging On (0), Off(1) [71]	Corrections On (0), Off (1) [71]	Integrity On (0), Off(1) [71]	SV Health [72]	"0" (reserved)	"0" (reserved)
QZSS QZS-L1C/L2C/L5	L1C Health [72]	L1 Health [72]	L2 Health [72]	L5 Health [72]	"0" (reserved)	"0" (reserved)
GLONASS	B <sub>n</sub> (MSB) [73, page 23]			F <sub>T</sub> [73, Table 4.4]		"0" (reserved)

NOTE 2: The IOD values are GNSS specific as identified by the GANSS ID :

GANSS	IOD Bit String(11)										
	Bit 1 (MSB)	Bit 2	Bit 3	Bit 4	Bit 5	Bit 6	Bit 7	Bit 8	Bit 9	Bit 10	Bit 11 (LSB)
Modernized GPS SBAS	t <sub>oe</sub> (seconds, scale factor 300, range 0 – 604500) [68, 69, 70]										
QZSS QZS-L1	"0"	"0"	"0"	Issue of Data ([71], Message Type 9)							
QZSS QZS-L1C/L2C/L5	"0"	Issue of Data, Clock [72]									
QZSS QZS-L1C/L2C/L5	t <sub>oe</sub> (seconds, scale factor 300, range 0 – 604500) [72]										
GLONASS	"0"	"0"	"0"	"0"	t <sub>b</sub> (minutes, scale factor 15, range 0 – 1425) [73]						

### 10.3.7.95 UE positioning GPS real-time integrity

This IE contains parameters that describe the real-time status of the GPS constellation.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description

The logical levels 1 and 0 correspond to signal levels -1 and +1, respectively. N_BIT is the actual number of elements in Data bits: <math>1 \leq N\_BIT \leq 1024</math>.</p> <p>In case of Modernized GPS L1C, it contains the encoded and interleaved modulation symbols as defined in [70] section 3.2.3.1.</p> <p>In case of Modernized GPS L2C, it contains either the NAV data modulation bits, the FEC encoded NAV data modulation symbols, or the FEC encoded CNAV data modulation symbols, dependent on the current signal configuration of this satellite as defined in [68, Table 3-III].</p> <p>In case of Modernized GPS L5, it contains the FEC encoded CNAV data modulation symbols as defined in [69].</p> <p>In case of SBAS, it contains the FEC encoded data modulation symbols as defined in [71].</p> <p>In case of QZSS QZS-L1, it contains the NAV data modulation bits as defined in [72] section 5.2. In case of QZSS QZS-L1C, it contains the encoded and interleaved modulation symbols as defined in [72] section 5.3. In case of QZSS QZS-L2C, it contains the encoded modulation symbols as defined in [72] section 5.5. In case of QZSS QZS-L5, it contains the</p>	REL-7 REL-8

				encoded modulation symbols as defined in [72] section 5.6. In case of GLONASS, it contains the 100 sps differentially Manchester encoded modulation symbols as defined in [73] section 3.3.2.2.
--	--	--	--	---

10.3.7.97c UE positioning GANSS UTC model

The UTC Model field contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
A <sub>1</sub>	MP		Bit string(24)	
A <sub>0</sub>	MP		Bit string(32)	
t <sub>ot</sub>	MP		Bit string(8)	
Δt <sub>LS</sub>	MP		Bit string(8)	
WN <sub>t</sub>	MP		Bit string(8)	
WN <sub>LSF</sub>	MP		Bit string(8)	
DN	MP		Bit string(8)	
Δt <sub>LSF</sub>	MP		Bit string(8)	

For a GANSS Id referring to Galileo, the definition and the unit of the elements are provided in [61].

10.3.7.97d UE positioning GANSS additional UTC models

This element contains contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID.

### 10.3.7.106 UE positioning OTDOA neighbour cell info

This IE gives approximate cell timing in order to decrease the search window.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
CHOICE mode	MP			
>FDD				
>>Primary CPICH info	MP		Primary CPICH info	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
>TDD			10.3.6.60	
>>cell and channel ID	MP		Cell and Channel Identity info 10.3.6.8a	Identifies the channel to be measured on.
Frequency info	MD		Frequency info 10.3.6.36	Default value is the existing value of frequency information
IPDL parameters	CV-IPDLs		UE positioning IPDL parameters 10.3.7.98	
SFN offset	MP		Integer (0 .. 4095)	Although this IE is not always required, need is MP to align with ASN.1. Define Tref as the time of beginning of system frame number SFNref of the reference cell. Define Tnc as the beginning of a frame from the neighbour cell occurring immediately after the time Tref. Let the corresponding system frame number be SFNnc. Then SFNnc = SFNref-SFN offset modulo 4096.
SFN offset validity	MD		Enumerated (FALSE)	Absence of this element means SFN offset is valid. FALSE means SFN offset is not valid.
SFN-SFN relative time difference	MP		Integer(0..38399)	Gives the relative timing compared to the reference cell. Equal to $\lfloor (T_{nc} - T_{ref}) * (3.84 * 10^6) \rfloor$ where $\lfloor \cdot \rfloor$ denotes rounding to the nearest lower integer. In chips, Tnc = the time of beginning of a system frame from the neighbour cell, Tref = the time of beginning of a system frame from the reference cell.
SFN-SFN drift	OP		Integer (0, -1, -2, -3, -4, -5, -8, -10, -15, -25, -35, -50, -65, -80, -100, 1, 2, 3, 4, 5, 8, 10, 15, 25, 35, 50, 65, 80, 100)	in 1/256 chips per second
Search Window Size	MP		Integer(20, 40, 80, 160, 320, 640, 1280, infinity)	In chips. If the value is X then the expected SFN-SFN observed time difference is in the range [RTD-X, RTD+X] where RTD is the value of the field SFN-SFN relative time difference. Infinity means that the uncertainty is larger than 1280 chips.
CHOICE <i>PositioningMode</i>	MP			

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
>UE based				(no data)
>UE assisted				(no data)

Condition	Explanation
<i>IPDLs</i>	This IE is mandatory present if IPDLs are applied and not needed otherwise.

### 10.3.7.106a UE positioning OTDOA neighbour cell info for UE-based

This IE gives approximate cell timing in order to decrease the search window, as well as the cell locations and fine cell timing for UE based OTDOA.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
UE positioning OTDOA neighbour cell info	MP		UE positioning OTDOA neighbour cell info 10.3.7.106		
Cell Position	MD			Default is the same as previous cell	
>Relative North	OP		Integer(-20000..20000)	Seconds of angle, scale factor 0.03. Relative position compared to reference cell.	
>Relative East	OP		Integer(-20000..20000)	Seconds of angle, scale factor 0.03. Relative position compared to reference cell.	
>Relative Altitude	OP		Integer(-4000..4000)	Relative altitude in meters compared to ref. cell.	
Fine SFN-SFN	MP		Real(0..0.9375 in steps of 0.0625)	Gives finer resolution	
UE positioning Relative Time Difference Quality	MP		UE positioning OTDOA quality 10.3.7.109a	Quality of the relative time difference between neighbour and reference cell.	
Round Trip Time	OP		Real (876.00 .. 2923.875 in steps of 0.0625)	In chips. Included if cell is in active set.	
Round Trip Time Extension	CV-FDD		Real (0 .. 4392.125 in steps of 0.0625)	In chips. Included if cell is in active set. Default = 0. NOTE.	REL-7
NOTE: Total Round Trip Time = IE "Round Trip Time" + IE "Round Trip Time Extension".					

Condition	Explanation
<i>FDD</i>	The IE is optionally present in FDD, otherwise it is not needed.

### 10.3.7.107 UE positioning OTDOA quality

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Std Resolution	MP		Bit string(2)	Std Resolution field includes the resolution used in Std of OTDOA Measurements field.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
				Encoding on two bits as follows: '00' 10 meters '01' 20 meters '10' 30 meters '11' Reserved
Number of OTDOA Measurements	MP		Bit string(3)	The 'Number of OTDOA measurements' field indicates how many OTDOA measurements have been used in the UE to determine the sample standard deviation of the measurements. Following 3 bit encoding is used: '001' 5-9 '010' 10-14 '011' 15-24 '100' 25-34 '101' 35-44 '110' 45-54 '111' 55 or more Special case: '000': In this case the field 'Std of OTDOA measurements' contains the std of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$ , where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x. This std can be used irrespective of the number of measurements and reporting of the number of measurements is not needed. Also other measurements such as Ec/No or Rx levels can be utilised in this case to evaluate the 'Std of OTDOA measurements' reported in this IE.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Std of OTDOA Measurements	MP		Bit string(5)	Std of OTDOA Measurements field includes sample standard deviation of OTDOA measurements (when number of measurements is reported in 'Number of OTDOA measurements field') or standard deviation of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$ , where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x (when '000' is given in 'Number of OTDOA measurements' field). Following linear 5 bit encoding is used: '00000' 0 - (R*1-1) meters '00001' R*1 - (R*2-1) meters '00010' R*2 - (R*3-1) meters ... '11111' R*31 meters or more where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,...,620+ m.

### 10.3.7.108 UE positioning OTDOA reference cell info

This IE defines the cell used for time references in all OTDOA measurements.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
SFN	OP		Integer (0..4095)	Time stamp (SFN of Reference Cell) of the SFN-SFN relative time differences and SFN-SFN drift rates. Included if any SFN-SFN drift value is included in IE UE positioning OTDOA neighbour cell info.

>Horizontal with Vertical Velocity and Uncertainty			Horizontal with Vertical Velocity and Uncertainty 10.3.8.4k		REL-7
UE Positioning GPS ReferenceTime Uncertainty	<i>CV-Tutran-gps</i>		UE positioning GPS reference time uncertainty 10.3.7.96a		REL-7

Condition	Explanation
<i>Tutran-gps</i>	This IE is optionally present if "UTRAN GPS reference time" is included and not needed otherwise.

## 10.3.7.109a UE positioning Relative Time Difference quality

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Relative Time Difference Std Resolution	MP		Bit string(2)	Std Resolution field includes the resolution used in Std of Relative Time Difference field. Encoding on two bits as follows: '00' 10 meters '01' 20 meters '10' 30 meters '11' Reserved
Std of Relative Time Difference	MP		Bit string(5)	Std of Relative Time difference field includes standard deviation of (SFN-SFN relative time difference + Fine SFN-SFN). Following linear 5 bit encoding is used: '00000' 0 - (R*1-1) meters '00001' R*1 - (R*2-1) meters '00010' R*2 - (R*3-1) meters ... '11111' R*31 meters or more where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m, ..., 620+ m.

## 10.3.7.110 UE positioning reporting criteria

The triggering of the event-triggered reporting for a UE positioning measurement.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Parameters required for each event	MP	1 to <maxMeas Event>		Note: need corrected to MP in Rel-7 to align with ASN.1.	
>Amount of reporting	MP		Integer(1, 2, 4, 8, 16, 32, 64,infinite)		
>Report first fix	MP		Boolean	If TRUE the UE reports the position once the measurement control is received, and then each time an event is triggered.	
>Measurement interval	MP		Integer(5,15,60,300,900,1800,3600,7200)	Indicates how often the UE should make the measurement In seconds	
>CHOICE Event ID	MP				
>>7a					
>>>Threshold Position Change	MP		Integer(10, 20,30,40,50,100,200,300,500,1000,2000,5000,10000,20000,50000,100000)	Meters. Indicated how much the position should change compared to last reported position fix in order to trigger the event.	
>>7b					
>>>Threshold SFN-SFN change	MP		Real(0.25, 0.5,1,2,3,4, 5,10,20,50, 100,200,500,1000,2000,5000)	Chips. Indicates how much the SFN-SFN measurement of ANY measured cell is allowed to change before the event is triggered.	
>>7c					
>>>Threshold SFN-GPS TOW	MP		Integer(1,2,3,5,10,20, 50,100)	Time in ms. When the GPS TOW and SFN timer has drifted apart more than the specified value the event is triggered.	
				Time in micro seconds (NOTE 1).	REL-7
>>7d					REL-7
>>>Threshold SFN-GANSS TOW	MP		Integer(1,2,3,5,10,20, 50,100)	Time in micro seconds. When the GANSS TOW and SFN timer has drifted apart more than the specified value the event is triggered.	REL-7
NOTE 1: In previous versions of the protocol, the IE "Threshold SFN-GPS TOW" was provided in units of milli seconds. If the information is provided in units of micro seconds, the UE shall ignore any information provided in units of milli seconds.					

### 10.3.7.111 UE positioning reporting quantity

The purpose of the element is to express the allowed/required location method(s), and to provide information desired QoS.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Method Type	MP		Enumerated(UE assisted, UE based,		

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
			UE based is preferred but UE assisted is allowed, UE assisted is preferred but UE based is allowed)		
Positioning Methods	MP		Enumerated(OTDOA, GPS, OTDOA or GPS, Cell ID)		
Response Time	MP		Integer(1,2,4, 8, 16, 32, 64, 128)	This IE shall be ignored.	
Horizontal Accuracy	CV- MethodType		Bit string(7)	The uncertainty is derived from the "uncertainty code" k by $r = 10 * (1.1^k - 1)$ in meters.	
Vertical Accuracy	CV- MethodType		Bit string(7)	The uncertainty is derived from the "uncertainty code" k by $r = 45 * (1.025^k - 1)$ in meters.	
GPS timing of Cell wanted	MP		Boolean	If TRUE the SRNC wants the UE to report the SFN-GPS timing of the reference cell. This is however optional in the UE.	
Multiple Sets	MP		Boolean	This IE shall be ignored.	
Additional Assistance Data Request	MP		Boolean	TRUE indicates that the UE is requested to send the IE "GPS Additional Assistance Data Request" and/or the IE "GANSS Additional Assistance Data Request" (if the IE 'GANSS Positioning Methods' is included) when the IE "UE positioning Error" is present in the UE positioning measured results. FALSE indicates that the UE shall use the assistance data available.	
Environment Characterisation	OP		Enumerated(possibly heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment)	One spare value is needed.	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
Velocity Requested	OP		Enumerated (TRUE)	If this element is present the UE is requested to send a velocity estimate	REL-7

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
GANSS Positioning Methods	OP		Bit string(16)	For each bit, if set to "1", indicates that respective GNSS is allowed. bit 0: GPS bit 1: Galileo bit 2-15: reserved for future GNSSes  Note 1	REL-7
				bit 2: SBAS (WAAS, EGNOS, MSAS, GAGAN) bit 3: Modernized GPS (L1C, L2C, L5) bit 4: QZSS bit 5: GLONASS bit 6-15: reserved for future GNSSes  Note 1	REL-8
GANSS timing of Cell wanted	OP		Bit string(8)	Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved. If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE.	REL-7
				Bit 1 is for Modernized GPS; Bit 2 is for QZSS; Bit 3 is for GLONASS; Other bits are reserved. If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE. If more than one bit is set to one, the UE will select the GANSS among the allowed GANSS for the SFN-GANSS timing of the reference cell in the measurement report.	Rel-8
GANSS Carrier-Phase Measurement Requested	OP		Bit string(8)	Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved. This is however optional in the UE.	REL-7
				Bit 1 is for SBAS; Bit 2 is for Modernized GPS; Bit 3 is for QZSS; Bit 4 is for GLONASS; Other bits are reserved. This is however optional in the UE.	Rel-8
GANSS Multi-frequency Measurement Requested	OP		Bit String(8)	Each bit refers to a GANSS. Bit 0 is for Galileo;	REL-8

Information Element/Group name	Need	Multi	Type and Reference	Semantics description	Version
				Bit 1 is for SBAS; Bit 2 is for Modernized GPS; Bit 3 is for QZSS; Bit 4 is for GLONASS; Other bits are reserved. This is however optional in the UE.	

Condition	Explanation
<i>Method Type</i>	The IE is optional if the IE "Method Type" is "UE assisted"; otherwise it is mandatory present.

NOTE 1: Bit 0 of this bitmap shall not be the only one set to 1.

### 10.3.7.112 $T_{ADV}$ info

NOTE: Only for 1.28 Mcps TDD.

$T_{ADV}$  indicates the difference between the Rx timing and Tx timing of a UE.

Information Element/group name	Need	Multi	Type and reference	Semantics description	Version
$T_{ADV}$	MP		Integer (0..2047, 2048..8191)	As defined in [20].	REL-4 REL-7
SFN	MP		Integer(0..4095)	SFN during which the $T_{ADV}$ measurement was performed.	REL-4

### 10.3.7.113 UTRA priority info list

Contains priority based reselection information for UTRA.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UTRA Serving Cell	MP				REL-8
>priority	MP		Integer (0..<maxPrio-1>)	0 is the lowest priority and maxPrio-1 is the highest	REL-8
>S <sub>prioritysearch1</sub>	MP		Integer (0..62 by step of 2)	dB	REL-8
>S <sub>prioritysearch2</sub>	MD		Integer (0..7 by step of 1)	dB, default value is 0	REL-8
>Thresh <sub>serv,low</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
UTRAN FDD Frequencies	OP	1 to <maxNumFDDFreqs>			REL-8
>UARFCN	MP		Integer(0..16383)		REL-8
>priority	MP		Integer (0..<maxPrio-1>)	0 is the lowest priority and maxPrio-1 is the highest.	REL-8
>Thresh <sub>x, high</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
>Thresh <sub>x, low</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
>QqualminFDD	MD		Integer (-24..0)	Ec/N0, [dB] Default value is Qqualmin for the serving cell	REL-8
>QrxlevminFDD	MD		Integer (-119..-25 by step of 2)	RSCP, [dBm] Default value is Qrxlevmin for the serving cell	REL-8
UTRAN TDD Frequencies	OP	1 to <maxNumTDDFreqs>			REL-8
>UARFCN	MP		Integer(0..16383)		REL-8
>priority	MP		Integer (0..<maxPrio-1>)	0 is the lowest priority and maxPrio-1 is the highest.	REL-8
>Thresh <sub>x, high</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
>Thresh <sub>x, low</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
>QrxlevminTDD	MD		Integer (-119..-25 by step of 2)	RSCP, [dBm] Default value is Qrxlevmin for the serving cell	REL-8

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

### 10.3.7.114 GSM priority info list

Contains priority based reselection information for GSM.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
GSM Priority Info	MP	1 to <maxNum GSMCellGroup>			REL-8
>GSM cell group List	MP		GSM cell group 10.3.7.9a		REL-8
>priority	MP		Integer (0..<maxPriority-1>)	0 is the lowest priority and maxPriority-1 is the highest.	REL-8
>QrxlevminGSM	MP		Integer (-115..-25 by step of 2)	GSM RSSI, [dBm]	REL-8
>Thresh <sub>x, high</sub>	MP		Integer (0..62 by step of 2)	GSM RSSI, dB	REL-8
>Thresh <sub>x, low</sub>	MP		Integer (0..62 by step of 2)	GSM RSSI, dB	REL-8

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

### 10.3.7.115 E-UTRA frequency and priority info list

Contains information about neighbour E-UTRA frequencies (with associated blacklists), together with priority based reselection information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
E-UTRA frequency and priority		1 to <maxNum EUTRAFreqs>			REL-8
>EARFCN	MP		Integer(0..65535)	EARFCN of the downlink carrier frequency [36.101]	REL-8
>Measurement Bandwidth	MD		Enumerated(6, 15, 25, 50, 75, 100)	Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, $N_{RB}$ [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6.	REL-8
>priority	MP		Integer (0..<maxPrio-1>)	0 is the lowest priority and maxPrio-1 is the highest.	REL-8
>QrxlevminEUTRA	MP		Integer (-140..-44 by step of 2)	RSRP, [dBm]	REL-8
>Thresh <sub>x, high</sub>	MP		Integer (0..62 by step of 2)	RSRP, dB	REL-8
>Thresh <sub>x, low</sub>	MP		Integer (0..62 by step of 2)	RSRP, dB	REL-8
>Blacklisted cells per freq list	OP	1 to <maxEUTRACellPerFreq>			REL-8
>>Physical Cell identity	MP		Integer (0..503)	A list of blacklisted cells can be signalled per frequency	REL-8
>E-UTRA detection	MP		Boolean	"TRUE" means that the UE may detect the presence of a E-UTRA cell and report to NAS. NOTE 1.	REL-8
NOTE 1: If the value of 'E-UTRA detection' is not identical across the frequency layers, UE behaviour is unspecified.					

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

## 10.3.8 Other Information elements

### 10.3.8.1 BCCH modification info

Indicates modification of the System Information on BCCH.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
MIB Value tag	MP		MIB Value tag 10.3.8.9	
BCCH modification time	OP		Integer (0..4088 in step of 8)	All SFN values in which MIB may be mapped are allowed.

### 10.3.8.2 BSIC

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Base transceiver Station Identity Code (BSIC)	MP			[11]
>Network Colour Code (NCC)	MP		bit string(3)	The first/leftmost bit of the bit string contains the most significant bit of the NCC.
>Base Station Colour Code (BCC)	MP		bit string(3)	The first/leftmost bit of the bit string contains the most significant bit of the BCC.

### 10.3.8.3 CBS DRX Level 1 information

This information element contains the CBS discontinuous reception information to be broadcast for CBS DRX Level 1 calculations in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Period of CTCH allocation (N)	MP		Integer (1..256)	$M_{TTI} \leq N \leq 256$ , N multiple of $M_{TTI}$	
CBS frame offset (K)	MP		Integer (0..255)	$0 \leq K \leq N-1$ , K multiple of $M_{TTI}$	
Period of BMC scheduling messages (P)	CV-SIB5		Integer (8, 16, 32, 64, 128, 256)		REL-6

Condition	Explanation
SIB5	The IE is optional when the IE "CBS DRX Level 1 information" in SIB5, otherwise the IE is not needed

### 10.3.8.4 Cell Value tag

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cell Value tag	MP		Integer (1..4)	

## 10.3.8.4a Ellipsoid point

This IE contains the description of an ellipsoid point as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Latitude sign	MP		Enumerated (North, South)	
Degrees Of Latitude	MP		Integer (0...2 <sup>23</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ <i>X</i> being the latitude in degree (0°.. 90°)
Degrees Of Longitude	MP		Integer (-2 <sup>23</sup> ...2 <sup>23</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ <i>X</i> being the longitude in degree (-180°..+180°)

## 10.3.8.4b Ellipsoid point with Altitude

This IE contains the description of an ellipsoid point with altitude as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Latitude sign	MP		Enumerated (North, South)	
Degrees Of Latitude	MP		Integer (0...2 <sup>23</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ <i>X</i> being the latitude in degree (0°.. 90°)
Degrees Of Longitude	MP		Integer (-2 <sup>23</sup> ...2 <sup>23</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ <i>X</i> being the longitude in degree (-180°..+180°)
Altitude Direction	MP		Enumerated (Height, Depth)	
Altitude	MP		Integer (0..2 <sup>15</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq a < N+1$ <i>a</i> being the altitude in metres

## 10.3.8.4c Ellipsoid point with Altitude and uncertainty ellipsoid

This IE contains the description of an ellipsoid point with altitude and uncertainty ellipsoid as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Latitude sign	MP		Enumerated (North, South)	
Degrees Of Latitude	MP		Integer (0...2 <sup>23</sup> -1)	The IE value ( <i>N</i> ) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ <i>X</i> being the latitude in degree (0°.. 90°)

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Degrees Of Longitude	MP		Integer (- $2^{23} \dots 2^{23}-1$ )	The IE value ( $N$ ) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ $X$ being the longitude in degree (-180° ..+180°)
Altitude Direction	MP		Enumerated (Height, Depth)	
Altitude	MP		Integer (0.. $2^{15}-1$ )	The IE value ( $N$ ) is derived by this formula: $N \leq a < N+1$ $a$ being the altitude in metres
Uncertainty semi-major	MP		Integer (0...127)	The uncertainty $r$ is derived from the "uncertainty code" $k$ by $r = 10x(1.1^k-1)$
Uncertainty semi-minor	MP		Integer (0...127)	The uncertainty $r$ is derived from the "uncertainty code" $k$ by $r = 10x(1.1^k-1)$
Orientation of major axis	MP		Integer (0..89)	The IE value ( $N$ ) is derived by this formula: $2N \leq a < 2(N+1)$ $a$ being the orientation in degree (0° .. 179°)
Uncertainty Altitude	MP		Integer(0..127)	The uncertainty in altitude, $h$ , expressed in metres is mapped from the IE value ( $K$ ), with the following formula: $h = C \left( (1+x)^K - 1 \right)$ with $C = 45$ and $x = 0.025$ .
Confidence	MP		Integer (0..100)	in percentage

#### 10.3.8.4d Ellipsoid point with uncertainty Circle

This IE contains the description of an ellipsoid point with an uncertainty circle as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Latitude sign	MP		Enumerated (North, South)	
Degrees Of Latitude	MP		Integer (0... $2^{23}-1$ )	The IE value ( $N$ ) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ $X$ being the latitude in degree (0° .. 90°)
Degrees Of Longitude	MP		Integer (- $2^{23} \dots 2^{23}-1$ )	The IE value ( $N$ ) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ $X$ being the longitude in degree (-180° ..+180°)
Uncertainty Code	MP		Integer (0...127)	The uncertainty $r$ is derived from the "uncertainty code" $k$ by $r = 10x(1.1^k-1)$

## 10.3.8.4e Ellipsoid point with uncertainty Ellipse

This IE contains the description of an ellipsoid point with an uncertainty ellipse as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Latitude sign	MP		Enumerated (North, South)	
Degrees Of Latitude	MP		Integer (0...2 <sup>23</sup> -1)	The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°)
Degrees Of Longitude	MP		Integer (-2 <sup>23</sup> ...2 <sup>23</sup> -1)	The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180° ..+180°)
Uncertainty semi-major	MP		Integer (0...127)	The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by $r = 10x(1.1^k - 1)$
Uncertainty semi-minor	MP		Integer (0...127)	The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by $r = 10x(1.1^k - 1)$
Orientation of major axis	MP		Integer (0..89)	The IE value (N) is derived by this formula: $2N \leq a < 2(N+1)$ <i>a</i> being the orientation in degree (0°.. 179°)
Confidence	MP		Integer (0..100)	in percentage

## 10.3.8.4ea ETWS information

Indication of an ETWS primary notification. The ETWS warning type is used to notify upper layers.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Warning Type	MP		Octet string (1..2)	IE "Warning Type" as defined in [77]	REL-8
Message Identifier	MP		Octet string (2)	IE "Message Identifier" as defined in [77]	REL-8
Serial Number	MP		Octet string (2)	IE "Serial Number" as defined in [77]	REL-8

## 10.3.8.4eb ETWS warning security information

Security information used to confirm an ETWS primary notification.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
ETWS warning security information	OP		Octet string	IE "Warning Security Information" as defined in [77]	REL-8

## 10.3.8.4f GERAN system information

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>>> GERAN System Info	MP	1 to <maxGERAN SI>			REL-5
>>>> GERAN system info block	MP		Octet string(1..23)	The first octet contains octet 1 of the GERAN system information block, the second octet contains octet 2 of the GERAN system information block and so on.	REL-5

## 10.3.8.4g GSM Target Cell Info

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
GSM Target Cell Info List	MP	1 to <maxGSMTargetCells>			REL-6
>BCCH ARFCN	MP		Integer (0..1023)	[45]	REL-6
>Band indicator	MP		Enumerated (DCS 1800 band used, PCS 1900 band used)	Indicates how to interpret the BCCH ARFCN	REL-6
>BSIC	OP		BSIC 10.3.8.2		REL-6

## 10.3.8.4h Horizontal Velocity

This IE contains the description of a horizontal velocity as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Bearing	MP		Integer (0...359)	The direction of movement is given in degrees where "0" represents North, "90" represents East, etc.
Horizontal Speed	MP		Integer (0... $2^{11}-1$ )	The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$ , for (N=0) $N-0.5 \leq h < N + 0.5$ , for (0<N< $2^{11}-1$ ) $N - 0.5 \leq h$ , for (N = $2^{11}-1$ )

## 10.3.8.4i Horizontal with Vertical Velocity

This IE contains the description of horizontal with vertical velocity as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Vertical Speed direction	MP		ENUMERATED (upward, downward)	

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Bearing	MP		Integer (0...359)	The direction of movement is given in degrees where "0" represents North, "90" represents East, etc.
Horizontal Speed	MP		Integer ( $0 \dots 2^{11} - 1$ )	The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$ , for (N=0) $N - 0.5 \leq h < N + 0.5$ , for ( $0 < N < 2^{11} - 1$ ) $N - 0.5 \leq h$ , for (N = $2^{11} - 1$ )
Vertical Speed	MP		Integer (0..255)	The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula: $N \leq v < N + 0.5$ , for (N=0) $N - 0.5 \leq v < N + 0.5$ , for ( $0 < N < 2^8 - 1$ ) $N - 0.5 \leq v$ , for (N = $2^8 - 1$ )

#### 10.3.8.4j Horizontal Velocity with Uncertainty

This IE contains the description of horizontal velocity with uncertainty as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Bearing	MP		Integer (0...359)	The direction of movement is given in degrees where "0" represents North, "90" represents East, etc.
Horizontal Speed	MP		Integer ( $0 \dots 2^{11} - 1$ )	The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$ , for (N=0) $N - 0.5 \leq h < N + 0.5$ , for ( $0 < N < 2^{11} - 1$ ) $N - 0.5 \leq h$ , for (N = $2^{11} - 1$ )
Horizontal Uncertainty Speed	MP		Integer (0..255)	The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified

#### 10.3.8.4k Horizontal with Vertical Velocity and Uncertainty

This IE contains the description of horizontal with vertical velocity and uncertainty as in [24].

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Vertical Speed direction	MP		ENUMERATED (upward, downward)	
Bearing	MP		Integer (0...359)	The direction of movement is given in degrees where "0" represents North, "90" represents East, etc.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
Horizontal Speed	MP		Integer (0...2 <sup>11</sup> -1)	The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$ , for (N=0) $N - 0.5 \leq h < N + 0.5$ , for (0 < N < 2 <sup>11</sup> -1) $N - 0.5 \leq h$ , for (N = 2 <sup>11</sup> -1)
Vertical Speed	MP		Integer (0..255)	The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula: $N \leq v < N + 0.5$ , for (N=0) $N - 0.5 \leq v < N + 0.5$ , for (0 < N < 2 <sup>8</sup> -1) $N - 0.5 \leq v$ , for (N = 2 <sup>8</sup> -1)
Horizontal Uncertainty Speed	MP		Integer (0..255)	The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified
Vertical Uncertainty Speed	MP		Integer (0..255)	The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified

#### 10.3.8.4L E-UTRA Target Info

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
E-UTRA Target Frequency Info List	MP	1 to <maxEUTRA TargetFreqs>			REL-8
>DL Carrier frequency	MP		Integer (0..65535)	EARFCN of the downlink carrier frequency [63]	REL-8
>Blacklisted cells per freq list	OP	1 to <maxEUTRA CellPerFreq>			REL-8
>>Physical Cell identity	MP		Integer (0..503)		REL-8

#### 10.3.8.4m HNB Name

This information element is used to carry the name of the home NodeB, coded in UTF-8 with variable number of bytes per character [75].

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
--------------------------------	------	-------	--------------------	-----------------------	---------

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HNB Name	MP		Octet string (1 to < maxHNBNameSize>)	Carries the name of the Home NodeB with a maximum of maxHNBNameSize octets, using UTF-8 coding.	REL-8

### 10.3.8.5 Inter-RAT change failure

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT change failure cause	MP		Enumerated( Configuration unacceptable, physical channel failure, protocol error, unspecified)	Four spare values are needed.
Protocol error information	CV-ProtErr		Protocol error information 10.3.8.12	

Condition	Explanation
<i>ProtErr</i>	The IE is mandatory present if the IE "Inter-RAT change failure cause" has the value "Protocol error" and not needed otherwise.

### 10.3.8.6 Inter-RAT handover failure

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Inter-RAT handover failure cause	MD		Enumerated( Configuration unacceptable, physical channel failure, protocol error, inter-RAT protocol error, unspecified)	Default value is "unspecified". Eleven spare values are needed.
Protocol error information	CV-ProtErr		Protocol error information 10.3.8.12	

Condition	Explanation
<i>ProtErr</i>	The IE is mandatory present if the IE "Inter-RAT handover failure cause" has the value "Protocol error" and not needed otherwise.

## 10.3.8.7 Inter-RAT UE radio access capability

This Information Element contains the inter-RAT UE radio access capability that is structured and coded according to the specification used for the corresponding system type.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>system</i>	MP				
>GSM					
>>Mobile Station Classmark 2	MP		Octet string (5)	This IE is formatted as 'TLV' and is coded in the same way as the <i>Mobile Station Classmark 2</i> information element in [5]. The first octet is the <i>Mobile station classmark 2 IEI</i> and its value shall be set to 33H (except in the case of NOTE 2). The second octet is the <i>Length of mobile station classmark 2</i> and its value shall be set to 3. The octet 3 contains the first octet of the value part of the <i>Mobile Station Classmark 2</i> information element, the octet 4 contains the second octet of the value part of the <i>Mobile Station Classmark 2</i> information element and so on. For each of these octets, the first/leftmost/ most significant bit of the octet contains b8 of the corresponding octet of the <i>Mobile Station Classmark 2</i> . See NOTE 2.	
>>Mobile Station Classmark 3	MP		Octet string (1..32)	This IE is formatted as 'V' and is coded in the same way as the value part in the <i>Mobile station classmark 3</i> information element in [5]. The first octet contains octet 1 of the value part of <i>Mobile station classmark 3</i> , the second octet contains octet 2 of the value part of <i>Mobile station classmark 3</i> and so on. See NOTE 1, NOTE 2.	
>>MS Radio Access Capability	OP		Octet string (1..64)	This IE is formatted as 'V' and is coded in the same way as the value part in the <i>MS Radio Access Capability</i> information element in [5].	REL-6
>GERAN Iu					REL-5
>>MS GERAN Iu mode Radio Access Capability	MP		Bit string (1..170)	Formatted and coded according to [53]. The first/leftmost/most significant bit of the bit string contains bit 8 of the first octet of the IE.	REL-5
>cdma2000					
>>cdma2000Message	MP	1.to.<maxInterSystemMessages>			
>>>MSG_TYPE(s)	MP		Bit string (8)	Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the MSG_TYPE.	
>>>cdma2000MessagePayload(s)	MP		Bit string (1..512)	Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the first octet of the cdma2000 message.	
>E-UTRA					REL-8
>>UE E-UTRA Capability	MP		Octet string	Formatted and coded according to the <i>UE-EUTRA-Capability</i> information element in [67]. The first/leftmost/most significant bit of the first octet of the octetstring contains bit 8 of octet 1 of the	REL-8

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
				<i>UE-EUTRA-Capability IE.</i>	
NOTE 1: The value part is specified by means of CSN.1, which encoding results in a bit string, to which final padding may be appended upto the next octet boundary [5]. The first/ leftmost bit of the CSN.1 bit string is placed in the first/ leftmost/ most significant bit of the first octet. This continues until the last bit of the CSN.1 bit string, which is placed in the last/ rightmost/ least significant bit of the last octet.					
NOTE 2: The information in these IEs is optionally present in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, otherwise it is mandatory present. If the information in the IEs "Mobile Station Classmark 2" and "Mobile Station Classmark 3" is not included, it is indicated by setting the first octet (IEI) of the IE "Mobile Station Classmark 2" to 00H. In this case, the receiver should ignore the value parts of the <i>Mobile Station Classmark 2</i> and the <i>Mobile Station Classmark 3</i> . The contents of those are set to zero.					

### 10.3.8.8 Void

#### 10.3.8.8a Inter-RAT UE security capability

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>system</i>	MP				
>GSM					
>>GSM security capability	MP			The value TRUE means that the indicated ciphering algorithm is supported.	
>>>A5/7 supported	MP		Boolean		
>>>A5/6 supported	MP		Boolean		
>>>A5/5 supported	MP		Boolean		
>>>A5/4 supported	MP		Boolean		
>>>A5/3 supported	MP		Boolean		
>>>A5/2 supported	MP		Boolean		
>>>A5/1 supported	MP		Boolean		

### 10.3.8.9 MIB Value tag

Information Element/Group name	Need	Multi	Type and reference	Semantics description
MIB Value tag	MP		Integer (1..8)	

### 10.3.8.10 PLMN Value tag

Information Element/Group name	Need	Multi	Type and reference	Semantics description
PLMN Value tag	MP		Integer (1..256)	

### 10.3.8.10a PNBSCH allocation

UTRAN may use this IE to provide silent periods in the cell that may be used for cell synchronisation purposes.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Number of repetitions per SFN period	MP		Integer(2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 14, 16, 18, 20, 24, 28, 32, 36, 40, 48, 56, 64, 72, 80)		REL-4

### 10.3.8.11 Predefined configuration identity and value tag

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Predefined configuration identity	MP		Predefined configuration identity 10.3.4.5	
Predefined configuration value tag	MP		Predefined configuration value tag 10.3.4.6	

### 10.3.8.12 Protocol error information

This information element contains diagnostics information returned by the receiver of a message that was not completely understood.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>diagnostics type</i> >Protocol error cause	MP		Protocol error cause 10.3.3.26	One spare value is needed.

## 10.3.8.13 References to other system information blocks

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
References to other system information blocks	MP	1 to <maxSIB>		System information blocks for which multiple occurrences are used, may appear more than once in this list	
>Scheduling information	MP		Scheduling information, 10.3.8.16		
>SIB type SIBs only	MP		SIB Type SIBs only, 10.3.8.22		
References to other extension system information blocks	OP	1 to <maxSIB>		System information blocks for which multiple occurrences are used, may appear more than once in this list	REL-6
>Scheduling information	MP		Scheduling information, 10.3.8.16		REL-6

>BAND_CLASS	MP		Bit string(5 bits)	TIA/EIA/IS-2000 When mapping the BAND_CLASS to the bit string, the first/leftmost bit of the bit string contains the most significant bit..	
>CDMA_FREQ	MP		Bit string (11 bits)	TIA/EIA/IS-2000 When mapping the CDMA_FREQ to the bit string,	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
				the first/leftmost bit of the bit string contains the most significant bit..	

### 10.3.8.16 Scheduling information

Information Element/Group name	Need	Multi	Type and reference	Semantics description
CHOICE <i>Value tag</i>	OP			
>PLMN Value tag			PLMN Value tag 10.3.8.10	This IE is included if the following conditions are fulfilled: the SIB type equals system information block type 1 Note: IE "PLMN value tag" is used for SIB1 but the area scope for SIB 1 is Cell.
>Predefined configuration identity and value tag			Predefined configuration identity and value tag 10.3.8.11	This IE is included if the following conditions are fulfilled: the SIB type equals system information block type 16
>Cell Value tag			Cell Value tag 10.3.8.4	This IE is included if the following conditions are fulfilled: the SIB type does not equal system information block type 1; and the area scope for the system information block is set to "cell" in table 8.1.1; and a value tag is used to indicate changes in the system information block.
>SIB occurrence identity and value tag			SIB occurrence identity and value tag 10.3.8.20b	This IE is included if the following conditions are fulfilled: the SIB type equals system information block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis
Scheduling	MP			
>SEG_COUNT	MD		SEG COUNT 10.3.8.17	Default value is 1
>SIB_REP	MP		Integer (4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096)	Repetition period for the SIB in frames
>SIB_POS	MP		Integer (0 ..Rep-2 by step of 2)	Position of the first segment Rep is the value of the SIB_REP IE
>SIB_POS offset info	MD	1..15		see below for default value
>>SIB_OFF	MP		Integer(2..32 by step of 2)	Offset of subsequent segments

Field	Default value
SIB_POS offset info	The default value is that all segments are consecutive, i.e., that the SIB_OFF = 2 for all segments except when MIB segment/complete MIB is scheduled to be transmitted in between segments from same SIB. In that case, SIB_OFF=4 in between segments which are scheduled to be transmitted at $SFN_{prime} = 8 * n - 2$ and $8 * n + 2$ , and SIB_OFF=2 for the rest of the segments.

### 10.3.8.17 SEG COUNT

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SEG_COUNT	MP		Integer (1..16)	Number of segments in the system information block

### 10.3.8.18 Segment index

Each system information segment has an individual segment index.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Segment index	MP		Integer (1..15)	Segments of a system information block are numbered starting with 0 for the first segment and 1 for the next segment, which can be the first subsequent segment or a last segment.

### 10.3.8.18a SIB and SB type

The SIB type identifies a specific system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB and SB type	MP		Enumerated, see below	Two spare values are needed

List of enumerated values	Version
System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18, Scheduling Block 1, Scheduling Block 2,	
System Information Type 5bis	REL-6

### 10.3.8.18b SIB type extension

The SIB type identifies a specific extension system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
SIB type extension	MP		Enumerated, see below		REL-6

List of enumerated values	Version
System Information Type 11bis	REL-6
System Information Type 15bis, System Information Type 15.1bis, System Information Type 15.2bis, System Information Type 15.3bis, System Information Type 15.6, System Information Type 15.7 System Information Type 15.8	REL-7

### 10.3.8.18c SIB type extension2

The SIB type identifies a specific extension system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
SIB type extension2	MP		Enumerated, see below	Five spare values are needed	REL-8

List of enumerated values	Version
System Information Type 19	REL-8
System Information Type 15.2ter	
System Information Type 20	

### 10.3.8.18d GANSS SIB type

The GANSS SIB type identifies a GANSS specific system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
GANSS SIB type	MP		Enumerated, see below	Nine spare value is needed	REL-8

List of enumerated values	Version
System Information Type 15.1bis, System Information Type 15.2bis, System Information Type 15.2ter, System Information Type 15.3bis, System Information Type 15.6, System Information Type 15.7 System Information Type 15.8	REL-8

### 10.3.8.19 SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB data fixed	MP		Bit string (222)	The first bit contains the first bit of the segment.

### 10.3.8.20 SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB data variable	MP		Bit string (1..214)	The first bit contains the first bit of the segment.

### 10.3.8.20a SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB occurrence identity	MP		Integer (0..15)	

## 10.3.8.20b SIB occurrence identity and value tag

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB occurrence identity	MP		SIB occurrence identity 10.3.8.20a	
SIB occurrence value tag	MP		SIB occurrence value tag 10.3.8.20c	

## 10.3.8.20c SIB occurrence value tag

This information element is used to identify different versions of SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis.

Information Element/Group name	Need	Multi	Type and Reference	Semantics description
SIB occurrence value tag	MP		Integer(0..15)	

## 10.3.8.21 SIB type

The SIB type identifies a specific system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB type	MP		Enumerated, see below	NOTE 1
NOTE 1: If the value "Extension Type" is signalled, the UE shall use the scheduling information in the MIB and, if present, in the SB1 and SB2 to identify the specific type of system information block.				

List of enumerated values	Version
Master information block, System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18, Scheduling Block 1, Scheduling Block 2,	
System Information Type 5bis, Extension Type	REL-6

### 10.3.8.22 SIB type SIBs only

The SIB type identifies a specific system information block.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SIB type SIBs only	MP		Enumerated, see below	Four spare values are needed

List of enumerated values	Version
System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18,	
System Information Type 5bis	REL-6

### 10.3.8.23 UE History Information

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE inactivity period	MP		Integer (1..120)	Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more.	REL-8
UE Mobility State indicator	OP		Enumerated (High-mobilityDetected)	Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE.	REL-8
UL data volume history	OP		Data volume history 10.3.8.24		REL-8
DL data volume history	OP		Data volume history 10.3.8.24		REL-8

## 10.3.8.24 Data volume history

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
Data volume monitoring window	MP		Integer (1..120)	If the integer value x is between 1 and 59, it represents seconds. If the integer value is between 60 and 120, it represents the the value minus 59 in minutes.	REL-8
Data transmission frequency	OP		Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000)	In ms	REL-8
>Data transmission frequency granularity	MP		Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000)	In ms	REL-8
>Number of data transmission occasions	MP		Integer (0..610)	Measure of data transmission frequency. The data volume monitoring window is organised in time periods of 'Data transmission frequency granularity', and each transmission within such a period is counted.	REL-8
Data volume per RB	OP	1 to <maxRB>			REL-8
>RB identity	MP		RB identity 10.3.4.16		REL-8
>Data volume	MP		Integer (0..4294967295)	Data volume monitored during the data volume monitoring window, in byte.	REL-8

## 10.3.9 ANSI-41 Information elements

## 10.3.9.1 ANSI-41 Core Network Information

Information element/Group name	Need	Multi	Type and reference	Semantics description
P_REV	MP		P_REV 10.3.9.10	
MIN_P_REV	MP		MIN_P_REV 10.3.9.8	
SID	MP		SID 10.3.9.11	
NID	MP		NID 10.3.9.9	

## 10.3.9.2 ANSI-41 Global Service Redirection information

This Information Element contains ANSI-41 Global Service Redirection information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
ANSI-41 Global Service Redirection information	MP		ANSI-41 NAS parameter, 10.3.9.3	Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41"

### 10.3.9.3 ANSI-41 NAS parameter

This Information Element contains ANSI-41 User Zone Identification information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
ANSI-41 NAS parameter	MP		Bit string (size (1..2048))	The first bit contains the first bit of the ANSI-41 information.

### 10.3.9.4 ANSI-41 NAS system information

This Information Element contains ANSI-41 system information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
NAS (ANSI-41) system information	MP		ANSI-41 NAS parameter, 10.3.9.3	Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41"

### 10.3.9.5 ANSI-41 Private Neighbour List information

This Information Element contains ANSI-41 Private Neighbour List information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
ANSI-41 Private Neighbour List information	MP		ANSI-41 NAS parameter, 10.3.9.3	Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41"

### 10.3.9.6 ANSI-41 RAND information

This Information Element contains ANSI-41 RAND information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
ANSI-41 RAND information	MP		ANSI-41 NAS parameter, 10.3.9.3	Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41"

### 10.3.9.7 ANSI-41 User Zone Identification information

This Information Element contains ANSI-41 User Zone Identification information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
ANSI-41 User Zone Identification information	MP		ANSI-41 NAS parameter, 10.3.9.3	Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41"

### 10.3.9.8 MIN\_P\_REV

This Information Element contains minimum protocol revision level.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
MIN_P_REV	MP		Bit string (8)	Minimum protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the MIN_P_REV.

### 10.3.9.9 NID

This Information Element contains Network identification.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
NID	MP		Bit string (16)	Network identification. The first/leftmost bit of the bit string contains the most significant bit of the NID.

### 10.3.9.10 P\_REV

This Information Element contains protocol revision level.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
P_REV	MP		Bit string (8)	Protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the P_REV.

### 10.3.9.11 SID

This Information Element contains System identification.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SID	MP		Bit string (15)	System identification. The first/leftmost bit of the bit string contains the most significant bit of the SID.

## 10.3.9a MBMS Information elements

### 10.3.9a.1 MBMS Common CTrCh identity

Identifies a Coded Composite Transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Common CTrCh identity	MP		Integer (1..32)		REL-6

### 10.3.9a.2 MBMS Common PhyCh identity

Identifies a physical channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Common PhyCh identity	MP		Integer (1..32)		REL-6

### 10.3.9a.3 MBMS Common RB identity

Identifies a radio bearer channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Common RB identity	MP		Integer (1..32)		REL-6

### 10.3.9a.4 MBMS Common TrCh identity

Identifies a transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Common TrCh identity	MP		Integer (1..32)		REL-6

### 10.3.9a.5 MBMS Current cell S-CCPCH identity

Identifies one of the current cell's Secondary CCPCH's.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Current cell S-CCPCH identity	MP		Integer (1..maxSC CPCH)		REL-6

### 10.3.9a.6 Void

## 10.3.9a.7 MBMS L1 combining schedule

Includes information about the MBMS L1 combining schedule.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS L1 combining cycle length	MP		Enumerated (32, 64, 128, 256, 512, 1024)	In number of radio frames	REL-6
MBMS L1 combining cycle offset	MD		Integer (0.. MBMS L1 combining cycle length - 4) by step of 4	Start of the L1 combining cycle (relative to the timing of the current cell) in number of radio frames. Default value is no offset	REL-6
MTCH L1- combining period list	MP	1 to < maxMBMS-L1CP>		One or more periods in which L1 combining is performed	REL-6
>Start	MP		Integer (0.. MBMS L1 combining cycle length - 4) by step of 4	Number of frames from the end of the previous combining period or the start of the cycle (for the first period)	REL-6
>Duration	MP		Integer (4.. MBMS L1 combining cycle length) by step of 4	Number of frames (see note)	REL-6

NOTE: The MTCH L1- combining period should indicate one or more complete TTIs.

## 10.3.9a.7o MBMS p-t-m activation time

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS p-t-m activation time	MP		Integer (0..2047)	The 11 LSB of the SFN. Note 1 and 2.	REL-6
Note 1:	The 'MBMS p-t-m activation time' indicates the start of the 10 ms frame corresponding to the indicated SFN value and of the primary CCPCH of the cell where this IE is transmitted.				
Note 2:	The range of the 'MBMS p-t-m activation time' is from 10 ms after the beginning of the MCCH modification period wherein it is transmitted and to the end of next following MCCH modification period. The UE shall consider a value out of this range as expired.				

## 10.3.9a.7a MBMS p-t-m RB information

Includes information about an MBMS p-t-m radio bearers mapped on a TrCH.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
RB information	<i>CV-Curr</i>		MBMS Common RB identity 10.3.9a.3		REL-6
MBMS short transmission ID	MP		MBMS Short transmission identity 10.3.9a.10		REL-6
MBMS logical channel identity	MP		Integer (1..15)	This identifier is used to distinguish different MTCH mapped on to a TrCh ('MBMS-Id' within the MAC header[15])	REL-6
L1 combining status	<i>CV-Neigh</i>		Boolean	The IE is only applicable in case of partial L1 combining, in which case value TRUE means that L1 combining is used for this radio bearer	REL-6

Condition	Explanation
<i>Curr</i>	The IE is mandatory present if the IE 'MBMS p-t-m RB information list' is included in the MBMS CURRENT CELL P-T-M RB INFORMATION message and not needed otherwise
<i>Neigh</i>	The IE is mandatory present if the IE 'MBMS p-t-m RB information list' is included in the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message and not needed otherwise

## 10.3.9a.7b MBMS Selected Service Info

This IE indicates whether the UE has any MBMS Selected Services, and if it does it includes the list of MBMS Selected Services.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>Status</i>					
>None				(no data)	
>Some	MP		MBMS Selected Services Full 10.3.9a.7c		REL-6

### 10.3.9a.7c MBMS Selected Services Full

This IE provides the MBMS Selected Services by means of the full identity.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Selected Services	MP	1 to <maxMBMSservSelect>			REL-6
>MBMS Selected Service ID	MP		MBMS service identity 10.3.9a.8		REL-6

### 10.3.9a.7d MBMS Selected Services Short

This IE indicates the MBMS Selected Services by means of a short identity to identify the MBMS transmission by referencing the services included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Selected Services	MP	1 to <maxMBMSservSelect>			REL-6
>MBMS Selected Service ID	MP		MBMS Short transmission identity 10.3.9a.10		REL-6
Modification period identity	MP		Integer (0..1)	Indicates the modification period the MBMS short transmission identities refer to	REL-6

### 10.3.9a.8 MBMS Service identity

Includes information about the identity of an MBMS service.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Service ID	MP		MBMS Service ID 10.3.9a.8a		REL-6
CHOICE <i>PLMN identity</i>	MP				REL-6
> <i>SameAsMIB</i>				(No data) The PLMN identity is the same as indicated by the IE 'PLMN identity' in MIB	REL-6
> <i>SameAsMIB-MultiPLMN-Id</i>					REL-6
>>Multi PLMN id	MP		Integer (1..5)	The PLMN identity is one of the PLMN identities (1 to 5) in the IE "Multiple PLMN List" in MIB	REL-6
> <i>ExplicitPLMN-Id</i>					REL-6
>>PLMN identity	MP		PLMN identity 10.3.1.11		REL-6

### 10.3.9a.8a MBMS Service ID

Uniquely identifies an MBMS bearer service within a PLMN.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Service ID	MP		Octet string (3)	The content of the MBMS Service ID field is coded as octets 3 to 5 of the IE <i>Temporary Mobile Group Identity</i> [5]	REL-6

### 10.3.9a.9 MBMS Session identity

Includes information about the the identity of a session of an MBMS service.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Session ID	MP		Octet string (1)		REL-6

### 10.3.9a.10 MBMS Short transmission identity

Includes a short identity of the MBMS transmission identity, which concerns a session of a specific service.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS short transmission identity	MP		Integer (1..maxMBMSservUnmodif)	Reference/ index to a transmission listed in the MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION	REL-6

### 10.3.9a.10a MBMS Soft Combining Timing Offset

Indicates the timing offset applied in the CFN calculation in sub-clause 8.5.15.5 for a secondary CCPCH carrying only MBMS logical channels. It is used for FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>MBMS Soft Combining Timing Offset	MP		Integer (0, 10, 20, 40)	Timing offset applied in the CFN calculation in sub-clause 8.5.15.5, in ms.	REL-6

### 10.3.9a.11 MBMS specific timers and counters

Includes MBMS specific timers and counters.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
T318	MD		Integer(25 0... 2000 by step of 250, 3000, 4000, 6000, 8000, 10000, 12000, 16000)	Value in milliseconds. Default value is 1000.	REL-6

### 10.3.9a.12 MBMS Transmission identity

Includes information about the MBMS transmission identity, which concerns a session of a specific service.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS Service ID	MP		MBMS Service identity 10.3.9a.8		REL-6
MBMS Session ID	OP		MBMS Session identity 10.3.9a.9		REL-6

### 10.3.9a.12a MBSFN frequency list

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBSFN frequency list	MP	0 to <maxMBSFNclusters>			REL-7
>MBSFN frequency	MP		Frequency info 10.3.6.36		REL-7
>IMB indication	OP		Enumerated (TRUE)	If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency.	REL-8
>Cell parameter ID	OP	<0..127>	Cell parameter Id 10.3.6.9	Only for 1.28 Mcps TDD [32]. NOTE 1	REL-7

NOTE 1: For 1.28 Mcps TDD the IE "Cell Parameter ID" indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if it is not included, the IE "MBSFN frequency" indicates the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

## 10.3.9a.12b MBSFN TDM Information List

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBSFN TDM Information List	MP	1 to <maxM BMSservUnmodified>			REL-7
>MBMS short transmission ID	MP		MBMS Short transmission identity 10.3.9a.10		REL-7
>TDM_Rep	MP		Integer (2..9)		REL-7
>TDM_Offset	MP		Integer (0..8)		REL-7
>TDM_Length	MP		Integer (1..8)		REL-7

## 10.3.9a.13 MCCH configuration information

Includes information about the MCCH configuration.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
Access Info Period coefficient	MP		Integer (0..3)	Represents $a$ , the access information coefficient. The number of repetitions per modification period equals $2^a$ while the actual access information period, in number of frames, equals $MP \text{ DIV } 2^a$	REL-6
Repetition Period coefficient	MP		Integer (0..3)	Represents $r$ , the repetition period coefficient. The number of repetitions per modification period equals $2^r$ while the actual repetition period, in number of frames, equals $MP \text{ DIV } 2^r$	REL-6
Modification period coefficient	MP		Integer (7..10)	Represents $m$ , the modification period coefficient. The actual modification period (MP), in number of frames, equals $2^m$	REL-6
RLC info	MP		RLC info MBMS 10.3.4.23a		REL-6
TCTF presence	CV-MBMS		Enumerated (FALSE)	By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent	REL-6

Condition	Explanation
MBMS	This IE is not needed if the IE is contained within the IE 'Secondary CCPCH system information', otherwise the IE is optional.

### 10.3.9a.14 MICH configuration information

Includes information about the MICH configuration.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MICH Power offset	MP		MICH Power offset 10.3.9a.15		REL-6
CHOICE mode	MP				REL-6
>FDD					REL-6
>>Channelisation code	MP		Integer (0..255)		REL-6
>>Number of NI per frame	MP		Integer (18, 36, 72, 144)		REL-6
>>STTD indicator	MP		STTD Indicator 10.3.6.78	If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE behaviour upon reception of this IE is unspecified.	REL-6
>TDD					REL-6
>>Timeslot number	MP		Timeslot number 10.3.6.84		REL-6
>>Midamble shift and burst type	MP		Midamble shift and burst type 10.3.6.41	For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the UE shall ignore the contents of this IE.	REL-6
>>CHOICE TDD option	MP				REL-6
>>>3.84 Mcps TDD					REL-6
>>>>Channelisation code	MP		Enumerated (16/1)...(16/16)		REL-6
>>>>7.68 Mcps TDD					REL-7
>>>>>Channelisation code	MP		Enumerated (32/1)...(32/32)		REL-7
>>>>>1.28 Mcps TDD					REL-6
>>>>>>Codes list	MP	1 to 2			REL-6
>>>>>>>Channelisation code	MP		Enumerated (16/1)...(16/16)		REL-6
>>>>>>> MBSFN Special Time Slot	OP		Time Slot LCR Extension 10.3.6.83a	For 1.28 Mcps TDD MBSFN only mode, this IE indicates the SCCPCH is deployed on the MBSFN Special Time Slot [30]. The IE "Timeslot number" shall be ignored if this IE appears.	REL-7
>>>>>>>>Repetition period/length	MD		Enumerated (4/2),(8/2)	Default value is '(64/2)'. Default value is '(64/2)'.	REL-6

			), (8/4),(16/2), (16/4), (32/2),(32/4), (64/2),(64/4))		
>>Offset	MP		Integer (0..Repetition period - 1)	SFN mod Repetitionperiod = Offset.	REL-6
>>MBMS Notification indicator length	MD		Integer (4, 8, 16)	Indicates the length of one MBMS Notification indicator in bits. Default value is 4.	REL-6
>3.84 Mcps TDD MBSFN IMB					REL-8
>>Channelisation code	MP		Integer (0..255)	SF = 256; only the channelisation codes 2 to 15 are applicable	REL-8
>>Number of NI per frame	MP		Integer (16, 32, 64, 128)		REL-8

### 10.3.9a.15 MICH Power offset

This is the power transmitted on the MICH minus power of the Primary CPICH in FDD and Primary CCPCH Tx Power in TDD.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MICH Power offset	MP		Integer(-10 .. +5)	Offset in dB	REL-6

### 10.3.9a.16 MSCH configuration information

Includes information about the MSCH configuration.

Information element/Group name	Need	Multi	Type and reference	Semantics description	Version
MSCH Scheduling information	MP			For FDD, scheduling information is provided starting at (SFN – (SCTO div 10ms)) mod MSCH_REP = MSCH_OFF For TDD, scheduling information is provided starting at SFN mod MSCH_REP = MSCH_OFF	REL-6
>Scheduling period	MD		Enumerated (32, 64, 128, 256, 512, 1024)	The period, in number of frames, between MBMS scheduling messages (MSCH_REP) Default value is the value included in the MBMS GENERAL INFORMATION message	REL-6
>Scheduling offset	MD		Integer (0..(MSCH_REP-1))	The position of MBMS scheduling messages relative to timing of the corresponding cell (MSCH_OFF) Default value is the value included in the MBMS GENERAL INFORMATION message	REL-6
>RLC info	MD		RLC info MBMS 10.3.4.23a	Default value is the one included in the MBMS GENERAL INFORMATION message	REL-6
TCTF presence	OP		Enumerated (FALSE)	By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent	REL-6

### 10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Network Standard Time	MP		BIT STRING (40)	Network Standard Time	REL-8
Correlative SFN	OP		Integer (0..4095)	System frame number which is correlative with Network Standard Time Information. If it is absent, Correlative SFN is equal to zero.	REL-8

### 10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

Constant	Explanation	Value	Version
<b>CN information</b>			
maxCNdomains	Maximum number of CN domains	4	
<b>UTRAN mobility information</b>			
maxRAT	Maximum number of Radio Access Technologies	maxOtherRAT + 1	
maxOtherRAT	Maximum number of other Radio Access Technologies	15	
maxURA	Maximum number of URAs in a cell	8	
maxInterSysMessages	Maximum number of Inter System Messages	4	
maxRABsetup	Maximum number of RABs to be established	16	
maxDedicatedCSGfreq	Maximum number of dedicated CSG frequencies	4	REL-8
<b>UE information</b>			
maxtransactions	Maximum number of parallel RRC transactions in downlink	25	
maxPDCPalgoType	Maximum number of PDCP algorithm types	8	
maxFreqBandsFDD	Maximum number of frequency bands supported by the UE as defined in [21]	8	
maxFreqBandsFDD-ext	Maximum number of frequency bands as defined in [21] and treated by RRC	22	REL-6
maxFreqBandsTDD	Maximum number of frequency bands supported by the UE as defined in [22]	4	
maxFreqBandsTDD-ext	Maximum number of frequency bands supported by the UE as defined in [22]	16	REL-8
maxFreqBandsGSM	Maximum number of frequency bands supported by the UE as defined in [45]	16	
maxFreqBandsEUTRA	Maximum number of frequency bands supported by the UE as defined in [36.101]	16	REL-8
maxPage1	Number of UEs paged in the Paging Type 1 message	8	
maxSystemCapability	Maximum number of system specific capabilities that can be requested in one message.	16	
MaxURNTIgroup	Maximum number of U-RNTI groups in one message	8	REL-5
maxCommonHRNTI	Maximum number of common H-RNTI per cell	4	REL-7
maxERNTIgroup	Maximum number of common E-RNTI group per cell (1.28 Mcps TDD)	32	REL-8
maxERNTIperGroup	Maximum number of common E-RNTI in a group (1.28 Mcps TDD)	2	REL-8
<b>RB information</b>			
maxPredefConfig	Maximum number of predefined configurations	16	
maxRB	Maximum number of RBs	32	
maxSRBsetup	Maximum number of signalling RBs to be established	8	
maxRBperRAB	Maximum number of RBs per RAB	8	

Constant	Explanation	Value	Version
maxRBallIRABs	Maximum number of non signalling RBs	27	
maxRBperTrCh	Maximum number of RB per TrCh	16	REL-6
maxRBMuxOptions	Maximum number of RB multiplexing options	8	
maxLoCHperRLC	Maximum number of logical channels per RLC entity	2	
maxRLCPDUsizePerLogChan	Maximum number of RLC PDU sizes per logical channel mapped on E-DCH	32	REL-6
MaxROHC-PacketSizes	Maximum number of packet sizes that are allowed to be produced by ROHC.	16	
MaxROHC-Profiles	Maximum number of profiles supported by ROHC on a given RB.	8	
maxRFC 3095-CID	Maximum number of available CID values per radio bearer	16384	REL-5
<b>TrCH information</b>			
maxCommonQueueID	Maximum number of common Mac-ehs queues	2	REL-7
maxE-DCHMACdFlow	Maximum number of E-DCH MAC-d flows	8	REL-6
MaxHProcesses	Maximum number of H-ARQ processes	8	REL-5
MaxHSDSCH_TB_index	Maximum number of TB set size configurations for the HS-DSCH.	64 (FDD and 1.28 Mcps TDD); 512 (3.84 Mcps TDD); 1024 (7.68 Mcps TDD)	REL-5
maxMACdPDUSizes	Maximum number of MAC-d PDU sizes per queue permitted for MAC-hs	8	REL-5
maxTrCH	Maximum number of transport channels used in one direction (UL or DL)	32	
maxTrCHpreconf	Maximum number of preconfigured Transport channels, per direction	16	
maxCCTrCH	Maximum number of CCTrCHs	8	
maxQueueID	Maximum number of Mac-hs queues	8	REL-5
MaxTF	Maximum number of different transport formats that can be included in the Transport format set for one transport channel	32	
maxTFC	Maximum number of Transport Format Combinations	1024	
maxTFCsub	Maximum number of Transport Format Combinations Subset	1024	
maxSIBperMsg	Maximum number of complete system information blocks per SYSTEM INFORMATION message	16	
maxSIB	Maximum number of references to other system information blocks.	32	
maxSIB-FACH	Maximum number of references to system information blocks on the FACH	8	
<b>PhyCH information</b>			
maxHSSCCHs	Maximum number of HSSCCH codes that can be assigned to a UE	4	REL-5
maxHS-SCCHLessTrBlk	Maximum number of HS-DSCH Transport Block Sizes used for HS-SCCH-less operation	[4]	REL-7
maxTDD128Carrier	The maximum number of carriers for 1.28 Mcps TDD	6	REL-7
maxAC	Maximum number of access classes	16	
maxASC	Maximum number of access service classes	8	
maxASCmap	Maximum number of access class to access service classes mappings	7	
maxASCpersist	Maximum number of access service classes for which persistence scaling factors are specified	6	
maxPRACH	Maximum number of PRACHs in a cell	16	
maxEDCHs	Maximum number of common E-DCH resources in a cell	32	REL-8
MaxPRACH_FPACH	Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD)	8	REL-4
maxFACHPCH	Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs	8	
maxRL	Maximum number of radio links	8	

Constant	Explanation	Value	Version
maxEDCHRL	Maximum number of E-DCH radio links	4	REL-6
maxSCCPCH	Maximum number of secondary CCPCHs per cell	16	
maxDPDCH-UL	Maximum number of DPDCHs per cell	6	
maxDPCH-DLchan	Maximum number of channelisation codes used for DL DPCH	8	
maxPUSCH	Maximum number of PUSCHs	(8)	
maxPDSCH	Maximum number of PDSCHs	8	
maxTS	Maximum number of timeslots used in one direction (UL or DL)	14 (3.84 Mcps TDD and 7.68 Mcps TDD)	
		6 (1.28 Mcps TDD)	REL-4
hiPUSCHidentities	Maximum number of PUSCH Identities	64	
hiPDSCHidentities	Maximum number of PDSCH Identities	64	
maxNumE-AGCH	Maximum number of E-AGCHs (TDD)	4	REL-7
maxNumE-HICH	Maximum number of E-HICHs (1.28 Mcps TDD)	4	REL-7
maxERUCCH	Maximum number of E-RUCCH on primary frequency (1.28Mcps TDD)	256	REL-8
<b>Measurement information</b>			
maxTGPS	Maximum number of transmission gap pattern sequences	6	
maxAdditionalMeas	Maximum number of additional measurements for a given measurement identity	4	
maxMeasEvent	Maximum number of events that can be listed in measurement reporting criteria	8	
maxMeasParEvent	Maximum number of measurement parameters (e.g. thresholds) per event	2	
maxMeasIntervals	Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value	1	
maxCellMeas	Maximum number of cells to measure	32	
maxReportedGSMCells	Maximum number of GSM cells to be reported	8	
maxReportedEUTRAFreqs	Maximum number of E-UTRA frequencies to report	4	REL-8
maxReportedEUTRACellperFreq	Maximum number of E-UTRA cells to report per frequency	4	REL-8
maxFreq	Maximum number of frequencies to measure	8	
maxNumPrio	Maximum number of priorities to store	11	REL-8
maxPrio	Maximum number of RAT or Frequency Priority levels	8	REL-8
maxEUTRACellPerFreq	Maximum number of E-UTRA cells per frequency	16	REL-8
maxSat	Maximum number of satellites to measure	16	
maxGANSSSat	Maximum number of GANSS satellites to measure	64	REL-7
maxGANSS	Maximum number of GANSS supported	8	REL-7
maxSgnType	Maximum number of additional signals in GANSS to measure	8	REL-7
maxSatClockModels	Maximum number of clock models in a GANSS	4	REL-7
maxSatAlmanacStorage	Maximum number of satellites for which to store GPS Almanac information	32	
HiRM	Maximum number that could be set as rate matching attribute for a transport channel	256	
<b>Frequency information</b>			
MaxFDDFreqList	Maximum number of FDD carrier frequencies to be stored in USIM	4	
MaxTDDFreqList	Maximum number of TDD carrier frequencies to be stored in USIM	4	
MaxFDDFreqCellList	Maximum number of neighbouring FDD cells to be stored in USIM	32	
MaxTDDFreqCellList	Maximum number of neighbouring TDD cells to be stored in USIM	32	
MaxGSMCellList	Maximum number of GSM cells to be stored in USIM	32	

Constant	Explanation	Value	Version
<b>Other information</b>			
MaxGERANSI	Maximum number of GERAN SI blocks that can be provided as part of NACC information	8	REL-5
maxNumGSMFreqRanges	Maximum number of GSM Frequency Ranges to store	32	
MaxNumFDDFreqs	Maximum number of FDD centre frequencies to store	8	
MaxNumTDDFreqs	Maximum number of TDD centre frequencies to store	8	
maxNumCDMA200Freqs	Maximum number of CDMA2000 centre frequencies to store	8	
maxGSMTargetCells	Maximum number of GSM target cells	32	REL-6
maxNumGSMCellGroup	Maximum number of GSM frequency groups to store	16	REL-8
maxNumEUTRAFreqs	Maximum number of EUTRA centre frequencies to store	8	REL-8
maxEUTRATargetFreqs	Maximum number of target E-UTRA frequencies	8	REL-8
maxHNBNameSize	Maximum number of octets for the HNB Name	48	REL-8
<b>MBMS information</b>			
maxMBMS-CommonCCTrCh	Maximum number of CCTrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message	32	REL-6
maxMBMS-CommonPhyCh	Maximum number of PhyCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message	32	REL-6
maxMBMS-CommonRB	Maximum number of RB configurations included in the MBMS COMMON P-T-M RB INFORMATION message	32	REL-6
maxMBMS-CommonTrCh	Maximum number of TrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message	32	REL-6
maxMBMS-Freq	Maximum number of MBMS preferred frequencies	4	REL-6
maxMBMS-L1CP	Maximum number of periods in which layer 1 combining applies	4	REL-6
maxMBMSServCount	Maximum number of MBMS services in a Access Info message	8	REL-6
maxMBMSServModif	Maximum number of MBMS services in a MBMS MODIFIED SERVICES INFORMATION message	32	REL-6
maxMBMSServSched	Maximum number of MBMS services in a MBMS SCHEDULING INFORMATION message	16	REL-6
maxMBMSServSelect	Maximum number of MBMS Selected Services in a CELL UPDATE or RRC CONNECTION REQUEST message	8	REL-6
maxMBMSServUnmodif	Maximum number of MBMS services in a MBMS UNMODIFIED SERVICES INFORMATION message	64	REL-6
maxMBMSTransmis	Maximum number of transmissions for which scheduling information is provided within a scheduling period	4	REL-6
maxMBMS-Services	Maximum number of MBMS services the UE stores in the variable MBMS_ACTIVATED_SERVICES	64	REL-6
maxMBSFNclusters	Maximum number of MBSFN clusters indicated in system information	16	REL-7

## 11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

## 11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

NOTE: An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.

}
END

```

## 12 Message transfer syntax

Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in X.691 [49], and with adapted final padding. If special encoding is used, it is indicated in the ECN module defined for each ASN.1 module. The use of special encoding is defined in [14].

The following encoding rules apply in addition to what has been specified in X.691 [49]:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

### 12.1 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/ across the radio interface, is the concatenation of a basic production, an extension and padding, in that order.

RRC PDUs shall be mapped to and from RLC SDUs upon transmission and reception as follows:

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and
- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

#### 12.1.1 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691, except for the 0 to 7 bits added at the end to produce a multiple of 8 bits. The basic production can have any positive number of bits, not necessarily a multiple of 8 bits.

#### 12.1.2 Extension

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, set the extension part empty. Emitters compliant with a later version might send non-empty extensions.

#### 12.1.3 Padding

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, pad the basic production with the smallest number of bits required to meet the size constraints of the lower layers. Padding bits shall be set to 0.

Receivers compliant with this version of the specification have no need to distinguish the extension and padding parts, and shall, unless indicated otherwise on a PDU type basis, accept RRC PDUs with any bit string in the extension and padding parts.

**Figure 12.1.3-1: Padding**

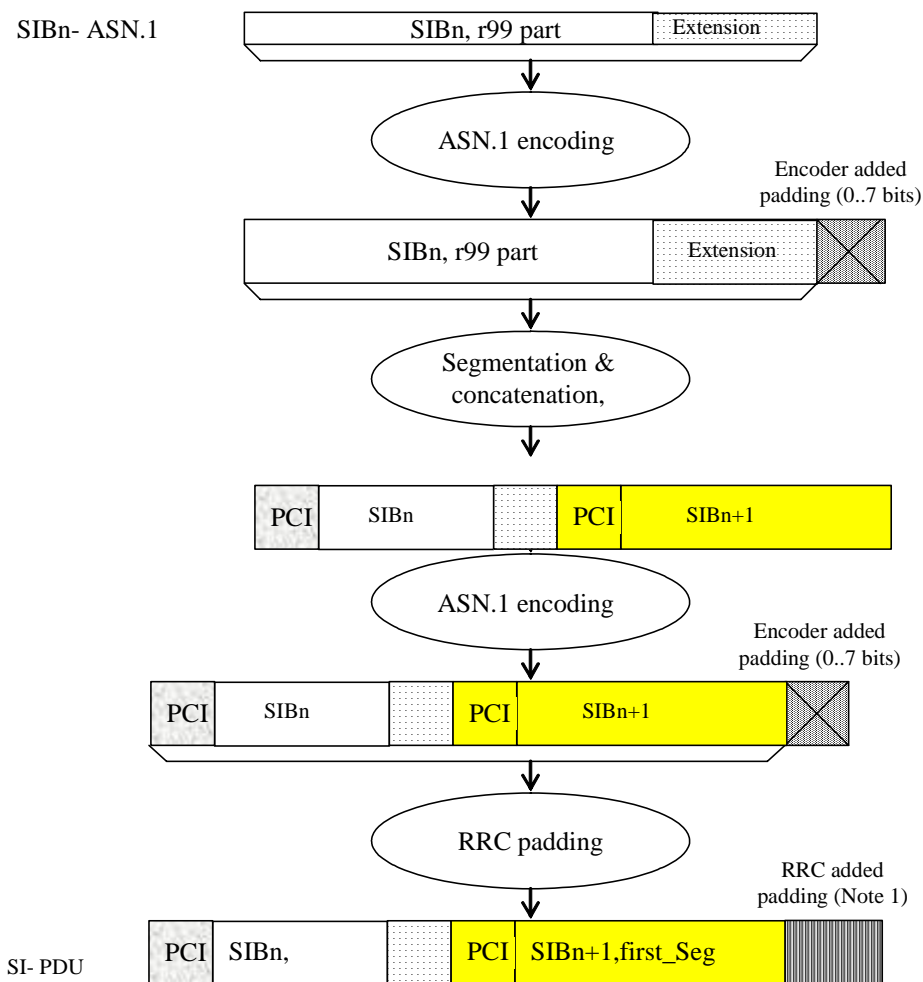

When using AM or UM mode, RLC requires that the RRC PDU length is a multiple of 8 bits.

When using Tr mode, RLC does neither impose size requirements nor perform padding. This implies that RRC has to take into account the transport format set defined for the transport channel across which the message is to be sent. RRC shall add the lowest number of padding bits required to fit the size specified for the selected transport format.

For paging type 1 messages, in case the PCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For SYSTEM INFORMATION CHANGE INDICATION message, in case the BCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For system information blocks, building the PDU involves two steps. The first step is the building of the System Information Blocks, in which step padding is not applied (the rules for extension apply). The second step is the building of the RRC PDUs, involving segmentation and concatenation of System Information Blocks, and then padding as described above for Tr mode if the BCCH carrying the System Information Blocks is mapped on BCH. The procedure is shown by means of an example as described in Figure 12.1.3-2. The example includes two System Information Blocks, SIB<sub>n</sub> and SIB<sub>n+1</sub>, of which only SIB<sub>n</sub> includes a protocol extension. The two System Information Blocks used in the example do not require segmentation and are concatenated into one SYSTEM INFORMATION message.

Note 1: RRC padding needs to be added only to octet align BCCH blocks which are mapped onto HS-DSCH

Figure 12.1.3-2: Padding for System Information

PCI: Protocol control information at SYSTEM INFORMATION message level

SI: SYSTEM INFORMATION message

For system information blocks, RRC may also add padding information at the end of IE "SIB data fixed", used both within IE "Last segment" and IE "Complete SIB". The IE "SIB data fixed" has a fixed length i.e. no length denominator used. In case the remaining amount of "SIB data" information is insufficient to fill the IE completely, RRC includes padding bits.

Since no length denominator is included, the receiving RRC cannot remove the padding added by the sender. However, since the padding used is the same as the padding added by the PER encoder to achieve octet alignment, the receiver can handle it.

NOTE 1 The mechanism described above implies that the PDU provided to the ASN.1 decoder may have more than 7 padding bits included. For a complete System Information Block of length 215 bits, 11 padding bits are added by RRC. Since the decoder requires an octet aligned input, 6 additional bits need to be added. In this (worst) case, a total of 17 padding bits is included.

NOTE 2 For the above cases, use of padding bits is possible and more efficient than including a length denominator.

When using the RRC padding described above, the segment has a fixed length, which completely fills the transport block. Therefore, in this case no RRC padding is added within the SYSTEM INFORMATION message. This is illustrated by means of the following figure.

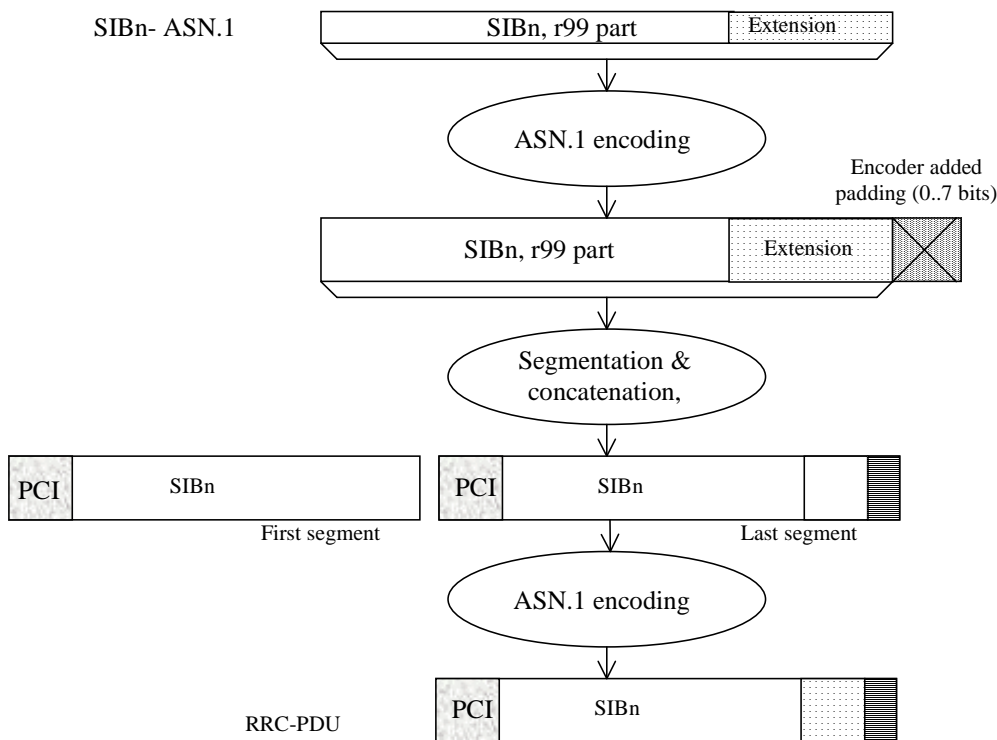

Figure 12.1.3-3: No RRC padding for System Information

## 12.2 ECN link module for RRC

```

RRC-ECN-Link-Module LINK-DEFINITIONS ::=
BEGIN

IMPORTS
    RRC-encodings          -- Encoding objects for RRC messages
FROM RRC-Encoding-Definitions;

ENCODE Class-definitions
    WITH RRC-encodings
    COMPLETED BY PER-BASIC-UNALIGNED

ENCODE PDU-definitions
    WITH RRC-encodings
    COMPLETED BY PER-BASIC-UNALIGNED

ENCODE InformationElements
    WITH RRC-encodings
    COMPLETED BY PER-BASIC-UNALIGNED

ENCODE Internode-definitions
    WITH RRC-encodings
    COMPLETED BY PER-BASIC-UNALIGNED

END
    
```

## 12.3 ECN modules for RRC

The encoding definition module "RRC-Encoding-Definitions" contains definition of the encoding object set "RRC-encodings". The encoding object set contains all the specialized encoding for RRC.

```

RRC-Encoding-Definitions ENCODING-DEFINITIONS ::=
    
```

```

BEGIN
EXPORTS
    RRC-encodings;

RRC-encodings #ENCODINGS ::= {
    -- Trailing bits
    outer-encoding
}

--*****
--
-- The trailing bits in all RRC messages shall be ignored
-- (including unknown message contents & unknown extensions).
-- This overrides the default PER behaviour which pads the last
-- octet with zero bits.
--
--*****

outer-encoding #OUTER ::= {
    ENCODER-DECODER {
    }
    DECODE AS IF {
        POST-PADDING    encoder-option
    }
}

END

Class-definitions-ECN-Module ENCODING-DEFINITIONS ::=

END

```

## 12.4 RRC messages encoded otherwise

NOTE: The messages included in this section are not specified by means of ASN.1.

### 12.4.1 Messages using tabular encoding specification

The encoding of the message is specified by means of a table listing the information elements known in the message and their order of their appearance in the message.

When a field extends over more than one octet, the order of bit values progressively decreases as the octet number increases. The least significant bit of the field is represented by the lowest numbered bit of the highest numbered octet of the field.

#### 12.4.1.1 TRANSPORT FORMAT COMBINATION CONTROL using transparent DCCH

##### 12.4.1.1.1 TRANSPORT FORMAT COMBINATION CONTROL, 3 bit format

The 3 bit format is as follows:

<b>3</b>	<b>2</b>	<b>1</b>	Transport Format Combination Set Identity value
0	0	0	0
0	0	1	1
0	1	0	2
1	1	1	7

12.4.1.1.2      Void

12.4.1.1.3      Void

## 13 Protocol timers, counters, other parameters and default configurations

The information provided in subclauses 13.1 and 13.2 shall be treated as informative. The normative text is specified in the relevant subclauses in clause 8 and clause 8 shall prevail.

### 13.1 Timers for UE

Timer	Start	Stop	At expiry
T300	Transmission of RRC CONNECTION REQUEST in case of connection establishment for reasons other than MBMS reception	Reception of RRC CONNECTION SETUP	Retransmit RRC CONNECTION REQUEST if V300 =< N300, else go to Idle mode
T302	Transmission of CELL UPDATE/URA UPDATE	Reception of CELL UPDATE CONFIRM/URA UPDATE CONFIRM	Retransmit CELL UPDATE/URA UPDATE if V302 =< N302, else, go to Idle mode
T304	Transmission of UE CAPABILITY INFORMATION	Reception of UE CAPABILITY INFORMATION CONFIRM	Retransmit UE CAPABILITY INFORMATION if V304 =< N304, else initiate a cell update procedure
T305	Entering CELL_FACH or URA_PCH or CELL_PCH state. Reception of CELL UPDATE CONFIRM/URA UPDATE CONFIRM.	Entering another state.	Transmit CELL UPDATE if T307 is not activated and the UE detects "in service area". Otherwise, if T307 is not active, start T307.
T307	When the timer T305 has expired and the UE detects "out of service area".	When the UE detects "in service area".	Transit to idle mode
T308	Transmission of RRC CONNECTION RELEASE COMPLETE	Not stopped	Transmit RRC CONNECTION RELEASE COMPLETE if V308 <=N308, else go to idle mode.
T309	Upon reception of CELL CHANGE ORDER FROM UTRAN message	Successful response to a connection establishment request in the new cell.	Resume the connection to UTRAN
T310	Transmission of PUSCH CAPACITY REQUEST	Reception of PHYSICAL SHARED CHANNEL ALLOCATION	Transmit PUSCH CAPACITY REQUEST if V310 =< N310, else procedure stops.
T311	Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with the CHOICE "PUSCH allocation" set to "PUSCH allocation pending".	Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with CHOICE "PUSCH allocation" set to "PUSCH allocation assignment".	UE may initiate a PUSCH capacity request procedure.
T312	When the UE starts to establish dedicated CH. For 1.28 Mcps TDD, it can also apply for physical shared channel establishment.	When the UE detects N312 "in sync" indication from L1.	The criteria for physical channel establishment failure is fulfilled
T313	When the UE detects consecutive N313 "out of sync" indication from L1.	When the UE detects consecutive N315 "in sync" indication from L1.	The criteria for Radio Link failure is fulfilled.

Timer	Start	Stop	At expiry
T314	When the criteria for radio link failure are fulfilled. The timer is started if radio bearer(s) that are associated with T314 exist or if only RRC connection exists only to the CS domain.	When the Cell Update procedure has been completed.	See subclause 8.3.1.13.
T315	When the criteria for radio link failure are fulfilled. The timer is started only if radio bearer(s) that are associated with T315 exist or if RRC connection exists to PS domain.	When the Cell Update procedure has been completed.	See subclause 8.3.1.14.
T316	When the UE detects "out of service area" in URA_PCH or CELL_PCH state	When the UE detects "in service area".	Initiate cell update procedure if in service area is detected. Otherwise start timer T317, transit to CELL_FACH state and initiate cell update procedure when the UE detects "in service area".
T317	When the T316 expires or when in CELL_FACH state, the UE detects "out of service area".	When the UE detects "in service area".	T317 never expires.
T318	Transmission of RRC CONNECTION REQUEST in case of connection establishment for MBMS reception	Reception of RRC CONNECTION SETUP	Enter idle mode
T319	When entering CELL_PCH or URA_PCH.	When leaving CELL_PCH or URA_PCH state.	The UE activates starts the DRX cycle based on 'DRX cycle length coefficient'.
T320	When receiving the CELL UPDATE CONFIRM message with IE 'Wait time' and IE 'RRC State Indicator' set to the value 'CELL_PCH' or 'URA_PCH'.	When initiating the cell update or URA update procedure, see subclause 8.3.1.2.	See subclause 8.3.1.16.
T321	See subclause 8.5.49.	See subclause 8.5.49.	See subclause 8.5.49.
T322	When received in UTRAN MOBILITY INFORMATION message in the IE 'Dedicated Priority Information' or upon cell (re)selection to UTRA from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied).	When dedicated priorities are cleared, when new dedicated priorities are received, when PLMN selection is performed on request by NAS, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT).	See subclause 8.3.3.7
T323	When transmitting a SIGNALLING CONNECTION RELEASE INDICATION message including the IE "Signalling Connection Release Indication Cause"	See subclauses 8.2.2.3 and 8.3.1.6. In this version of specification, UE may or may not stop the timer upon release of RRC connection.	See subclause 8.1.14.4

Timer	Start	Stop	At expiry
T324	When a measurement report is triggered by intra frequency event 1d and the table 'Target cell preconfigurations' in the variable TARGET_CELL_PRECONFIGURATION includes the cell that triggered the event and an Activation time offset equal to 0 is configured	Upon successful reception of a Target cell HS-SCCH order or after 4 seconds or upon reception of any RRC reconfiguration message or ACTIVE SET UPDATE message	Stop monitoring target cell HS-SCCH
T325	When new ETWS information is received on PCCH or BCCH in case RRC is configured to receive ETWS primary notification with security	When the corresponding ETWS security information is received	The ETWS primary notification with security procedure is completed unsuccessfully

## 13.2 Counters for UE

Counter	Reset	Incremented	When reaching max value
V300	When initiating the procedure RRC connection establishment	Upon expiry of T300.	When V300 > N300, the UE enters idle mode.
V302	When initiating the procedure Cell update or URA update	Upon expiry of T302	When V302 > N302 the UE enters idle mode.
V304	When sending the first UE CAPABILITY INFORMATION message.	Upon expiry of T304	When V304 > N304 the UE initiates the Cell update procedure
V308	When sending the first RRC CONNECTION RELEASE COMPLETE message in a RRC connection release procedure.	Upon expiry of T308	When V308 > N308 the UE stops re-transmitting the RRC CONNECTION RELEASE COMPLETE message.
V310	When sending the first PUSCH CAPACITY REQUEST message in a PUSCH capacity request procedure	Upon expiry of T310	When V310 > N310 the UE stops re-transmitting the PUSCH CAPACITY REQUEST message.
V316	At transmission or reception of PS data or signalling on SRB3 or upwards, or entering RRC Connected mode, or successful SRNS relocation.	Upon sending the SIGNALLING CONNECTION RELEASE INDICATION message, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state and the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain and V316 < 1.	When V316 >= 1 the UE stops sending any further SIGNALLING CONNECTION RELEASE INDICATION messages, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state for as long as the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain.

## 13.3 UE constants and parameters

Constant	Usage
N300	Maximum number of retransmissions of the RRC CONNECTION REQUEST message
N302	Maximum number of retransmissions of the CELL UPDATE / URA UPDATE message
N304	Maximum number of retransmissions of the UE CAPABILITY INFORMATION message
N308	Maximum number of retransmissions of the RRC CONNECTION RELEASE COMPLETE message
N310	Maximum number of retransmission of the PUSCH CAPACITY REQUEST message
N312	Maximum number of "in sync" received from L1.
N313	Maximum number of successive "out of sync" received from L1.
N315	Maximum number of successive "in sync" received from L1 during T313 is activated.

## 13.4 UE variables

### 13.4.ob AM\_RLC\_ERROR\_PENDING\_RB234

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 2, 3, or 4.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
AM RLC error pending	MP		Boolean	TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure.. Set to FALSE when the cell update procedure is completed.

### 13.4.oc AM\_RLC\_ERROR\_PENDING\_RB5\_AND\_UP

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 5 or above.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
AM RLC error pending	MP		Boolean	TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure.. Set to FALSE when the cell update procedure is completed.

### 13.4.0 CELL\_INFO\_LIST

This variable contains cell information on intra-frequency, inter-frequency and inter-RAT cells, as received in messages System Information Block Type 11, System Information Block Type 12, and MEASUREMENT CONTROL.

The first position in Intra-frequency cell info list corresponds to Intra-frequency cell id 0, the second to Intra-frequency cell id 1, etc.

The first position in Inter-frequency cell info list corresponds to Inter-frequency cell id 0, the second to Inter-frequency cell id 1, etc.

The first position in Inter-RAT cell info list corresponds to Inter-RAT cell id 0, the second to Inter-RAT cell id 1, etc.

This variable shall be cleared at cell re-selection, when leaving UTRA RRC connected mode, when switched off as well as at selection of a new PLMN.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Intra-frequency cell info	OP	1..<maxCel IMeas>			
>CHOICE <i>position status</i>	MP				
>>Occupied					
>>>Cell info	MP		Cell info 10.3.7.2		
>>Vacant				No data	
Inter-frequency cell info	OP	1..<maxCel IMeas>

>>Occupied					
>>>Frequency info	MP		Frequency info 10.3.6.36		
>>>Cell info	MP		Cell info 10.3.7.2		
>>Vacant				No data	
Adjacent frequency info	OP		Frequency info 10.3.6.36		REL-8
Inter-RAT cell info list	OP				REL-5
>Inter-RAT cell info	OP	1..<maxCel IMeas>			
>>CHOICE <i>position status</i>	MP				
>>>Occupied					
>>>>CHOICE <i>Radio Access Technology</i>					
>>>>>GSM					
>>>>>>Cell selection and re- selection info	MP		Cell selection and re- selection info for SIB11/12 10.3.2.4		
>>>>>>BSIC	MP		BSIC 10.3.8.2		
>>>>>>BCCH ARFCN	MP		Integer (0..1023)	[43]	
>>>>>>IS-2000					
>>>>>>>System specific measurement info			enumerated (frequency, timeslot, colour code, output power, PN offset)	For IS-2000, use fields from TIA/EIA/IS-2000.5, subclause 3. 7.3.3.2.27, <i>Candidate Frequency Neighbour List Message</i>	
>>>Vacant				No data	
>CHOICE <i>indication status</i>	MP				REL-5
>>Present					REL-5
>>>Inter-RAT cell info indication	OP		Integer (0..3)		REL-5
>>Not present				No data	REL-5

## 13.4.00 Void

### 13.4.0a CELL\_UPDATE\_STARTED

This variable indicates whether a cell update or URA update procedure is in progress.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cell update started	MP		Boolean	TRUE means a cell or URA update procedure is in progress. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.1 CIPHERING\_STATUS

This variable contains information about the current status of ciphering in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Status for each CN domain	MP	<1 to maxCNDomains>		
>CN domain identity	MP		CN domain identity 10.3.1.1	
>Status	MP		Enumerated(Not started, Started)	Set to "Not started" when entering UTRA RRC connected mode. Set to "Not started" when leaving UTRA RRC connected mode.
Reconfiguration	MP		Boolean	TRUE means an RRC procedure performing reconfiguration of ciphering is ongoing. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

#### 13.4.1a COMMON\_E\_DCH\_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCH and E-PUCH transmission procedure for 1.28 Mcps TDD in CELL\_FACH state or Idle mode are ongoing. See subclause 8.5.46 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Common E-DCH transmission	MP		Boolean	See subclause 8.5.46	REL-8

### 13.4.2 Void

#### 13.4.2a CONFIGURATION\_INCOMPLETE

This variable indicates whether a received measurement control message contains invalid an incomplete measurement configuration.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Configuration incomplete	MP		Boolean	TRUE: An incomplete configuration has been detected. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.3 C\_RNTI

This variable stores the assigned C-RNTI for this UE when in CELL\_FACH state. For FDD and 1.28 Mcps TDD, this variable stores the assigned C-RNTI for this UE in CELL\_PCH state, if in CELL\_PCH state a HS-DSCH transport channel has been allocated.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
C-RNTI	OP		C-RNTI 10.3.3.8	Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.

### 13.4.3a DEFERRED\_MEASUREMENT\_STATUS

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Deferred measurement status	MP		Boolean	If TRUE, the UE can transmit RRC messages on RACH and receive RRC messages commanding it to enter CELL_DCH without having read and acted on SIB11, SIB11 bis and 12.	REL-7

### 13.4.3b DTX\_DRX\_PARAMS

NOTE: For FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE parameters for DTX-DRX	MD		DTX-DRX Information in 10.3.6.34a		REL-7

### 13.4.3c DTX\_DRX\_STATUS

NOTE: For FDD only.

This variable indicates whether discontinuous UL DPCCCH transmission and discontinuous reception of F-DPCCCH and HSPA DL channel procedures are ongoing. See subclause 8.5.34 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
DTX_DRX_STATUS	MP		Boolean	TRUE: discontinuous transmission and reception is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-7

### 13.4.3d DSAC\_PARAM

This variable contains Domain Specific Access Restriction Parameters during the connected mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CS Domain Specific Access Restriction	MP		Domain Access Restriction 10.3.1.3b	This IE contains CS Domain Specific Access Restriction Parameters Cleared when leaving UTRA RRC connected mode.	REL-6
PS Domain Specific Access Restriction	MP		Domain Access Restriction 10.3.1.3b	This IE contains PS Domain Specific Access Restriction Parameters Cleared when leaving UTRA RRC connected mode.	REL-6

### 13.4.3e DSCH\_RNTI

In TDD this variable stores the assigned DSCH-RNTI for this UE when in CELL\_DCH state.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
DSCH-RNTI	OP		DSCH-RNTI 10.3.3.9a	Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.

### 13.4.4 Void

### 13.4.4o E\_DCH\_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures are ongoing. See subclause 8.5.28 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
E-DCH transmission	MP		Boolean	TRUE: E-DCH transmission is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-6

### 13.4.4a E\_RNTI

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Primary E-RNTI	OP		E-RNTI 10.3.3.10a	Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.	REL-6
Secondary E-RNTI	OP		E-RNTI 10.3.3.10a	Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.	REL-6

### 13.4.5 ESTABLISHED\_RABS

This variable is used to store information about the established radio access bearers and signalling radio bearers in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
RAB information	OP	1 to <maxRABsetup>		For each RAB established. Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.
>RAB info	MP		RAB info 10.3.4.8	
>RB information	MP	1 to <maxRBper RAB>		For each RB belonging to the RAB
>>RB identity	MP		RB identity 10.3.4.16	
>>Subflow	MP		Integer(0..<	Reference to the RAB subflow

Information Element/Group name	Need	Multi	Type and reference	Semantics description
			maxSubflow count>	implemented by this RB
>>RB started	MD		Enumerated(stopped, started)	Default value is started
Signalling radio bearer information	OP	1 to <maxSRBsetup>		In the order of RB0 and upwards. Cleared when leaving UTRA RRC connected mode.
>RB started	MD		Enumerated(stopped, started)	Default value is started

### 13.4.5a ESTABLISHED\_SIGNALLING\_CONNECTIONS

This variable is used to store information about established signalling connections.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Signalling connection list	OP	1 to <maxCNdomains>		For each established signalling connection. Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.
>Signalling connection identity	MP		CN domain identity 10.3.1.1	

### 13.4.6 ESTABLISHMENT\_CAUSE

This variable is used to store the cause for establishment of a signalling connection received by upper layers, to be used at RRC connection establishment or Initial Direct Transfer.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Establishment cause	OP		Establishment cause 10.3.3.11	Cleared when leaving UTRA RRC connected mode.

### 13.4.6a EUTRA\_FREQUENCY\_INFO\_LIST

This variable contains cell information on E-UTRA frequencies (possibly with associated blacklists), as received in messages System Information Block Type 19 and MEASUREMENT CONTROL.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Frequency Info List	MP	1 to <maxNumEUTRAFreqs>			REL-8
>EARFCN	MP		Integer(0 .. 65535)	EARFCN of the downlink carrier frequency [36.101]	REL-8
>Measurement Bandwidth	MD		Enumerated(6, 15, 25, 50, 75, 100)	Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, N <sub>RB</sub> [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6.	REL-8
>Blacklisted cells per freq list	OP	1 to <maxEUTRACellPerFreq>			REL-8
>>Physical Cell identity	MP		Integer (0..503)	A list of blacklisted cells can be signalled per frequency	REL-8

### 13.4.6b ETWS\_DUPLICATE\_DETECT\_PARAM

This variable contains duplicate detection parameter for the ETWS information until the upper layer indicates to clear the variable. The UE should remove entries in this variable when they have been stored for three hours.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Duplication detection parameters list	MP	0 to 2			REL-8
>Message Identifier	MP		Octet String (2)	IE "Message Identifier" as defined in [77]	REL-8
>Serial Number	MP		Octet string (2)	IE "Serial Number" as defined in [77]	REL-8

### 13.4.6c ETWS\_INFO\_IN\_PROGRESS

This variable contains the ETWS information during the ETWS primary notification with security procedure. The variable is cleared when the ETWS primary notification with security procedure is completed.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>state of this variable</i>	MP				REL-8
>Cleared				(no data)	REL-8
>Set					REL-8
>>ETWS information	MP		ETWS information 10.3.8.4ea		REL-8

### 13.4.7 FAILURE\_CAUSE

This variable contains the cause for failure of a UE initiated procedure, to be reported in a retransmitted message.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Failure cause	OP		Failure cause 10.3.3.13	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.8 FAILURE\_INDICATOR

This variable indicates whether the procedure has failed for a UE initiated procedure.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Failure indicator	MP		Boolean	TRUE: Procedure has failed. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.8o H\_RNTI

This variable stores the assigned H-RNTI for this UE when in CELL-DCH, CELL\_FACH (FDD and 1.28 Mcps TDD only) or CELL\_PCH (FDD and 1.28 Mcps TDD only) state, and when an HS-DSCH transport channel has been allocated.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
H-RNTI	OP		H-RNTI 10.3.3.14a	Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode.	REL-5

### 13.4.800 HS\_DSCH\_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing. See subclause 8.5.25 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception	MP		Boolean	TRUE: HS-DSCH reception is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-5

### 13.4.80a HS\_DSCH\_RECEPTION\_CELL\_FACH\_STATE

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL\_FACH for BCCH, DCCH and, if configured, DTCH reception. See subclause 8.5.36 for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception in CELL_FACH state	MP		Boolean	TRUE: HS-DSCH reception in CELL_FACH is ongoing. Set to FALSE when entering UTRA RRC connected mode, CELL_PCH, URA_PCH and CELL_DCH. Set to FALSE when leaving UTRA RRC connected mode,	REL-7

### 13.4.80b HS\_DSCH\_RECEPTION\_OF\_CCCH\_ENABLED

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are enabled for CCCH and BCCH, and for SRB1 if the UE is in CELL\_FACH state. See subclause 8.5.37 for actions related to the setting of this variable.

NOTE: For FDD and 1.28 Mcps TDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception of CCCH	MP		Boolean	TRUE: HS-DSCH reception for the CCCH is enabled. Set to FALSE when leaving UTRA RRC connected mode. Set to FALSE when entering CELL_PCH, URA_PCH and CELL_DCH.	REL-7

### 13.4.8oc HS\_DSCH\_RECEPTION\_GENERAL

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL\_DCH, CELL\_FACH, CELL\_PCH, or URA\_PCH. See subclause 8.5.37a for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception in all states	MP		Boolean	TRUE: HS-DSCH reception in CELL_DCH, CELL_FACH, CELL_PCH or URA_PCH is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode	REL-7

### 13.4.8od SECONDARY\_CELL\_HS\_DSCH\_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are configured for a secondary serving.HS-DSCH cell See subclause 8.5.51 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception	MP		Boolean	TRUE: HS-DSCH reception is configured for a secondary serving HS-DSCH cell. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-8

### 13.4.80e HS\_DSCH\_DRX\_CELL\_FACH\_STATUS

This variable indicates whether HS-DSCH DRX operation is supported in CELL\_FACH. See subclause 8.5.48 for actions related to the setting of this variable.

NOTE: FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH DRX in CELL_FACH status	MP		Boolean	TRUE: HS-DSCH DRX operation in CELL_FACH is supported. Set to FALSE when leaving CELL_FACH or when dedicated H-RNTI is cleared.	REL-8

### 13.4.80f HS\_DSCH\_RECEPTION\_OF\_ETWS\_ENABLED

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are enabled for CCCH and BCCH during the ETWS primary notification with security procedure. See subclauses 8.1.17 and 8.5.37 for actions related to this variable.

NOTE: For FDD and 1.28 Mcps TDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS-DSCH reception of ETWS on CCCH	MP		Boolean		REL-8

### 13.4.8000 HS\_SCCH\_LESS\_PARAMS

NOTE: For FDD only.

This variable contains the parameters for UE operation in HS-SCCH less mode. The parameters are listed in subclause 10.3.6.36ab.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE parameters for HS-SCCH less	MD		HS-SCCH less Information in 10.3.6.36ab		REL-7

### 13.4.80000 HS\_SCCH\_LESS\_STATUS

NOTE: For FDD only.

This variable indicates whether HS-SCCH less HS-DSCH transmission procedures are ongoing. See subclause 8.5.35 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS_SCCH_LESS_STATUS	MP		Boolean	TRUE: HS-SCCH less HS-DSCH transmission is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-7

### 13.4.8a INCOMPATIBLE\_SECURITY\_RECONFIGURATION

This variable indicates whether an incompatible simultaneous reconfiguration of a security function has been received.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Incompatible security reconfiguration	MP		Boolean	TRUE: An incompatible simultaneous security reconfiguration has been detected. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

13.4.8b Void

13.4.8c Void

### 13.4.8d HSPA\_RNTI\_STORED\_CELL\_PCH

This variable indicates whether variables H\_RNTI, C\_RNTI and E\_RNTI are stored in CELL\_PCH state.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HSPA RNTI_STORED_CELL_PCH	MP		Boolean	TRUE: variables H_RNTI, C_RNTI and E_RNTI are stored in CELL_PCH state. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-8

### 13.4.9 INITIAL\_UE\_IDENTITY

In this variable the identity used by the UE when establishing an RRC connection is stored.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Initial UE identity	OP		Initial UE identity 10.3.3.15	Cleared when leaving UTRA RRC connected mode.

### 13.4.9a INTEGRITY\_PROTECTION\_ACTIVATION\_INFO

This variable contains information to be sent to UTRAN about when a new integrity protection configuration shall be activated in the uplink for signalling radio bearers in case of modification of integrity protection.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Uplink Integrity protection activation info	OP		Integrity protection activation info 10.3.3.17	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.10 INTEGRITY\_PROTECTION\_INFO

This variable contains information about the current status of the integrity protection in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Status	MP		Enumerated( Not started, Started)	Set to "Not started" when entering UTRA RRC connected mode. Set to "Not started" when leaving UTRA RRC connected mode.
Reconfiguration	MP		Boolean	TRUE means a reconfiguration of integrity protection is ongoing. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.
Signalling radio bearer specific	OP	1 to		When integrity protection is

Information Element/Group name	Need	Multi	Type and reference	Semantics description
integrity protection information		<maxSRBs etup>		started, status information for RB0- RB4 in that order. Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>Uplink RRC HFN	MP		Bit string (28)	
>Downlink RRC HFN	MP		Bit string (28)	
>Uplink RRC Message sequence number	MP		Integer (0..15)	
>Downlink RRC Message sequence number	OP		Integer (0..15)	

### 13.4.10a INTER\_RAT\_HANDBOVER\_INFO\_TRANSFERRED

This variable stores information about the inter RAT handover info that has been transferred to another RAT.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Predefined configuration status information	OP		Predefined configuration status information 10.3.4.5a	Cleared upon entering connected mode in another RAT	
Predefined configuration status information compressed	OP		Predefined configuration status information compressed 10.3.4.5b	Cleared upon entering connected mode in another RAT	REL-5
UE security information	OP		UE security information 10.3.3.4 2b	Cleared upon entering connected mode in another RAT	
UE security information2	OP		UE security information2 10.3.3.4 2c	Cleared upon entering connected mode in another RAT	REL-6
UE radio access capability	OP		UE radio access capability 10.3.3.4 2	Cleared upon entering connected mode in another RAT	
UE radio access capability extension	OP		UE radio access capability extension 10.3.3.4 2a	Cleared upon entering connected mode in another RAT	
UE radio access capability compressed	OP		UE radio access capability compressed 10.3.3.4 2o		REL-5
UE system specific capability	OP	1 to <maxSystemCapability>	Inter-RAT UE radio access capability 10.3.8.7	Cleared upon entering connected mode in another RAT	
>Inter-RAT UE radio access capability	MP		Inter-RAT UE radio		

			access capability 10.3.8.7		
--	--	--	-------------------------------	--	--

### 13.4.11 INVALID\_CONFIGURATION

This variable indicates whether a received message contained an invalid configuration, by means of invalid values or invalid combinations of information elements.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Invalid configuration	MP		Boolean	TRUE: An invalid configuration has been detected. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.11a LATEST\_CONFIGURED\_CN\_DOMAIN

This variable stores the CN-domain that was most recently configured to be used for ciphering and integrity protection.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Latest configured CN domain	OP		CN domain identity 10.3.1.1	Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. Cleared when leaving UTRA RRC connected mode.

### 13.4.11b LATEST\_CONFIGURED\_SRB\_DELAY\_AND\_PC\_PREAMBLE

This variable stores the SRB delay and PC preamble to be used for establishing the DPCH after failure of hard handover, inter-RAT handover from UTRAN, or cell change order from UTRAN.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
SRB delay	OP		Integer (0..7)	Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.
PC preamble	OP		Integer (0..7)	Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.

### 13.4.11c MBMS\_ACTIVATED\_services

This variable stores the MBMS multicast services the UE has joined as well as the MBMS broadcast services the UE is interested to receive. Whenever the list of joined multicast services and/ or interested broadcast services changes, upper layers provide an indication upon which the UE shall update the variable accordingly. In case upper layers de-select an MBMS Selected Services, the UE shall remove the concerned service from the variable. Likewise, when upper layers select an MBMS Selected Services, the UE shall add the concerned service to the variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Activated service list	OP	1 to <maxMBMS-Service>		
>Service Identity	MP		MBMS Service identity 10.3.9a.8	
>Service type	MP		Enumerated (Multicast, Broadcast)	
>MBMS Selected Services Indicator	CV- <i>Broadcast</i>		Boolean	TRUE means that the service is currently a MBMS Selected Service

Condition	Explanation
<i>Broadcast</i>	This IE is mandatory present if the IE "Service type" is set to "Broadcast" and not needed otherwise.

NOTE: An independent instance of the variable MBMS\_ACTIVATED\_SERVICES is used by UEs supporting reception of MBMS services from cells operating in MBSFN mode and will contain the services available in MBSFN mode only as indicated by higher layers.

### 13.4.11d MBMS\_PREV\_FREQUENCY\_INFO

This variable stores the frequency information of the cell the UE is camped on, upon moving to the MBMS preferred layer indicated MBMS FLC preferred frequency information.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
PREV Frequency Information					
CHOICE <i>mode</i>					
>FDD cell					
>>UARFCN downlink (Nd)	MP		Integer(0 .. 16383)	[21]	
>3.84 Mcps TDD cell					
>>UARFCN (Nt)	MP		Integer(0 .. 16383)	[22]	
>1.28 Mcps TDD cell list					
>>UARFCN (Nt)	MP		Integer(0 .. 16383)	[22]	

### 13.4.11e MBMS\_PL\_Service\_Restriction\_Info\_dedicated

This variable stores the value of the IE "MBMS PL Service Restriction Information" restriction applicable to preferred frequency received in the latest Radio Bearer Control or Cell Update Confirm message.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED	MP		Enumerated (TRUE, FALSE)	Set to FALSE when entering UTRA connected mode.	REL-6

## 13.4.12 MEASUREMENT\_IDENTITY

This variable stores the measurements configured in the UE. For each configured measurement, the information below shall be stored.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
MEASUREMENT CONTROL	OP		MEASUREMENT CONTROL 10.2.17, System Information Block type 11 10.2.48.8.12, System Information Block type 12 10.2.48.8.13	Information as contained in these messages. Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure (8.4.1.8-8.4.1.9). Cleared when leaving UTRA RRC connected mode when not stated otherwise in the procedure (8.4.1.9a).

## 13.4.13 Void

### 13.4.13a MIMO\_PARAMS

This variable indicates the values of the parameters for operation in MIMO mode. See subclause 8.5.xx for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE mode	MP				REL-8
>FDD					REL-8
>>MIMO N_cqi_typeA/M_cqi ratio	OP		Enumerated(1/2, 2/3, 3/4, 4/5, 5/6, 6/7, 7/8, 8/9, 9/10, 1/1)		
>>MIMO pilot configuration	OP		MIMO pilot configuration 10.3.6.41b		
>>Precoding weight set restriction	OP		Enumerated (TRUE)	If present, UE applies precoding weight set restriction.	REL-7
>TDD					REL-8
>>CHOICE TDD option	MP				REL-8
>>>1.28 Mcps TDD					REL-8
>>>>MIMO SF Mode for HS-PDSCH dual stream	MP		Enumerated (SF1, SF1/SF16)		REL-8
>>>>HS-SICH Reference Signal Info	OP	<1 to maxHSSC CHs >		The order of the list corresponds to the order of HS-SCCHs in HS-SCCH info	REL-8
>>>>> Reference Signal Midamble configuration	MP		Integer (2, 4, 6, 8, 10, 12, 14, 16)	Midamble Allocation mode is UE specific midamble allocation	REL-8
>>>>>Reference Signal Midamble Shift	MP		Integer (0..15)	The allocated midamble shift.	REL-8
>>>>>Reference Signal Timeslot number	MP		Integer (1..5)		REL-8
>>>>>3.84 Mcps TDD or 7.68 Mcps TDD				(no data)	REL-8

### 13.4.13b MIMO\_STATUS

This variable indicates whether the UE is operating in MIMO mode. See subclause 8.5.wv for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
MIMO status	MP		Boolean	TRUE means the UE is operating in MIMO mode.  Cleared when leaving CELL_DCH state.	

### 13.4.14 ORDERED\_RECONFIGURATION

This variable stores information about an ongoing Reconfiguration procedure.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Ordered reconfiguration	MP		Boolean	TRUE means that a Reconfiguration procedure is ongoing. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.14a PDCP\_ROHC\_TARGET\_MODE

This variable contains the ROHC target mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Target Mode	OP		Enumerated (O-mode, R-mode)	The UE shall only transit to the signalled mode for operation of ROHC as described in [36].	REL-5

### 13.4.15 PDCP\_SN\_INFO

This variable contains PDCP receive sequence numbers for one or several radio bearers to be included in a response message to UTRAN.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
RB with PDCP information list	OP	1 to <maxRBall RABs>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>RB with PDCP information	MP		RB with PDCP information 10.3.4.22	

### 13.4.15a PHYSICAL\_SHARED\_CHANNEL\_CONFIGURATION

This variable is used only for TDD to store information about the physical shared channel configuration in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
PUSCH configuration	OP			Cleared when entering and leaving UTRA RRC connected mode.
>PUSCH info	MP		PUSCH info 10.3.6.63	
>PUSCH Identity	OP		Integer(1..hiPUSCHidentities)	
>PUSCH power control info	OP		PUSCH power control info 10.3.6.65	
PDSCH configuration	OP			Cleared when entering and leaving UTRA RRC connected mode.
>PDSCH Info	MP		PDSCH Info 10.3.6.44	
>PDSCH Identity	OP		Integer(1..hiPDSCHidentities)	
>PDSCH power control info	OP		PDSCH power control info 10.3.6.45	
ISCP Timeslot list	OP	1 to maxTS		Cleared when entering and leaving UTRA RRC connected mode.
>Timeslot number	MP		Timeslot number 10.3.6.84	Timeslot numbers, for which the UE shall report the timeslot ISCP in PUSCH CAPACITY REQUEST message

### 13.4.15b PPAC\_PARAM

This variable contains Paging Permission with Access Control Parameters during the connected mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Paging Response Restriction Indication	MP		Enumerated(All, CS, PS, None)	Cleared when leaving UTRA RRC connected mode.	REL-8
Location/Registration Restriction Indicator	MP		Enumerated(All, CS, PS)	Cleared when leaving UTRA RRC connected mode.	REL-8
Location/Registration	MP		Location/Registration Parameters 10.3.1.70a	Cleared when leaving UTRA RRC connected mode.	REL-8

### 13.4.15c PRIORITY\_INFO\_LIST

This variable contains cell information on UTRA and inter-RAT priorities to be applied to neighbour cells stored in CELL\_INFO\_LIST and EUTRA\_FREQUENCY\_INFO\_LIST, as received in messages System Information Block Type 19 and UTRAN MOBILITY INFORMATION.

The contents of this variable are inherited at inter-RAT cell (re)selection, including the remaining validity time (i.e., T320 in E-UTRAN, T322 in UTRAN, and T3230 in GERAN), if configured.

This variable can be configured in CELL\_DCH, CELL\_FACH, CELL\_PCH, URA\_PCH and Idle states. However, it is only used in CELL\_FACH, CELL\_PCH, URA\_PCH and Idle states.

In *Camped on any cell* in [4], the UE implicitly takes actions as described in subclause 8.1.1.6.19 assuming the IE "Priority status" equals "sys\_info\_priority" using stored System information Block type 19. In *Camped normally* in [4], if the UE assumes it has valid UE specific priorities according to [4], the UE implicitly takes actions as described in subclause 8.6.7.23 without stopping T322 using stored IE "Dedicated Priority Information".

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Priority status	MP		Enumerated (sys_info_priority, dedicated_priority)		REL-8
UTRA Serving Cell	OP				REL-8
>priority	OP		Integer (0..<maxPriority-1>)	Absence of this IE indicates that the lowest priority is assigned to the serving frequency (lower than any assigned priority)	REL-8
>S <sub>prioritysearch1</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
>S <sub>prioritysearch2</sub>	MD		Integer (0..7 by step of 1)	dB, default value is 0	REL-8
>Thresh <sub>serving,low</sub>	MP		Integer (0..62 by step of 2)	RSCP, dB	REL-8
Priority Info List	OP	1 to <maxNumPrio>			REL-8

>>>>Thresh <sub>x, low</sub>	OP		Integer (0..62 by step of 2)	GSM RSSI, dB	REL-8
E-UTRA detection	OP		Boolean	"TRUE" means that the UE may detect the presence of a E-UTRA cell and report to NAS	REL-8

### 13.4.16 PROTOCOL\_ERROR\_INDICATOR

This variable indicates whether there exist a protocol error that is to be reported to UTRAN.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Protocol error indicator	MP		Protocol error indicator 10.3.3.27	Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.17 PROTOCOL\_ERROR\_INFORMATION

This variable contains diagnostics to be reported to UTRAN for a message that was not completely understood.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Protocol error information	OP		Protocol error information 10.3.8.12	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.18 PROTOCOL\_ERROR\_REJECT

This variable indicates whether there has occurred a severe protocol error causing the ongoing procedure to fail.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Protocol error reject	MP		Boolean	TRUE: a severe protocol error has occurred. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.19 RB\_TIMER\_INDICATOR

This variable contains information to be sent to UTRAN if any of the timers T314 or T315 has expired when the UE sends a cell update with cause RL failure.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
RB timer indicator	OP		RB timer indicator 10.3.3.28	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.20 RB\_UPLINK\_CIPHERING\_ACTIVATION\_TIME\_INFO

This variable contains information to be sent to UTRAN about when a new ciphering configuration shall be activated in the uplink for radio bearers using RLC-AM or RLC-UM.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
RB uplink ciphering activation time info	OP		RB activation time info 10.3.4.13	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.20o RNC\_CAPABILITY\_CHANGE\_SUPPORT

This variable indicates whether the serving RNC supports changes of UE capability in connected mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
RNC support for change of UE capability	MP		Boolean	Cleared when leaving UTRA RRC connected mode.

### 13.4.20oo READY\_FOR\_COMMON\_EDCH

In CELL\_FACH state or Idle mode, this variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCH and E-PUCH transmission procedure for 1.28 Mcps TDD can be immediately started by the UE. See subclause 8.5.47 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Ready for common EDCH	MP		Boolean	See subclause 8.5.47	REL-8

### 13.4.20a SECURITY\_MODIFICATION

This variable contains information on which CN domain is affected by the ongoing security reconfiguration.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Status for each CN domain	MP	<1 to maxCNDo mains>		
>CN domain identity	MP		CN domain identity 10.3.1.1	
>Status	MP		Enumerated( Affected, Not Affected)	

### 13.4.21 Void

### 13.4.22 START\_THRESHOLD

This variable contains information about the maximum allowed value of the START for a CN domain.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
THRESHOLD	OP		Integer (0..1048576)	20 bits. Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. Cleared when leaving UTRA RRC connected mode.

### 13.4.23 START\_VALUE\_TO\_TRANSMIT

This variable contains the value of START for new radio bearer(s) to be transmitted in a response message.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
START	OP		START 10.3.3.38	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.23a TARGET\_CELL\_PRECONFIGURATION

This variable indicates whether HS-SCCH reception procedures are configured for a target cell for which HS-DSCH serving Cell Change may be initiated by HS-SCCH order sent from target cell. See subclause 8.3.4.3 and 8.5.52 for actions related to the setting of this variable.

NOTE: FDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Serving Cell Change MAC reset	OP		Boolean		REL-8
Serving Cell Change Message Type	OP		Enumerated (RadioBearerSetup, RadioBearerReconfiguration, TransportChannelReconfiguration, PhysicalChannelReconfiguration)		REL-8
Serving Cell Change Transaction Id	OP		Integer (0..3)		REL-8
Target cell preconfigurations	OP	1 to <maxRL>			REL-8
>Primary scrambling code	MP		Integer(0..511)		REL-8
>Target cell preconfiguration information	MP		Target cell preconfiguration information 10.3.6.79a		REL-8

### 13.4.24 TFC\_SUBSET

This variable contains information about the TFC subset(s) applicable to the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>mode</i>	MP				
>FDD					
>>Current TFC subset	MP		Transport Format Combination Subset 10.3.5.22	Set to "Full transport format set" when entering UTRA RRC connected mode when not stated otherwise in the procedure.	
>>Duration	OP		TFC Control duration 10.3.6.80	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.	
>>Default TFC subset	OP		Transport Format Combination Subset 10.3.5.22	The TFC subset to go back to when any temporary limitation is released. Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.	

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
>>TFC subset list	MP	1 to <maxTF Csub>			REL-4
>>>TFC subset	MP		Transport Format Combination Subset 10.3.5.22		REL-4
>TDD					
>>TFCS list	MP	1 to <maxCCT rCH >		One TFCS is created when entering UTRA RRC connected mode when not stated otherwise in the procedure.	
>>>TFCS identity	MP		Transport Format Combination Set Identity 10.3.5.21	"TFCS ID" is set to 1 when entering UTRA RRC connected mode when not stated otherwise in the procedure. "Shared channel indicator" is set to FALSE when entering UTRA RRC connected mode when not stated otherwise in the procedure.	
>>>>Current TFC subset	MP		Transport Format Combination Subset 10.3.5.22	Set to "Full transport format set" when entering UTRA RRC connected mode when not stated otherwise in the procedure.	
>>>>>Duration	OP		TFC Control duration 10.3.6.80	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.	
>>>>>Default TFC subset	OP		Transport Format Combination Subset 10.3.5.22	The TFC subset to go back to when any temporary limitation is released. Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.	
>>TFC subset list	MP	1 to <maxTF Csub2>			REL-4
>>>TFCS identity	MP		Transport Format Combination Set Identity 10.3.5.21		REL-4
>>>>TFC subset	MP		Transport Format Combination Subset 10.3.5.22		REL-4

### 13.4.25 TGPS\_IDENTITY

This variable contains the configuration parameters of all the configured compressed mode transmission gap pattern sequences.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Transmission gap pattern sequence	OP	1 to <maxTGP S>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>TGPSI	MP		TGPSI 10.3.6.82	
>TGPS Status Flag	MP		Enumerated(activate, deactivate)	This flag indicates whether the Transmission Gap Pattern Sequence shall be activated or deactivated.
> Current TGPS Status Flag	MP		Enumerated(active, inactive)	This flag indicates the current status of the Transmission Gap Pattern Sequence, whether it is active or inactive
>TGCFN	CV-Active		Integer (0..255)	Connection Frame Number of the first frame of the first pattern within the Transmission Gap Pattern Sequence.
>Transmission gap pattern sequence configuration parameters	MP			Information as contained in the IE group "Transmission gap pattern sequence configuration parameters" in IE "DPCH compressed mode info" 10.3.6.33.

Condition	Explanation
Active	This IE is mandatory present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise.

### 13.4.26 TGSN\_REPORTED

This variable specifies whether an IE "Proposed TGSN" was reported to the UTRAN

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Proposed TGSN reported	MP		Boolean	Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.26a TIMERS\_AND\_CONSTANTS

This variable contains the values for all timers and constants used in connected mode.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
UE Timers and constants in connected mode	MD		UE Timers and constants in connected mode 10.3.3.43	Default value means that for all timers and constants - for parameters with need MD, the defaults specified in 10.3.3.43 apply and - for parameters with need OP, the parameters are absent.  All parameters are set to the default value when leaving UTRA RRC connected mode to another RAT.

### 13.4.27 TRANSACTIONS

This variable stores the identifications of the ongoing RRC procedure transactions.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Accepted transactions	OP	1 to <maxtrans actions>		Cleared when leaving UTRA RRC connected mode.
>Message type	MP		Message Type	
>RRC transaction identifier	MP		RRC transaction identifier 10.3.3.36	
Rejected transactions	OP	1 to <maxtrans actions>		Cleared when leaving UTRA RRC connected mode.
>Message type	MP		Message Type	
>RRC transaction identifier	MP		RRC transaction identifier 10.3.3.36	
Processed transactions	OP	1 to <maxtrans actions>		Cleared when leaving UTRA RRC connected.
>Message type	MP		Message Type	
>RRC transaction identifier	MP		RRC transaction identifier 10.3.3.36	

### 13.4.27o Void

### 13.4.27a TRIGGERED\_1A\_EVENT

This variable contains information about a 1a event that has been triggered in the UE. There is one such variable per 1a event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to <		Cleared when entering UTRA

Information Element/Group name	Need	Multi	Type and reference	Semantics description
		maxCellMeas>		RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting
Cells recently triggered	OP	1 to < maxCellMeas>		
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting
Periodical reporting running	MP		Boolean	

### 13.4.27b TRIGGERED\_1B\_EVENT

This variable contains information about a 1b event that has been triggered in the UE. There is one such variable per 1b event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
Cells triggered	OP	1 to < maxCellMeas>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.	
>primary CPICH	MP		Primary CPICH info 10.3.6.60		
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting	REL-5
Cells recently triggered	OP	1 to < maxCellMeas>			REL-5
>primary CPICH	MP		Primary CPICH info 10.3.6.60		REL-5
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting.	REL-5
Periodical reporting running	MP		Boolean		REL-5

### 13.4.27c TRIGGERED\_1C\_EVENT

This variable contains information about a 1c event that has been triggered in the UE. There is one such variable per 1c event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting
Cells recently triggered	OP	1 to < maxCellMeas>		
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
>sent reports	MP		Integer(1..Infinity)	Number of reports sent to UTRAN in case of event triggered periodical reporting
Periodical reporting running	MP		Boolean	

### 13.4.27d BEST\_CELL\_1D\_EVENT

This variable contains information about a 1d event that has been triggered in the UE. There is one such variable per 1d event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Best cell	OP		Primary CPICH info 10.3.6.60	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.27e TRIGGERED\_1E\_EVENT

This variable contains information about a 1e event that has been triggered in the UE. There is one such variable per 1e event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
Cells recently triggered	OP	1 to < maxCellMeas>		
>primary CPICH	MP		Primary CPICH info 10.3.6.60	

### 13.4.27f TRIGGERED\_1F\_EVENT

This variable contains information about a 1f event that has been triggered in the UE. There is one such variable per 1f event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.
>primary CPICH	MP		Primary CPICH info 10.3.6.60	
Cells recently triggered	OP	1 to < maxCellMeas>		
>primary CPICH	MP		Primary CPICH info 10.3.6.60	

### 13.4.27f1 TRIGGERED\_1G\_EVENT

This variable contains information about a 1g event that has been triggered in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		
>Primary CCPCH info	MP		Primary CCPCH info 10.3.6.57	

### 13.4.27f2 TRIGGERED\_1H\_EVENT

This variable contains information about a 1h event that has been triggered in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		
>Primary CCPCH info	MP		Primary CCPCH info 10.3.6.57	

### 13.4.27f3 TRIGGERED\_1I\_EVENT

This variable contains information about a 1i event that has been triggered in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Cells triggered	OP	1 to < maxCellMeas>		
>Primary CCPCH info	MP		Primary CCPCH info 10.3.6.57	

### 13.4.27f4 BEST\_FREQUENCY\_2A\_EVENT

This variable contains information about a 2a event that has been configured in the UE. There is one such variable per 2a event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Best frequency	MP		Frequency info 10.3.6.36	

### 13.4.27f5 TRIGGERED\_2B\_EVENT

This variable contains information about a 2b event that has been configured in the UE. There is one such variable per 2b event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Frequency triggered	OP	1 to <maxCellMeas>		
>Frequency	MP	Frequency info 10.3.6.36		

### 13.4.27f6 TRIGGERED\_2C\_EVENT

This variable contains information about a 2c event that has been configured in the UE. There is one such variable per 2c event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Frequency triggered	OP	1 to <maxCellMeas>		
>Frequency	MP	Frequency info 10.3.6.36		

### 13.4.27f7 TRIGGERED\_2D\_EVENT

This variable contains information about a 2d event that has been configured in the UE. There is one such variable per 2d event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Event triggered	OP		Boolean	

### 13.4.27f8 TRIGGERED\_2E\_EVENT

This variable contains information about a 2e event that has been configured in the UE. There is one such variable per 2e event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Frequency triggered	OP	1 to <maxCellMeas>		
>Frequency	MP	Frequency info 10.3.6.36		

### 13.4.27f9 TRIGGERED\_2F\_EVENT

This variable contains information about a 2f event that have been configured in the UE. There is one such variable per 2f event configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Event triggered	OP		Boolean	

### 13.4.27f10 TRIGGERED\_3A\_EVENT

This variable contains information about a 3a event that has been configured in the UE. There is one such variable per event 3a configured in the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CHOICE <i>system</i>	OP

Condition	Explanation
GANSS-ID-SBAS	The IE is mandatory present if the IE "GANSS ID" is "SBAS" and never stored otherwise.

### 13.4.29 UNSUPPORTED\_CONFIGURATION

This variable indicates whether a received message contained a configuration that is not supported by the UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
Unsupported configuration	MP		Boolean	TRUE: An unsupported configuration has been detected. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode.

### 13.4.30 URA\_IDENTITY

This variable stores the assigned URA identity for this UE when in URA\_PCH state.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
URA identity	OP		URA identity 10.3.2.6	Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode.

### 13.4.31 U\_RNTI

This variable stores the assigned U-RNTI for this UE.

Information Element/Group name	Need	Multi	Type and reference	Semantics description
U-RNTI	OP		U-RNTI 10.3.3.47	Cleared when leaving UTRA RRC connected mode.

### 13.4.32 VALUE\_TAG

This variable contains information about the value tag for the last received system information block of a given type, for all system information blocks using value tags. The UE shall maintain one instance of this variable for the current selected cell. The UE may store several instances of this variable, one for each cell, to be used if the UE returns to these cells.

All IEs in this variable shall be cleared when switched off. All IEs in this variable except for the IE "SIB 16 value tag list" shall be cleared at selection of a new cell and this cell broadcasts an IE "PLMN Identity" in the MIB which is different from the IE "PLMN Identity" broadcast in the MIB in the previously selected cell. The IE "SIB 16 value tag list" is cleared when NAS informs AS about a new selected PLMN.

Condition	Explanation
<i>GSM</i>	This information is optional when the UE is operating in "GSM-MAP mode" and never stored otherwise.
<i>ANSI</i>	This information is optional when the UE is operating in "ANSI-41 mode" and never stored otherwise.
<i>GANSS-ID-SBAS</i>	The IE is mandatory present if the IE "GANSS ID" is "SBAS" and never stored otherwise.

### 13.4.33 CONTROL\_CHANNEL\_DRX\_PARAMS

NOTE: For 1.28 Mcps TDD only.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE parameters for Control Channel DRX	MP		Control Channel DRX Information 1.28Mcps TDD in 10.3.6.107		REL-8

### 13.4.34 CONTROL\_CHANNEL\_DRX\_STATUS

NOTE: For 1.28 Mcps TDD only.

This variable indicates whether discontinuous reception of Control Channel procedures is enable. See subclause 8.5.53 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
CONTROL_CHANNEL_DRX_STATUS	MP		Boolean	TRUE: control channel discontinuous reception is enable. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-8

### 13.4.35 E\_DCH\_SPS\_PARAMS

NOTE: For 1.28 Mcps TDD only.

This variable contains the parameters for E-DCH Semi-persistent Scheduling. The parameters are listed in subclause 10.3.6.111.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE parameters for E-DCH SPS	MP		E-DCH SPS Information 1.28Mcps TDD in 10.3.6.111		REL-8

### 13.4.36 E\_DCH\_SPS\_STATUS

NOTE: For 1.28 Mcps TDD only.

This variable indicates whether E-DCH Semi-persistent Scheduling procedures are ongoing. See subclause 8.5.54 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
E_DCH_SPS_STATUS	MP		Boolean	TRUE: E-DCH SPS operation is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-8

### 13.4.37 HS\_DSCH\_SPS\_PARAMS

NOTE: For 1.28 Mcps only.

This variable contains the parameters for HS-DSCH Semi-persistent Scheduling. The parameters are listed in subclause 10.3.6.112.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
UE parameters for HS-DSCH SPS	MP		HS-DSCH SPS Information 1.28Mcps TDD in 10.3.6.112		REL-8

### 13.4.38 HS\_DSCH\_SPS\_STATUS

NOTE: For 1.28 Mcps only.

This variable indicates whether HS-DSCH Semi-persistent Scheduling procedures are ongoing. See subclause 8.5.55 for actions related to the setting of this variable.

Information Element/Group name	Need	Multi	Type and reference	Semantics description	Version
HS_DSCH_SPS_STATUS	MP		Boolean	TRUE: HS-DSCH SPS is ongoing. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode.	REL-8

## 13.5 UE RRC Procedure Performance

This subclause defines the performance requirements related to RRC procedures in the UE. Where the total delay is impacted by processing of variable length on the physical layer (e.g. physical layer synchronisation), references to appropriate specifications are given.

## 13.5.1 Definitions

The following definitions of N1 and N2 are valid only for this UE RRC Procedure Performance specification.

N1 = upper limit on the time required to execute modifications in UE after the reception of a UTRAN -> UE message has been completed. Where applicable (e.g. the physical layer transmission is impacted), the changes shall be adopted in the beginning of the next TTI starting after N1. N1 is specified as a multiple of 10 ms.

N2 = number of 10 ms radio frames from end of reception of UTRAN -> UE message on UE physical layer before the transmission of the UE -> UTRAN response message must be ready to start on a transport channel with no access delay other than the TTI alignment (e.g. DCH, therefore excluding delays caused by RACH procedure etc). The UE response message transmission from the physical layer shall begin at the latest  $(N2*10)+TTI$  ms after completion of the reception of the last TTI carrying the triggering UTRAN -> UE message. When Target State is CELL\_DCH, the UE response message transmission from the physical layer may be additionally delayed by the value of IE "SRB delay".

N1 and N2 are independent (e.g.  $N2-N1$  is not restricted to being less than or equal to 10ms).

## 13.5.2 RRC procedure performance values

NOTE: Times indicated in the table do not include cell reselection.

Procedure title:	UTRAN -> UE	UE -> UTRAN	N1	N2	Notes
<b>RRC Connection Management Procedures</b>					
Broadcast of system information	SYSTEM INFORMATION				N2 is not applicable for any system information messages, because there is no response message from the UE.
Master Information Block	SYSTEM INFORMATION		5	NA	No system information data shall be lost due to processing of a MIB received with no detectable errors. This means that the UE shall buffer all system information data received after the MIB until the data can be processed according to the information in the MIB, unless the MIB was received erroneously.
System Information Block type 1	SYSTEM INFORMATION		10	NA	
System Information Block type 2	SYSTEM INFORMATION		10	NA	
System Information Block type 3	SYSTEM INFORMATION		10	NA	
System Information Block type 4	SYSTEM INFORMATION		10	NA

System Information Block type 19	SYSTEM INFORMATION		10	NA	
System Information Block type 20	SYSTEM INFORMATION		10	NA	
System Information Change Indication	SYSTEM INFORMATION		10	NA	
RRC connection establishment <i>Target state CELL_DCH</i>	RRC CONNECTION SETUP	RRC CONNECTION SETUP COMPLETE	10	NA	N1 measures time to the start of tx / rx on DPCH. N2 cannot be specified, because RRC CONNECTION SETUP COMPLETE message is transmitted only after physical layer synchronisation, which also depends on the Node B.  The performance of the physical layer synchronisation procedure is specified in [19] and [20]
RRC connection establishment <i>Target state CELL_FACH</i>	RRC CONNECTION SETUP	RRC CONNECTION SETUP COMPLETE	10	11	N1 and N2 applicable as defined (N2 can be tested from the initiation of the power ramp on RACH).
RRC connection release <i>From CELL_DCH state</i>	RRC CONNECTION RELEASE	RRC CONNECTION RELEASE COMPLETE	5	8	N1 sets the requirement for the time from the completion of the last repetition of the RRC CONNECTION RELEASE COMPLETE message to the release of the physical channel.  N2 sets the requirement from the end of successful reception of the RRC CONNECTION RELEASE message to the start of the first transmission of the RRC CONNECTION RELEASE COMPLETE message.
RRC connection release <i>From CELL_FACH state</i>	RRC CONNECTION RELEASE	RRC CONNECTION RELEASE COMPLETE	NA	11	N1 represents UE internal configuration that cannot be externally observed.
Paging	PAGING TYPE 1	CELL UPDATE	10	11+ T	T is the repetition period of SIB7 (applicable for FDD) and SIB14 (applicable for TDD)
UE capability enquiry	UE CAPABILITY ENQUIRY	UE CAPABILITY INFORMATION	NA	8	N1 is not applicable because the UE configuration does not change.
Security mode control	SECURITY MODE COMMAND	SECURITY MODE COMPLETE	5	8	
Signalling connection release procedure	SIGNALLING CONNECTION RELEASE		5	NA	N2 is not applicable because there is no response message.
Counter check	COUNTER CHECK	COUNTER CHECK RESPONSE	NA	8	N1 is not applicable because the UE configuration does not change.

Procedure title:	UTRAN -> UE	UE -> UTRAN	N1	N2	Notes
ETWS Primary Notification with Security	ETWS PRIMARY NOTIFICATION WITH SECURITY		10	NA	N2 is not applicable because there is no response message.
<b>Radio Bearer control procedures</b>					
Radio bearer establishment <i>Target state CELL_DCH</i>	RADIO BEARER SETUP	RADIO BEARER SETUP COMPLETE / FAILURE	10	NA	N2 cannot be specified, because the RADIO BEARER SETUP COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
Radio bearer establishment <i>From state CELL_FACH to state CELL_FACH</i>	RADIO BEARER SETUP	RADIO BEARER SETUP COMPLETE / FAILURE	10	11	
Radio bearer establishment <i>From CELL_DCH to CELL_FACH</i>	RADIO BEARER SETUP	RADIO BEARER SETUP COMPLETE	NA	NA	N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER SETUP COMPLETE
Radio bearer reconfiguration <i>Target state CELL_DCH</i>	RADIO BEARER RECONFIGURATION	RADIO BEARER RECONFIGURATION COMPLETE / FAILURE	5 or 10	NA	N2 cannot be specified, because the RADIO BEARER RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B. NOTE 1
Radio bearer reconfiguration <i>From Idle Mode and state CELL_FACH to state CELL_DCH</i>	RADIO BEARER RECONFIGURATION	RADIO BEARER RECONFIGURATION COMPLETE / FAILURE	10	11	This requirement applies when the UE has a common E-DCH resource and is not required to perform any synchronization.
Radio bearer reconfiguration <i>From state CELL_FACH to state CELL_FACH</i>	RADIO BEARER RECONFIGURATION	RADIO BEARER RECONFIGURATION COMPLETE / FAILURE	10	11	
Radio bearer reconfiguration <i>From state CELL_DCH to state CELL_FACH</i>	RADIO BEARER RECONFIGURATION	RADIO BEARER RECONFIGURATION COMPLETE	NA	NA	N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER RECONFIGURATION COMPLETE
Radio bearer release <i>Target state CELL_DCH</i>	RADIO BEARER RELEASE	RADIO BEARER RELEASE COMPLETE / FAILURE	10	11	
Radio bearer release <i>From state CELL_FACH to state CELL_FACH</i>	RADIO BEARER RELEASE	RADIO BEARER RELEASE COMPLETE / FAILURE	10	11	
Radio bearer release <i>From state CELL_DCH to state CELL_FACH</i>	RADIO BEARER RELEASE	RADIO BEARER RELEASE COMPLETE	NA	NA	N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending RADIO BEARER RECONFIGURATION COMPLETE

Procedure title:	UTRAN -> UE	UE -> UTRAN	N1	N2	Notes
Transport channel reconfiguration <i>Target state CELL_DCH</i>	TRANSPORT CHANNEL RECONFIGURATION	TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE	5 or 10	NA	N2 cannot be specified, because the TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B. NOTE 1
Transport channel reconfiguration <i>From state CELL_FACH to state CELL_FACH</i>	TRANSPORT CHANNEL RECONFIGURATION	TRANSPORT CHANNEL RECONFIGURATION COMPLETE / FAILURE	10	11	
Transport channel reconfiguration <i>From state CELL_DCH to state CELL_FACH</i>	TRANSPORT CHANNEL RECONFIGURATION	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	NA	NA	N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending TRANSPORT CHANNEL RECONFIGURATION COMPLETE
Transport format combination control <i>AM or UM RLC mode</i>	TRANSPORT FORMAT COMBINATION CONTROL	TRANSPORT FORMAT COMBINATION CONTROL FAILURE	5	8	
Transport format combination control <i>Transparent mode</i>	TRANSPORT FORMAT COMBINATION CONTROL		5	NA	N2 is not applicable because no response message is defined.
Physical channel reconfiguration <i>Target state CELL_DCH</i>	PHYSICAL CHANNEL RECONFIGURATION	PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE	5 or 8	NA	N2 cannot be specified, because the PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B. NOTE 1
Physical channel reconfiguration <i>From state CELL_FACH to state CELL_FACH</i>	PHYSICAL CHANNEL RECONFIGURATION	PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE	8	9	
Physical channel reconfiguration <i>From state CELL_DCH to state CELL_FACH</i>	PHYSICAL CHANNEL RECONFIGURATION	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	NA	NA	N1 and N2 cannot be specified, because UE need to read SIBs on BCH before sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE
Physical Shared Channel Allocation [TDD only]	PHYSICAL SHARED CHANNEL ALLOCATION		5	NA	N2 is not applicable because no response message is defined.
Uplink Physical Channel Control [TDD only]	UPLINK PHYSICAL CHANNEL CONTROL		8	NA	Requirements for outer loop and timing advance adjustments are defined in [22] and [20]. N2 is not applicable because there is no response message.
<b>RRC connection mobility procedures</b>					

Procedure title:	UTRAN -> UE	UE -> UTRAN	N1	N2	Notes
Cell update	CELL UPDATE CONFIRM	UTRAN MOBILITY INFORMATION CONFIRM	5	8	
		PHYSICAL CHANNEL RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_FACH</i>	8	9	
		PHYSICAL CHANNEL RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_DCH</i>	8	NA	N2 cannot be specified, because the PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
		TRANSPORT CHANNEL RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_FACH</i>	10	11	
		TRANSPORT CHANNEL RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_DCH</i>	10	NA	N2 cannot be specified, because the PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
		RADIO BEARER RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_FACH</i>	10	11	
		RADIO BEARER RECONFIGURATION COMPLETE <i>Target state</i> <i>CELL_DCH</i>	10	NA	N2 cannot be specified, because the PHYSICAL CHANNEL RECONFIGURATION COMPLETE / FAILURE message is transmitted only after physical layer synchronisation, which depends also on Node B.
		RADIO BEARER RELEASE COMPLETE <i>Target state</i> <i>CELL_DCH</i>	10	11	
URA update	URA UPDATE CONFIRM	UTRAN MOBILITY INFORMATION CONFIRM	5	8	
UTRAN mobility information	UTRAN MOBILITY INFORMATION	UTRAN MOBILITY INFORMATION CONFIRM / FAILURE	5	8	

Procedure title:	UTRAN -> UE	UE -> UTRAN	N1	N2	Notes
Active set update	ACTIVE SET UPDATE	ACTIVE SET UPDATE COMPLETE / FAILURE	NA	5	The requirements on UE combining and power control performance for both UL and DL are specified by RAN WG4 in [21] and [19].  Also in case of branch addition the COMPLETE / FAILURE message is transmitted without waiting for the new branch to stabilise, therefore N2 is specified.
Inter-RAT handover to UTRAN	HANDOVER TO UTRAN COMMAND (other system)	HANDOVER TO UTRAN COMPLETE	NA	NA	The performance of this procedure is specified in 3GPP TS 45.010 in case of handover from GSM and 3GPP TS 36.133 in case of handover from E-UTRA.
Inter-RAT handover from UTRAN	HANDOVER FROM UTRAN COMMAND	HANDOVER FROM UTRAN FAILURE	NA	NA	The performance of this procedure is specified in [19] and [20].
<b>Measurement procedures</b>					
Measurement control	MEASUREMENT CONTROL	MEASUREMENT CONTROL FAILURE	5	8	Response to measurement inquiry depends on physical layer measurement. Response time is defined in [19] and [20]. N1 and N2 only define the processing of the message.

NOTE 1: The lower value applies when the UE is ordered to do a serving HS-DSCH cell change, changing no other information than contained in the IE "H-RNTI", the IE "Downlink HS-PDSCH information", the IE "Uplink DPCH power control info" and/or the IE "Serving HS-DSCH radio link indicator" (FDD only).

## 13.6 RB information parameters for signalling radio bearer RB 0

The following Radio Bearer parameter values apply for signalling radio bearer RB0 for TDD and for FDD, if either UE or UTRAN do not support common channel mapping on HS-DSCH:

Information element/ Group name	Value	Comment
RLC info		
>Uplink RLC mode	TM	
>>Transmission RLC discard	omitted	Neither discard is used, nor will there be a reset
>>Segmentation indication	FALSE	
>Downlink RLC mode	UM	
>>DL UM RLC LI size	7	
RB mapping info		Single multiplexing option
>Uplink mapping info		
>>UL transport channel	RACH	RACH corresponding with selected PRACH
>>RLC size list	N/A	If available the size in the IE 'Additional Dynamic Transport Format Information for CCCH' for the transport channel used. Else the first TF defined in the Transport Format Set for the transport channel is used.
>>MAC logical channel priority	1	
>Downlink mapping info		
>>DL transport channel	FACH	

Procedure descriptions in subclause 8.6.4.8 shall not be applied for the IE "RB mapping info" that is used for signalling radio bearer RB0.

## 13.6a RB information parameters for SHCCH

The following Radio Bearer parameter values apply for SHCCH:

Information element/ Group name	Value	Comment
RLC info		
>Uplink RLC mode	TM	
>>Transmission RLC discard	omitted	Neither discard is used, nor will there be a reset
>>Segmentation indication	FALSE	
>Downlink RLC mode	UM	
RB mapping info		
>Uplink mapping info		Option 1
>>UL transport channel	RACH	RACH corresponding with selected PRACH
>>RLC size list	N/A	The first TF defined in the Transport Format Set for the transport channel that is used
>>MAC logical channel priority	1	
>Downlink mapping info		
>>DL transport channel	FACH	
>Uplink mapping info		Option 2
>>UL transport channel	USCH	
>>UL Transport Channel Identity	1	
>>MAC logical channel priority	1	
>>RLC size list	N/A	The first TF defined in the Transport Format Set for the transport channel that is used
>Downlink mapping info		
>>DL transport channel	DSCH	
>>DL Transport Channel Identity	1	

## 13.6b RB information parameters for BCCH mapped to FACH

The following Radio Bearer parameter values apply for BCCH mapped to FACH:

Information element/ Group name	Value	Comment
Downlink RLC mode	TM	
Segmentation indication	FALSE	

## 13.6c RB information parameters for PCCH mapped to PCH

The following Radio Bearer parameter values apply for PCCH mapped to PCH:

Information element/ Group name	Value	Comment
Downlink RLC mode	TM	
Segmentation indication	FALSE	

## 13.6d Parameters for BCCH mapped to BCH

The transport format parameters for BCH are specified in [34].

## 13.6e RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and RACH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH:

NOTE: FDD only.

Information element/ Group name	Value	Comment
RLC info		
>Uplink RLC mode	TM	
>>Transmission RLC discard	omitted	Neither discard is used, nor will there be a reset
>>Segmentation indication	FALSE	
>Downlink RLC mode	UM	
>>Length indicator size	7	
RB mapping info		Single multiplexing option
>Uplink mapping info		
>>UL transport channel	RACH	RACH corresponding with selected PRACH
>>RLC size list	N/A	If available the size in the IE 'Additional Dynamic Transport Format Information for CCCH' for the transport channel used. Else the first TF defined in the Transport Format Set for the transport channel is used.
>>MAC logical channel priority	1	
>Downlink mapping info		
>>DL transport channel	HS-DSCH	

### 13.6f RB information parameters for BCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for BCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

Information element/ Group name	Value	Comment
Downlink RLC mode	TM	
Segmentation indication	FALSE	
MAC-ehs reordering queue	N/A	No MAC-ehs reordering queue is configured for BCCH reception.

### 13.6g RB information parameters for PCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for PCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

Information element/ Group name	Value	Comment
Downlink RLC mode	TM	
Segmentation indication	FALSE	
MAC-ehs reordering queue	N/A	No MAC-ehs reordering queue is configured for PCCH reception.

### 13.6h RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and common E-DCH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH and E-DCH:

NOTE: FDD and 1.28 Mcps TDD only.

Information element/ Group name	Value	Comment
RLC info		
>Uplink RLC mode	TM	
>>Transmission RLC discard	omitted	Neither discard is used, nor will there be a reset
>>Segmentation indication	FALSE	
>Downlink RLC mode	UM	
>>Length indicator size	7	
RB mapping info		Single multiplexing option
>Uplink mapping info		
>>UL transport channel	E-DCH	E-DCH corresponding with the Node B allocated common E-DCH resource, i.e. UL DPCCH/E-DPCCH/E-DPDCH.
>>RLC size list	N/A	
>>MAC logical channel priority	1	
>Downlink mapping info		
>>DL transport channel	HS-DSCH	

## 13.7 Parameter values for default radio configurations

The UE shall support the use of the default radio configurations that are specified in the following.

NOTE 1: These configurations are based on [41] and cover a number of RAB and signalling connection configurations.

In the table that is used to specify the parameter values for these default configurations, the following principles are used:

- Optional IEs that are not used are omitted;
- In case no parameter value is specified in a column, this means the value given the previous (left side) column applies.

NOTE 2: If needed, signalling radio bearer RB4 is established after the completion of handover.

NOTE 3: For each default configuration, the value of FDD, 3.84 Mcps TDD, 7.68 Mcps TDD and 1.28 Mcps TDD parameters are specified. All parameters apply to FDD, 3.84 Mcps TDD, 7.68 Mcps and 1.28 Mcps TDD modes, unless explicitly stated otherwise. It should be noted that in this respect default configurations differ from pre-defined configurations, which only include parameter values for one mode.

NOTE 4: The transport format sizes, indicated in the following table, concern the RLC PDU size, since all configurations concern dedicated channels. The transport block sizes indicated in TS 34.108 are different since these include the size of the MAC header.

NOTE 5: The tabular values included in this subclause, represent the actual IE values as in clause 10, and not the ASN.1 representation of these values.

NOTE 5A: For TDD, default configurations 0, 1, 5, 6, 7 and 22 are incorrect and they should not be used in this version of the specification.

NOTE 6: The difference between default configuration #22 and default configuration #1 (13.6 kbps signalling) resides in the RLC configuration and the DCH quality target.

## 13.8 Parameter values for default radio configurations in CELL\_FACH

This section is not used in this version of the specifications.

---

# 14 Specific functions

## 14.1 Intra-frequency measurements

### 14.1.1 Intra-frequency measurement quantities

A measurement quantity is used to evaluate whether an intra-frequency event has occurred or not. It can be:

- 1 Downlink  $E_c/N_0$ .
- 2 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.

CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.

Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 3 Downlink received signal code power (RSCP) after despreading.
- 4 ISCP measured on Timeslot basis.

A description of those values can be found in [7] and [8].

### 14.1.2 Intra-frequency reporting events for FDD

Within the measurement reporting criteria field in the Measurement Control message the UTRAN notifies the UE which events should trigger a measurement report. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All the specified events are measured with respect to any of the measurement quantities given in subclause 14.1.1. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) of the cell defined in the measurement object.

Special mechanisms for the events are illustrated in subclause 14.1.4 and 14.1.5.

NOTE: The events below are numbered 1A, 1B, 1C,... since all intra-frequency reporting events would be labelled 1X, inter-frequency reporting events would be labelled 2X, and so on for the other measurement types.

When one intra-frequency measurement identity corresponds to multiple intra-frequency events with identical event identities, the UE behaviour is not specified.

#### 14.1.2.1 Reporting event 1A: A Primary CPICH enters the reporting range

When an intra-frequency measurement configuring event 1a is set up, the UE shall:

- 1> create a variable TRIGGERED\_1A\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1A is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH  $E_c/N_0$ " or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell; and
  - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and if that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1A\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT.
- 1> if the value of "Reporting deactivations threshold" for this event is greater than or equal to the current number of cells in the active set or equal to 0 and any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT:
  - 2> if "Reporting interval" for this event is not equal to 0:
    - 3> if the IE "Periodical reporting running" in the variable TRIGGERED\_1A\_EVENT is set to FALSE:
      - 4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED\_1A\_EVENT to TRUE;
    - 3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT to 1.
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1a"; and
    - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
  - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1A\_EVENT.
- 1> if the timer for the periodical reporting has expired:
  - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1A\_EVENT:
    - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the variable TRIGGERED\_1A\_EVENT:
      - 4> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in variable TRIGGERED\_1A\_EVENT;
      - 4> start a timer with the value of "Reporting interval" for this event;

- 4> send a measurement report with IEs set as below:
  - 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1a"; and
  - 5> include in "cell measurement event results" all entries of the variable TRIGGERED\_1A\_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
  - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 4> if "sent reports" in variable TRIGGERED\_1A\_EVENT is equal to "Amount of reporting" for all entries:
  - 5> set the IE "Periodical Reporting running" in the variable TRIGGERED\_1A\_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or
- 1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":
  - 2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT:
    - 3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1A\_EVENT.
    - 3> if no entry in the variable TRIGGERED\_1A\_EVENT has a value of "sent reports" smaller than "Amount of reporting"; or
    - 3> if there is no entry in the variable TRIGGERED\_1A\_EVENT:
      - 4> if the reporting interval timer is running:
        - 5> stop the reporting interval timer;
        - 5> set the IE "Periodical reporting running" in the variable TRIGGERED\_1A\_EVENT to FALSE.

This event is only applicable to the CELL\_DCH state. When the measurement is setup in CELL\_DCH or upon transition to CELL\_DCH the UE shall:

- 1> if the "Triggering condition 2" includes active set cells:
  - 2> include the primary CPICH of all cells in the current active set into the "cells triggered" in the variable TRIGGERED\_1A\_EVENT with the counter "sent reports" set to "Amount of reporting".

Equation 1 (Triggering condition for pathloss)

$$10 \cdot \text{Log}M_{New} + CIO_{New} \leq W \cdot 10 \cdot \text{Log} \left( 1 / \sum_{i=1}^{N_A} (1/M_i) \right) + (1-W) \cdot 10 \cdot \text{Log}M_{Best} + (R_{1a} - H_{1a} / 2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{New} + CIO_{New} \geq W \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_A} M_i \right) + (1-W) \cdot 10 \cdot \text{Log}M_{Best} - (R_{1a} - H_{1a} / 2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot \text{Log}M_{New} + CIO_{New} > W \cdot 10 \cdot \text{Log} \left( 1 / \sum_{i=1}^{N_A} (1/M_i) \right) + (1-W) \cdot 10 \cdot \text{Log}M_{Best} + (R_{1a} + H_{1a} / 2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log} M_{New} + CIO_{New} < W \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_A} M_i \right) + (1-W) \cdot 10 \cdot \text{Log} M_{Best} - (R_{1a} + H_{1a} / 2),$$

The variables in the formula are defined as follows:

$M_{New}$  is the measurement result of the cell entering the reporting range.

$CIO_{New}$  is the individual cell offset for the cell entering the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

$M_i$  is a measurement result of a cell not forbidden to affect reporting range in the active set.

$N_A$  is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

$M_{Best}$  is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

$M_{Best}$  is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

$W$  is a parameter sent from UTRAN to UE.

$R_{1a}$  is the reporting range constant.

$H_{1a}$  is the hysteresis parameter for the event 1a.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{New}$ ,  $M_i$  and  $M_{Best}$  are expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{New}$ ,  $M_i$  and  $M_{Best}$  are expressed in mW.

#### 14.1.2.2 Reporting event 1B: A primary CPICH leaves the reporting range

When an intra-frequency measurement configuring event 1b is set up, the UE shall:

- 1> create a variable TRIGGERED\_1B\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1B is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/No" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and if that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1B\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1B\_EVENT.
- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1B\_EVENT:
  - 2> if "Periodic reporting info-1b" is present, and "Reporting interval" for this event is not equal to 0:
    - 3> if the IE "Periodical reporting running" in the variable TRIGGERED\_1B\_EVENT is set to FALSE:
      - 4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED\_1B\_EVENT to TRUE;

- 3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the variable TRIGGERED\_1B\_EVENT to 1.
- 2> send a measurement report with IEs set as below:
  - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and
  - 3> include in "cell measurement event results" all entries of "cells recently triggered" in the variable TRIGGERED\_1B\_EVENT in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
  - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 2> move all entries from IE "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1B\_EVENT.
- 1> if the timer for the periodical reporting has expired:
  - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1B\_EVENT:
    - 3> if "Periodic reporting info-1b" is present:
      - 4> if "Reporting interval" is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the variable TRIGGERED\_1B\_EVENT:
        - 5> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in variable TRIGGERED\_1B\_EVENT;
        - 5> start a timer with the value of "Reporting interval-1b" for this event;
        - 5> send a measurement report with IEs set as below:
          - 6> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1b"; and
          - 6> include in "cell measurement event results" all entries of the variable TRIGGERED\_1B\_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
          - 6> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
        - 5> if "sent reports" in variable TRIGGERED\_1B\_EVENT is equal to "Amount of reporting" for all entries:
          - 6> set the IE "Periodical Reporting running" in the variable TRIGGERED\_1B\_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or
- 1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":
  - 2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1B\_EVENT:
    - 3> remove the entry of that primary CPICH from "cells triggered" in the variable TRIGGERED\_1B\_EVENT;
    - 3> if there is no entry in the variable TRIGGERED\_1B\_EVENT:
      - 4> if the reporting interval timer is running:
        - 5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the variable TRIGGERED\_1B\_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \cdot \text{Log}M_{Old} + CIO_{Old} \geq W \cdot 10 \cdot \text{Log} \left( 1 / \sum_{i=1}^{N_A} (1 / M_i) \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{Best} + (R_{1b} + H_{1b} / 2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{Old} + CIO_{Old} \leq W \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{Best} - (R_{1b} + H_{1b} / 2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot \text{Log}M_{Old} + CIO_{Old} < W \cdot 10 \cdot \text{Log} \left( 1 / \sum_{i=1}^{N_A} (1 / M_i) \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{Best} + (R_{1b} - H_{1b} / 2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot \text{Log}M_{Old} + CIO_{Old} > W \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \text{Log}M_{Best} - (R_{1b} - H_{1b} / 2),$$

The variables in the formula are defined as follows:

$M_{Old}$  is the measurement result of the cell leaving the reporting range.

$CIO_{Old}$  is the individual cell offset for the cell leaving the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

$M_i$  is a measurement result of a cell not forbidden to affect reporting range in the active set.

$N_A$  is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

$M_{Best}$  is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

$M_{Best}$  is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

$W$  is a parameter sent from UTRAN to UE.

$R_{1b}$  is the reporting range constant.

$H_{1b}$  is the hysteresis parameter for the event 1b.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{Old}$ ,  $M_i$  and  $M_{Best}$  are expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{Old}$ ,  $M_i$  and  $M_{Best}$  are expressed in mW.

### 14.1.2.3 Reporting event 1C: A non-active primary CPICH becomes better than an active primary CPICH

When an intra-frequency measurement configuring event 1c is set up, the UE shall:

1> create a variable TRIGGERED\_1C\_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1C is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell; and
  - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the active set but the other primary CPICH is any of the primary CPICHs included in the active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1C\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1C\_EVENT.
- 1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1C\_EVENT:
  - 2> if "Reporting interval" for this event is not equal to 0:
    - 3> if the IE "Periodical reporting running" in the variable TRIGGERED\_1C\_EVENT is set to FALSE:
      - 4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED\_1C\_EVENT to TRUE.
    - 3> set "sent reports" for that primary CPICH in the variable TRIGGERED\_1C\_EVENT to 1.
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1c"; and
    - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED\_1C\_EVENT not in the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
  - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1C\_EVENT.
- 1> if the timer for the periodical reporting has expired:
  - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1C\_EVENT, and not included in the current active set:
    - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the variable TRIGGERED\_1C\_EVENT:
      - 4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in variable TRIGGERED\_1C\_EVENT;
      - 4> start a timer with the value of "Reporting interval" for this event;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1c"; and

- 5> include in "cell measurement event results" all entries of the variable TRIGGERED\_1C\_EVENT with value of IE "sent report" equal to or smaller than value of "Amount of reporting" and that are not part of the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;
- 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 4> if "sent reports" in variable TRIGGERED\_1C\_EVENT is equal to "Amount of reporting" for all entries:
  - 5> set the IE "Periodical Reporting running" in the variable TRIGGERED\_1C\_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;
- 1> if a primary CPICH is added to the active set:
  - 2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1C\_EVENT:
    - 3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1C\_EVENT.
    - 3> if no entry in the variable TRIGGERED\_1C\_EVENT has a value of "sent reports" smaller than "Amount of reporting" or
    - 3> if there is no entry in the variable TRIGGERED\_1C\_EVENT:
      - 4> if the reporting interval timer is running:
        - 5> stop the reporting interval timer;
        - 5> set the IE "Periodical reporting running" in the variable TRIGGERED\_1C\_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{New} + CIO_{New} \leq 10 \log M_{mAS} + CIO_{mAS} - H_c / 2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIO_{New} \geq 10 \log M_{mAS} + CIO_{mAS} + H_c / 2$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{New} + CIO_{New} > 10 \log M_{mAS} + CIO_{mAS} + H_c / 2$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIO_{New} < 10 \log M_{mAS} + CIO_{mAS} - H_c / 2$$

The variables in the formula are defined as follows:

$M_{New}$  is the measurement result of the cell not included in the active set.

$CIO_{New}$  is the individual cell offset for the cell becoming better than the cell in the active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

$M_{InAS}$  is the measurement result of the cell in the active set with the highest measurement result.

For other measurement quantities:

$M_{InAS}$  is the measurement result of the cell in the active set with the lowest measurement result.

$CIO_{InAS}$  is the individual cell offset for the cell in the active set that is becoming worse than the new cell.

$H_{1c}$  is the hysteresis parameter for the event 1c.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{New}$  and  $M_{InAS}$  are expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{New}$  and  $M_{InAS}$  are expressed in mW.

**Figure 14.1.2.3-1 [Informative]: A primary CPICH that is not included in the active set becomes better than a primary CPICH that is in the active set**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0. In this example the cells belonging to primary CPICH 1 and 2 are in the active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the active set has been updated after the first measurement report (active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

#### 14.1.2.4 Reporting event 1D: Change of best cell

When an intra-frequency measurement configuring event 1d is set up, the UE shall:

- 1> create a variable TRIGGERED\_1D\_EVENT related to that measurement, which shall initially contain the best cell in the active set when the measurement is initiated;
- 1> delete this variable when the measurement is released.
- 1> As soon as the best cell in the active set has been evaluated by the UE (and stored in the TRIGGERED\_1D\_EVENT variable) and provided that there is more than one cell in the active set, trigger an immediate measurement report with IEs set as below:
  - 2> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH stored in the TRIGGERED\_1D\_EVENT variable;
  - 2> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2

When event 1D is configured in the UE, the UE shall:

1> if IE "useCIO" is present and its value is TRUE, take into account the Cell Individual Offset for evaluation of the Equation 1 and 2, otherwise do not take it into account.

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST\_CELL\_1D\_EVENT, or if "Measurement quantity" is "CPICH Ec/No" or "CPICH RSCP", and Equation 2 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST\_CELL\_1D\_EVENT:

NOTE: If the equations are simultaneously fulfilled for more than one primary CPICH, the UE should report only one event 1D, triggered by the best primary CPICH.

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger" and if IE "Triggering condition 2" is absent or if it is present and that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2":

3> set "best cell" in the variable BEST\_CELL\_1D\_EVENT to that primary CPICH that triggered the event;

3> send a measurement report with IEs set as below:

4> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH that triggered the report.

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

This event is only applicable to the CELL\_DCH state. Upon transition to CELL\_DCH the UE shall:

1> set "best cell" in the variable BEST\_CELL\_1D\_EVENT to the best cell of the primary CPICHs included in the active set.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{NotBest} + CIO_{NotBest} \leq 10 \log M_{Best} + CIO_{Best} - H_{1d} / 2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{NotBest} + CIO_{NotBest} \geq 10 \log M_{Best} + CIO_{Best} + H_{1d} / 2$$

The variables in the formula are defined as follows:

$M_{NotBest}$  is the measurement result of a cell not stored in "best cell" in the variable BEST\_CELL\_1D\_EVENT.

$CIO_{NotBest}$  is the cell individual offset of a cell not stored in "best cell" in the variable BEST\_CELL\_1D\_EVENT.

$M_{Best}$  is the measurement result of the cell stored in "best cell" in variable BEST\_CELL\_1D\_EVENT.

$CIO_{Best}$  is the cell individual offset of a cell stored in "best cell" in the variable BEST\_CELL\_1D\_EVENT.

$H_{1d}$  is the hysteresis parameter for the event 1d.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{NotBest}$  and  $M_{Best}$  are expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{NotBest}$  and  $M_{Best}$  are expressed in mW.

**Figure 14.1.2.4-1 [Informative]: A primary CPICH becomes better than the previously best primary CPICH**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

#### 14.1.2.5 Reporting event 1E: A Primary CPICH becomes better than an absolute threshold

When an intra-frequency measurement configuring event 1e is set up, the UE shall:

- 1> create a variable TRIGGERED\_1E\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1E is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH  $E_c/N_0$ " or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1E\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1E\_EVENT.
- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1E\_EVENT:
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1e"; and
    - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED\_1E\_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
  - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1E\_EVENT.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH  $E_c/N_0$ " or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

- 1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":
  - 2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1E\_EVENT:
    - 3> remove that primary CPICH and sent reports from "cells triggered" in the variable TRIGGERED\_1E\_EVENT.

This event is only applicable to the CELL\_DCH state. When the measurement is setup in CELL\_DCH or upon transition to CELL\_DCH the UE shall:

- 1> if the "Triggering condition 2" includes active set cells:
  - 2> include the primary CPICH of all cells in the current active set that fulfil the equations 1 or 2 according to the "Measurement quantity" of event 1e into the "cells triggered" in the variable TRIGGERED\_1E\_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 \text{Log}M_{New} + CIO_{New} \leq T_{1e} - H_{1e} / 2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \text{Log}M_{New} + CIO_{New} \geq T_{1e} + H_{1e} / 2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \text{Log}M_{New} + CIO_{New} > T_{1e} + H_{1e} / 2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \text{Log}M_{New} + CIO_{New} < T_{1e} - H_{1e} / 2,$$

The variables in the formula are defined as follows:

$M_{New}$  is the measurement result of a cell that becomes better than an absolute threshold.

$CIO_{New}$  is the individual cell offset for the cell becoming better than the absolute threshold. Otherwise it is equal to 0.

$T_{1e}$  is an absolute threshold.

$H_{1e}$  is the hysteresis parameter for the event 1e.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{New}$  is expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{New}$  is expressed in mW.

**Figure 14.1.2.5-1 [Informative]: Event-triggered report when a Primary CPICH becomes better than an absolute threshold**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

#### 14.1.2.6 Reporting event 1F: A Primary CPICH becomes worse than an absolute threshold

When an intra-frequency measurement configuring event 1F is set up, the UE shall:

- 1> create a variable TRIGGERED\_1F\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1F is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and that primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1F\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1F\_EVENT.
- 1> if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1F\_EVENT:
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency event measurement results": "Intrafrequency event identity" to "1f"; and
    - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED\_1F\_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell;
  - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1F\_EVENT.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

- 1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":
  - 2> if that primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1F\_EVENT:
    - 3> remove that primary CPICH from "cells triggered" in the variable TRIGGERED\_1F\_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 \text{Log}M_{Old} + CIO_{Old} \geq T_{I_f} + H_{I_f} / 2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \text{Log}M_{Old} + CIO_{Old} \leq T_{I_f} - H_{I_f} / 2$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \text{Log}M_{Old} + CIO_{Old} < T_{I_f} - H_{I_f} / 2$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \text{Log}M_{Old} + CIO_{Old} > T_{I_f} + H_{I_f} / 2$$

The variables in the formula are defined as follows:

$M_{Old}$  is the measurement result of a cell that becomes worse than an absolute threshold

$CIO_{Old}$  is the individual cell offset for the cell becoming worse than the absolute threshold. Otherwise it is equal to 0.

$T_{I_f}$  is an absolute threshold

$H_{I_f}$  is the hysteresis parameter for the event 1f.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{Old}$  is expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{Old}$  is expressed in mW.

**Figure 14.1.2.6-1 [Informative]: Event-triggered report when a Primary CPICH becomes worse than an absolute threshold**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

### 14.1.2.7 Reporting event 1J: A non-active E-DCH but active DCH primary CPICH becomes better than an active E-DCH primary CPICH

When an intra-frequency measurement configuring event 1j is set up, the UE shall:

- 1> create a variable TRIGGERED\_1J\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1J is configured in the UE, the UE shall:

- 1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:
  - 2> if all required reporting quantities are available for that cell; and
  - 2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the E-DCH active set but included in DCH active set and the other primary CPICH is any of the primary CPICHs included in the E-DCH active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED\_1J\_EVENT:
    - 3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED\_1J\_EVENT.
- 1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the E-DCH active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED\_1J\_EVENT:
  - 2> if "Reporting interval" for this event is not equal to 0:
    - 3> if the IE "Periodical reporting running" in the variable TRIGGERED\_1J\_EVENT is set to FALSE:
      - 4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED\_1J\_EVENT to TRUE.
    - 3> set "sent reports" for that primary CPICH in the variable TRIGGERED\_1J\_EVENT to 1.
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and
    - 3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED\_1J\_EVENT not in the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
  - 2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED\_1J\_EVENT.
- 1> if the timer for the periodical reporting has expired:
  - 2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED\_1J\_EVENT, and not included in the current E-DCH active set but included in DCH active set:
    - 3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the variable TRIGGERED\_1J\_EVENT:
      - 4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in variable TRIGGERED\_1J\_EVENT;
      - 4> start a timer with the value of "Reporting interval" for this event;

- 4> send a measurement report with IEs set as below:
  - 5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and
  - 5> include in "cell measurement event results" all entries of the variable TRIGGERED\_1J\_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" and that are not part of the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;
  - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 4> if "sent reports" in variable TRIGGERED\_1J\_EVENT is equal to "Amount of reporting" for all entries:
  - 5> set the IE "Periodical Reporting running" in the variable TRIGGERED\_1J\_EVENT to FALSE and disable the timer for the periodical reporting.
- 1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;
- 1> if a primary CPICH is added to the E-DCH active set:
  - 2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1J\_EVENT:
    - 3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED\_1J\_EVENT.
    - 3> if no entry in the variable TRIGGERED\_1J\_EVENT has a value of "sent reports" smaller than "Amount of reporting" or
    - 3> if there is no entry in the variable TRIGGERED\_1J\_EVENT:
      - 4> if the reporting interval timer is running:
        - 5> stop the reporting interval timer;
        - 5> set the IE "Periodical reporting running" in the variable TRIGGERED\_1J\_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \log M_{New} + CIQ_{New} \leq 10 \log M_{InAS} + CIQ_{InAS} - H_{1j} / 2$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIQ_{New} \geq 10 \log M_{InAS} + CIQ_{InAS} + H_{1j} / 2$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \log M_{New} + CIQ_{New} > 10 \log M_{InAS} + CIQ_{InAS} + H_{1j} / 2$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \log M_{New} + CIQ_{New} < 10 \log M_{InAS} + CIQ_{InAS} - H_{1j} / 2$$

The variables in the formula are defined as follows:

$M_{New}$  is the measurement result of the cell not included in the E-DCH active set but included in DCH active set.

$CIO_{New}$  is the individual cell offset for the cell not included in the E-DCH active set but included in DCH active set becoming better than the cell in the E-DCH active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

$M_{InAS}$  is the measurement result of the cell in the E-DCH active set with the highest measurement result.

For other measurement quantities:

$M_{InAS}$  is the measurement result of the cell in the E-DCH active set with the lowest measurement result.

$CIO_{InAS}$  is the individual cell offset for the cell in the E-DCH active set that is becoming worse than the new cell.

$H_{IJ}$  is the hysteresis parameter for the event 1J.

If the measurement results are pathloss or CPICH-Ec/No then  $M_{New}$  and  $M_{inAS}$  are expressed as ratios.

If the measurement result is CPICH-RSCP then  $M_{New}$  and  $M_{inAS}$  are expressed in mW.

**Figure 14.1.2.7-1 [Informative]: A primary CPICH that is not included in the E-DCH active set but included in DCH active set becomes better than a primary CPICH that is in the E-DCH active set**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0 and replacement activation threshold is equal to 0 or 1 or 2. In this example the cells belonging to primary CPICH 1 and 2 are in the E-DCH active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the E-DCH active set but included in DCH active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the E-DCH active set has been updated after the first measurement report (E-DCH active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

### 14.1.3 Intra-frequency reporting events for TDD

#### 14.1.3.1 Reporting event 1G: Change of best cell (TDD)

When an intra-frequency measurement configuring event 1g is set up, the UE shall

- 1> create a variable TRIGGERED\_1G\_EVENT related to that measurement, which shall initially be empty.
- 1> store the P-CCPCH of the serving cell in the variable TRIGGERED\_1G\_EVENT as the best cell .
- 1> delete this variable when the measurement is released.

When event 1G is configured in the UE, the UE shall:

- 1> if the equation 1 is fulfilled for one or more P-CCPCHs during the time "Time to trigger"
  - 2> if those P-CCPCHs are not included in the "primary CCPCH info" in the variable TRIGGERED\_1G\_EVENT:
    - 3> include those P-CCPCH in "cells triggered" in the variable TRIGGERED\_1G\_EVENT;
  - 2> update the prebest cell to the best P-CCPCH and for each cell in the variable TRIGGERED\_1G\_EVENT:
    - 3> if Equation 2 below is fulfilled for a primary CCPCH:
      - 4> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED\_1G\_EVENT;
  - 2> send a measurement report with IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1g";
    - 3> set the first entry in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH which was stored in the variable TRIGGERED\_1G\_EVENT;
    - 3> include all entries in "cells triggered" in variable TRIGGERED\_1G\_EVENT in "cell measurement event results" in the measurement report in descending order according to:

$$10 \cdot \text{Log}M + O$$

where  $M$  is the P-CCPCH RSCP and  $O$  the individual offset of a cell;

- 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 1> if Equation 2 below is fulfilled for a primary CCPCH:
  - 2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED\_1G\_EVENT:
    - 3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED\_1G\_EVENT;

The UE shall use the equations below for evaluation of reporting event 1g:

Equation 1

$$10 \cdot \text{Log}M_i + O_i - H_{1g} > 10 \cdot \text{Log}M_{\text{previous\_best}} + O_{\text{previous\_best}}$$

The variables in the formula are defined as follows:

$M_{\text{previous\_best}}$  is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{\text{previous\_best}}$  is the cell individual offset of the previous best cell

$M_i$  is the current P-CCPCH RSCP of the currently evaluated cell  $i$  expressed in mW

$O_i$  is the cell individual offset of the currently evaluated cell  $i$

$H_{1g}$  is the hysteresis parameter for the event 1g.

Equation 2

$$10 \cdot \text{Log}M_i + O_i + H_{1g} < 10 \cdot \text{Log}M_{\text{previous\_best}} + O_{\text{previous\_best}}$$

The variables in the formula are defined as follows:

$M_{\text{previous\_best}}$  is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{\text{previous\_best}}$  is the cell individual offset of the previous best cell

$M_i$  is the current P-CCPCH RSCP of the currently evaluated cell  $i$  expressed in mW

$O_i$  is the cell individual offset of the currently evaluated cell  $i$

$H_{I_g}$  is the hysteresis parameter for the event 1g.

**Figure 14.1.3.1-1: A P-CCPCH RSCP becomes better than the previous best P-CCPCH RSCP**

#### 14.1.3.2 Reporting event 1H: Timeslot ISCP below a certain threshold (TDD)

When an intra-frequency measurement configuring event 1h is set up, the UE shall:

- 1> create a variable TRIGGERED\_1H\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1h is configured in the UE, the UE shall:

- 1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED\_1H\_EVENT:
  - 2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED\_1H\_EVENT;
  - 2> send a measurement report with the IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1h" and in "cell measurement event results" the "Cell parameters ID" of the P-CCPCH that triggered the report;
    - 3> include in "Cell measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED\_1H\_EVENT and "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.
- 1> if Equation 2 below is fulfilled for a primary CCPCH:
  - 2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED\_1H\_EVENT:
    - 3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED\_1H\_EVENT.

The UE shall use the equations below for evaluation of reporting event 1h:

Equation 1

$$10 \cdot \text{Log}M_i + H_{1h} + O_i < T_{1h},$$

Equation 2

$$10 \cdot \text{Log}M_i - H_{1h} + O_i > T_{1h},$$

The variables in the formula are defined as follows:

$M_i$  is the Timeslot ISCP of the currently evaluated cell  $i$  expressed in mW

$O_i$  is the cell individual offset of the currently evaluated cell  $i$

$T_{1h}$  is the Threshold for event 1h

$H_{1h}$  is the hysteresis parameter for the event 1h.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

**Figure 14.1.3.2-1: An ISCP value of a timeslot drops below an absolute threshold**

#### 14.1.3.3 Reporting event 1i: Timeslot ISCP above a certain threshold (TDD)

When an intra-frequency measurement configuring event 1i is set up, the UE shall:

- 1> create a variable TRIGGERED\_1I\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 1i is configured in the UE, the UE shall:

- 1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED\_1I\_EVENT:
  - 2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED\_1I\_EVENT;
  - 2> send a measurement report with the IEs set as below:
    - 3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1i" and in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH that triggered the report;
    - 3> include in "measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED\_1I\_EVENT and "additional measured results" according to 8.4.2, not taking into account the cell individual offset for each cell.
- 1> if Equation 2 below is fulfilled for a primary CCPCH:
  - 2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED\_1I\_EVENT:
    - 3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED\_1I\_EVENT.

The UE shall use the equation below for evaluation of reporting event 1i:

Equation 1

$$10 \cdot \text{Log}M_i - H_{1i} + O_i > T_{1i},$$

Equation 2

$$10 \cdot \text{Log}M_i - H_{1i} + O_i < T_{1i},$$

The variables in the formula are defined as follows:

$M_i$  is the Timeslot ISCP of the currently evaluated cell  $i$  expressed in mW

$O_i$  is the cell individual offset of the currently evaluated cell  $i$

$T_{1i}$  is the Threshold for event 1i

$H_{1i}$  is the hysteresis parameter for the event 1i.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

Figure 14.1.3.3-1: An ISCP value of a timeslot exceeds a certain threshold

## 14.1.4 Event-triggered periodic intra-frequency measurement reports (informative)

### 14.1.4.1 Cell addition failure (FDD only)

**Figure 14.1.4.1-1: Periodic reporting triggered by event 1A**

When a cell enters the reporting range and triggers event 1A, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in an update of the active set. However, in some situations the UTRAN may be unable to add a strong cell to the active set typically due to capacity shortage for example.

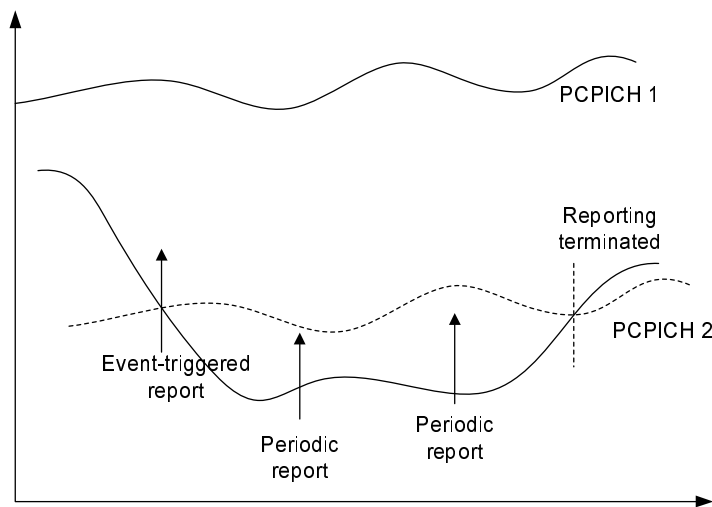

The UE shall continue reporting after the initial report by reverting to periodical measurement reporting if the reported cell is not added to the active set. This is illustrated in Figure 14.1.4.1-1. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the reporting range.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the reporting range; or
- 1> the UTRAN has added cells to the active set so that it includes the maximum number of cells (defined by the **reporting deactivation threshold** parameter), which are allowed for event 1A to be triggered; or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero event-triggered periodic measurement reporting shall not be applied.

## 14.1.4.1a Cell removal failure (FDD only)

**Figure 14.1.4.1a: Periodic reporting triggered by event 1B**

When a cell enters the removal range and triggers event 1B, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the removal of the weakest active cell. If the UTRAN is unable to receive MEASUREMENT REPORT after the maximum retransmission, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1a. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the removal range; or
- 1> the UTRAN has removed cells from the active set so that there are no longer the minimum amount of active cells for event 1B to be triggered; or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the "amount of reporting" parameter).

The reporting period is assigned by the UTRAN (with the "Reporting interval" parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

#### 14.1.4.2 Cell replacement failure (FDD only)

**Figure 14.1.4.1-2: Periodic reporting triggered by event 1C**

When a cell enters the replacement range and triggers event 1C, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the replacement of the weakest active cell. If the UTRAN is unable to replace the cell due to for example capacity shortage, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1-2. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the replacement range.

Event-triggered periodic measurement reporting shall be terminated if:

- 1> there are no longer any monitored cell(s) within the replacement range; or
- 1> the UTRAN has removed cells from the active set so that there are no longer the minimum amount of active cells for event 1C to be triggered (as defined by the **replacement activation threshold** parameter); or
- 1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

### 14.1.5 Mechanisms available for modifying intra-frequency measurement reporting behaviour (informative)

#### 14.1.5.1 Hysteresis

To limit the amount of event-triggered reports, a hysteresis parameter may be connected with each reporting event given above. The value of the hysteresis is given to the UE in the Reporting criteria field of the Measurement Control message.

In the example in Figure 14.1.5.1-1, the hysteresis ensures that the event 1D (FDD) or IG(TDD) (primary CPICH(FDD)/CCPCH(TDD) 2 becomes the best cell) is not reported until the difference is equal to the hysteresis value. The fact that primary CPICH(FDD)/CCPCH(TDD) 1 becomes best afterwards is not reported at all in the example since the primary CPICH(FDD)/CCPCH(TDD) 1 does not become sufficiently better than the primary CPICH(FDD)/CCPCH(TDD) 2.

**Figure 14.1.5.1-1: Hysteresis limits the amount of measurement reports**

### 14.1.5.2 Time-to-trigger

To limit the measurement signalling load, a time-to-trigger parameter could be connected with each reporting event given above. The value of the time-to-trigger is given to the UE in the Reporting criteria field of the Measurement Control message.

The effect of the time-to-trigger is that the report is triggered only after the conditions for the event have existed for the specified time-to-trigger. In the following FDD example in Figure 14.1.5.2-1, the use of time-to-trigger means that the event (primary CPICH 3 enters the reporting range) is not reported until it has been within the range for the time given by the time-to-trigger parameter.

**Figure 14.1.5.2-1: Time-to-trigger limits the amount of measurement reports**

In the following TDD example in Figure 14.1.5.2-2, the use of time-to-trigger means that the event (Timeslot ISCP upon certain threshold) is not reported until it has been upon the threshold for the time given by the time-to trigger parameter.

**Figure 14.1.5.2-2: Time-to-trigger limits the amount of measurement reports**

**NOTE:** The time-to-trigger could be combined with hysteresis, i.e. a hysteresis value is added to the measurement quantity before evaluating if the time-to-trigger timer should be started.

### 14.1.5.3 Cell individual offsets

For each cell that is monitored, an offset can be assigned with inband signalling. The offset can be either positive or negative. The offset is added to the measurement quantity before the UE evaluates if an event has occurred. The UE receives the cell individual offsets for each primary CPICH(FDD)/CCPCH(TDD) in the IE "Cell individual offset" included in the IE "Cell info" associated with each measurement object included in the MEASUREMENT CONTROL message.

For the FDD example, in Figure 14.1.5.3-1, since an offset is added to primary CPICH 3, it is the dotted curve that is used to evaluate if an event occurs. Hence, this means that measurement reports from UE to UTRAN are triggered when primary CPICH plus the corresponding offset, i.e. the dotted curve, leaves and enters the reporting range and when it gets better than primary CPICH 1 (if these events have been ordered by UTRAN). This offset mechanism provides the network with an efficient tool to change the reporting of an individual primary CPICH.

By applying a positive offset, as in Figure 14.1.5.3-1, the UE will send measurement reports as if the primary CPICH is offset  $x$  dB better than what it really is. This could be useful if the operator knows that a specific cell is interesting to monitor more carefully, even though it is not so good for the moment. In the example in Figure 14.1.5.3-1, the operator might know by experience that in this area primary CPICH 3 can become good very quickly (e.g. due to street corners) and therefore that it is worth reporting more intensively. Depending on the implemented handover evaluation algorithm, this may result in the cell with primary CPICH 3 being included in the active set earlier than would have been the case without the positive offset.

**Figure 14.1.5.3-1: A positive offset is applied to primary CPICH 3 before event evaluation in the UE**

For the TDD example, in Figure 14.1.5.3-2, an offset is added to primary CCPCH2, it is the dotted curve that is used to evaluate if the primary CCPCH2 becomes better than primary CCPCH1 (ordered by the UTRAN).

**Figure 14.1.5.3-2: A positive offset is applied to primary CCPCH 2**

Correspondingly, the operator can choose to apply a negative offset to a primary CCPCH. Then the reporting on that primary CCPCH is limited and the corresponding cell may be, at least temporarily excluded from the active set or as a target cell for handover.

It is important to note that the offset is added before triggering events, i.e. the offset is added by the UE before evaluating if a measurement report should be sent as opposed to offsets that are applied in the network and used for the actual handover evaluation. It should also be noted that the cell individual offset is not used in all measurement reporting events, and that it is not applied to all events in the same way.

#### 14.1.5.4 Forbid a Primary CPICH to affect the reporting range (FDD only)

The reporting range affects the reporting events 1A and 1B presented above. The reporting range is defined as a function of all the Primary CPICHs in the active set (see 14.1.2.1 and 14.1.2.2). If the parameter W is set to 0, the reporting range is defined relative to the best Primary CPICH. However, there could be cases where it is good to forbid a specific Primary CPICH to affect the reporting range. For example in Figure 14.1.5.4-1 the network has requested the UE to not let Primary CPICH 3 affect the reporting range. This mechanism could be effective if the operator knows by experience that the quality of Primary CPICH 3 is very unstable in a specific area and therefore should not affect the reporting of the other Primary CPICHs.

The UE shall ignore that a Primary CPICH is forbidden to affect the reporting range if all of the following conditions are fulfilled:

- the Primary CPICH is included in active set; and
- all cells in active set are defined as Primary CPICHs forbidden to affect the reporting range.

**Figure 14.1.5.4-1: Primary CPICH 3 is forbidden to affect the reporting range**

### 14.1.6 Report quantities in intra-frequency measurements

The quantities that the UE shall report to UTRAN when the event is triggered for an intra-frequency measurement are given by the IE "Intra-frequency reporting quantity" stored for this measurement and can be the following:

- 1 SFN-SFN observed time difference
- 2 Cell synchronisation information
- 3 Cell Identity
- 4 Downlink  $E_c/N_0$  (FDD).
- 5 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP.}$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP.}$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).
- 7 ISCP measured on Timeslot basis. (TDD)

## 8 Proposed TGSN (TDD)

A description of those values can be found in [7] and [8].

# 14.2 Inter-frequency measurements

## 14.2.0a Inter-frequency measurement quantities

The two first measurement quantities listed below are used by the UE to evaluate whether an inter-frequency measurement event has occurred or not, through the computation of a frequency quality estimate. The quantity to use to compute the frequency quality estimate for an inter-frequency measurement is given in the "Inter-frequency measurement quantity" stored for that measurement.

- 1 Downlink Ec/No (FDD)
- 2 Downlink received signal code power (RSCP) after despreading.
- 3 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP.}$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP.}$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

A description of those values can be found in [7] and [8].

## 14.2.0b Frequency quality estimate

### 14.2.0b.1 FDD cells

The frequency quality estimate used in events 2a, 2b 2c, 2d, 2e and 2f is defined as:

$$Q_{\text{frequency } j} = 10 \cdot \text{Log} M_{\text{frequency } j} = W_j \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_{A_j}} M_{i j} \right) + (1 - W_j) \cdot 10 \cdot \text{Log} M_{\text{Best } j},$$

The variables in the formula are defined as follows ("the virtual active set on frequency j" should be understood as the active set if frequency j is the used frequency. If frequency j is a non-used frequency, the way the virtual active set is initiated and updated is described in subclause 14.11):

$Q_{\text{frequency } j}$  is the estimated quality of the virtual active set on frequency j.

$M_{\text{frequency } j}$  is the estimated quality of the virtual active set on frequency j.

$M_{i j}$  is a measurement result of cell i in the virtual active set on frequency j.

$N_{A_j}$  is the number of cells in the virtual active set on frequency j.

$M_{\text{Best } j}$  is the measurement result of the cell in the virtual active set on frequency j with the highest measurement result.

$W_j$  is a parameter sent from UTRAN to UE and used for frequency  $j$ .

If the measurement result is CPICH-Ec/No then  $M_{Frequency}$ ,  $M_{ij}$  and  $M_{Best}$  are expressed as ratios.

If the measurement result is CPICH-RSCP or PCCPCH-RSCP then  $M_{Frequency}$ ,  $M_{ij}$  and  $M_{Best}$  are expressed in mW.

### 14.2.0b.2 TDD cells

$$Q_{i, frequency j} = 10 \cdot \text{Log} M_i + O_{i, j},$$

$Q_{i, frequency j}$  is the estimated quality of cell  $i$  on frequency  $j$ .

$M_i$  is the measurement result for Primary CCPCH RSCP of cell  $i$  on the primary frequency expressed in mW.

$O_{ij}$  is the cell individual offset of the currently evaluated cell  $i$  on frequency  $j$ .  $O_{ij}$  is set by IE "Cell individual offset"

### 14.2.0c Inter-frequency reporting quantities

The quantities that the UE shall report for each cell to UTRAN when the event is triggered for an inter-frequency measurement is given by the "Inter-frequency reporting quantity" IE stored for this measurement and can be the following, from 1 to 8. The quantity number 9 can be reported for each frequency that triggered the report.

- 1 Cell identity
- 2 SFN-SFN observed time difference
- 3 Cell synchronisation information
- 4 Downlink Ec/No (FDD)
- 5 Downlink path loss.

For FDD:

$$\text{Pathloss in dB} = \text{Primary CPICH Tx power} - \text{CPICH RSCP.}$$

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

$$\text{Pathloss in dB} = \text{Primary CCPCH TX power} - \text{Primary CCPCH RSCP.}$$

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.

Results higher than 158 shall be reported as 158.

Results lower than 46 shall be reported as 46.

- 6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).
- 7 ISCP measured on Timeslot basis. (TDD)
- 8 Proposed TGSN (TDD)
- 9 UTRA carrier RSSI

A description of those values can be found in [7] and [8].

## 14.2.1 Inter-frequency reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are evaluated with respect to one of the measurement quantities given in subclause 14.2.0a. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. A "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection. An exception to the definition of used and non-used frequency is the frequency of the secondary serving HS-DSCH cell which shall be treated as a non-used frequency for measurement purposes.

The "monitored set on non-used frequency" consists of cells in "cells for measurement" (or all cells in CELL\_INFO\_LIST if "cells for measurement" is not present) that are not part of the virtual active set on that non-used frequency.

When one inter-frequency measurement identity corresponds to multiple inter-frequency events with identical event identities, the UE behaviour is not specified.

### 14.2.1.1 Event 2a: Change of best frequency.

When event 2a is configured in the UE within a measurement, the UE shall:

- 1> when the measurement is initiated or resumed:
  - 2> store the used frequency in the variable BEST\_FREQUENCY\_2A\_EVENT.
- 1> if equation 1 below has been fulfilled for a time period indicated by "Time to trigger" for a frequency included for that event and which is not stored in the variable BEST\_FREQUENCY\_2A\_EVENT:
  - 2> send a measurement report with IEs set as below:
    - 3> set in "inter-frequency measurement event results":
      - 4> "inter-frequency event identity" to "2a"; and
      - 4> "Frequency info" to the frequency that triggered the event; and
      - 4> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cells parameters ID" of the best primary CCPCH for TDD cells on that frequency, not taking into account the cell individual offset.
    - 3> if a non-used frequency triggered the measurement report:
      - 4> include in IE "Inter-frequency measured results list" the measured results for the non-used frequency that triggered the event, not taking into account the cell individual offset.
    - 3> if the used frequency triggered the measurement report:
      - 4> do not include the IE "Inter-frequency measured results list" in the measurement report.
    - 3> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset;
  - 2> update the variable BEST\_FREQUENCY\_2A\_EVENT with that frequency.

Equation 1:

$$Q_{NotBest} \geq Q_{Best} + H_{2a} / 2$$

The variables in the formula are defined as follows:

$Q_{Not\ Best}$  is the quality estimate of a frequency not stored the "best frequency" in the variable BEST\_FREQUENCY\_2A\_EVENT.

$Q_{Best}$  is the quality estimate of the frequency stored in "best frequency" in the variable BEST\_FREQUENCY\_2A\_EVENT.

$H_{2a}$  is the hysteresis parameter for the event 2a in that measurement.

#### 14.2.1.2 Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

When an inter-frequency measurement configuring event 2b is set up, the UE shall:

- 1> create a variable TRIGGERED\_2B\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 2b is configured in the UE within a measurement, the UE shall:

- 1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:
  - 2> if any of those non-used frequency is not stored in the variable TRIGGERED\_2B\_EVENT:
    - 3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED\_2B\_EVENT into that variable;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "inter-frequency measurement event results":
        - 5> "inter-frequency event identity" to "2b"; and
        - 5> for each non-used frequency that triggered the event, beginning with the best frequency:
          - 6> "Frequency info" to that non-used frequency; and
          - 6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.
      - 4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;
      - 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
  - 1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED\_2B\_EVENT:
    - 2> remove that non-used frequency from the variable TRIGGERED\_2B\_EVENT.
  - 1> if equation 4 below is fulfilled for the used frequency:
    - 2> clear the variable TRIGGERED\_2B\_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$  is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2b}$  is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$  is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used\ 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used\ 2b}$  is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$  is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Nonused} < T_{Nonused\ 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$  is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED\_2B\_EVENT.

$T_{Non\ used\ 2b}$  is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2b}$  is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used\ 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used\ 2b}$  is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$  is the hysteresis parameter for the event 2b.

#### 14.2.1.3 Event 2c: The estimated quality of a non-used frequency is above a certain threshold

When an inter-frequency measurement configuring event 2c is set up, the UE shall:

- 1> create a variable TRIGGERED\_2C\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 2c is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":
  - 2> if any of those non-used frequencies is not stored in the variable TRIGGERED\_2C\_EVENT:
    - 3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED\_2C\_EVENT into that variable;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "inter-frequency measurement event results":
        - 5> "inter-frequency event identity" to "2c"; and

- 5> for each non-used frequency that triggered the event, beginning with the best frequency:
    - 6> "Frequency info" to that non-used frequency; and
    - 6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.
  - 4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;
  - 4> set the IE "additional measured results" according to subclause 8.4.2 not taking into account the cell individual offset.
- 1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED\_2C\_EVENT:
    - 2> remove that non-used frequency from the variable TRIGGERED\_2C\_EVENT.

Triggering condition:

Equation 1:

$$Q_{Non\ used} \geq T_{Non\ used\ 2c} + H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$  is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2c}$  is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$  is the hysteresis parameter for the event 2c.

Leaving triggered state condition:

Equation 2:

$$Q_{Non\ used} < T_{Non\ used\ 2c} - H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$  is the quality estimate of a non-used frequency stored in the variable TRIGGERED\_2C\_EVENT.

$T_{Non\ used\ 2c}$  is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$  is the hysteresis parameter for the event 2c.

#### 14.2.1.4 Event 2d: The estimated quality of the currently used frequency is below a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2d is set up, the UE shall:

- 1> create a variable TRIGGERED\_2D\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When event 2d is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":
  - 2> if the variable TRIGGERED\_2D\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_2D\_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2d" and no IE "Inter-frequency cells", not taking into account the cell individual offset;

4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the variable TRIGGERED\_2D\_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED\_2D\_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \leq T_{Used2d} - H_{2d}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used2d}$  is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$  is the hysteresis parameter for the event 2d.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} > T_{Used2d} + H_{2d}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used2d}$  is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$  is the hysteresis parameter for the event 2d.

#### 14.2.1.5 Event 2e: The estimated quality of a non-used frequency is below a certain threshold

When an inter-frequency measurement configuring event 2e is set up, the UE shall:

1> create a variable TRIGGERED\_2E\_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2e is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":

2> if any of those non-used frequencies is not stored in the variable TRIGGERED\_2E\_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED\_2E\_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

- 5> "inter-frequency event identity" to "2e"; and
- 5> for each non-used frequency that triggered the event, beginning with the best frequency:
  - 6> "Frequency info" to that non-used frequency; and
  - 6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.
- 4> include in the IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;
- 4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
- 1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED\_2E\_EVENT:
  - 2> remove that non-used frequency from the variable TRIGGERED\_2E\_EVENT.

Triggering condition:

Equation 1:

$$Q_{Nonused} \leq T_{Nonused2e} - H_{2e} / 2$$

The variables in the formula are defined as follows:

$Q_{Non used}$  is the quality estimate of a non-used frequency that becomes worse than an absolute threshold.

$T_{Non used 2e}$  is the absolute threshold that applies for that non-used frequency for that event.

$H_{2e}$  is the hysteresis parameter for the event 2e.

Leaving triggered state condition:

Equation 2:

$$Q_{Nonused} > T_{Nonused2e} + H_{2e} / 2$$

The variables in the formula are defined as follows:

$Q_{Non used}$  is the quality estimate of a non-used frequency stored in the variable TRIGGERED\_2E\_EVENT.

$T_{Non used 2e}$  is the absolute threshold that applies for that non-used frequency for that event.

$H_{2e}$  is the hysteresis parameter for the event 2e.

#### 14.2.1.6 Event 2 f: The estimated quality of the currently used frequency is above a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2f is set up, the UE shall:

- 1> create a variable TRIGGERED\_2F\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When event 2f is configured in the UE within a measurement, the UE shall:

- 1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":
  - 2> if the variable TRIGGERED\_2F\_EVENT is set to FALSE:

3> set the variable TRIGGERED\_2F\_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2f", and no IE "Inter-frequency cells";

4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the variable TRIGGERED\_2F\_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED\_2F\_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \geq T_{Used2f} + H_{2f}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used2f}$  is the absolute threshold that applies for the used frequency and event 2f.

$H_{2f}$  is the hysteresis parameter for the event 2f.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} < T_{Used2f} - H_{2f}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used frequency.

$T_{Used2f}$  is the absolute threshold that applies for the used frequency and event 2f.

$H_{2f}$  is the hysteresis parameter for the event 2f.

## 14.3 Inter-RAT measurements

### 14.3.0a Inter-RAT measurement quantities

A measurement quantity is used by the UE to evaluate whether an inter-RAT measurement event has occurred or not.

The measurement quantity for UTRAN is used to compute the frequency quality estimate for the active set, as described in the next subclause, and can be:

- 1 Downlink Ec/No.
- 2 Downlink received signal code power (RSCP) after despreading.

The measurement quantity for GSM can be:

- 1 GSM Carrier RSSI

The measurement quantity for E-UTRA can be:

- 1 E-UTRA RSRP

## 2 E-UTRA RSRQ

A description of those values can be found in [7] and [8].

### 14.3.0b Frequency quality estimate of the UTRAN frequency

The estimated quality of the active set in UTRAN in event 3a is defined as:

$$Q_{UTRAN} = 10 \cdot \text{Log} M_{UTRAN} = W \cdot 10 \cdot \text{Log} \left( \sum_{i=1}^{N_A} M_i \right) + (1 - W) \cdot 10 \cdot \text{Log} M_{Best},$$

The variables in the formula are defined as follows:

$Q_{UTRAN}$  is the estimated quality of the active set on the currently used UTRAN frequency.

$M_{UTRAN}$  is the estimated quality of the active set on currently used UTRAN frequency expressed in another unit.

$M_i$  is the measurement result of cell  $i$  in the active set, according to what is indicated in the IE "Measurement quantity for UTRAN quality estimate".

$N_A$  is the number of cells in the active set.

$M_{Best}$  is the measurement result of the cell in the active set with the highest measurement result.

$W$  is a parameter sent from UTRAN to UE.

If the measurement result is CPICH-Ec/No  $M_{UTRAN}$ ,  $M_i$  and  $M_{Best}$  are expressed as ratios.

If the measurement result is CPICH-RSCP or PCCPCH-RSCP,  $M_{UTRAN}$ ,  $M_i$  and  $M_{Best}$  are expressed in mW.

### 14.3.0c Inter-RAT reporting quantities

The quantities that the UE shall report to UTRAN when the event is triggered for an inter-RAT measurement are given by the IE "Inter-RAT reporting quantity" stored for that measurement, and can be the following:

In the case the other RAT is GSM:

- 1 GSM carrier RSSI

In the case the other RAT is E-UTRA:

- 1 Measurement Quantity: In case the measurement quantity is RSRP then only RSRP is reported; in case the measurement quantity is RSRQ then only RSRQ is reported.
- 2 Both: both RSRP and RSRQ are reported.

A description of those values can be found in [7], [8] and [74].

### 14.3.1 Inter-RAT reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message the UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are measured with respect to one of the measurement quantities given in subclause 14.3.0a, and of the frequency quality estimate given in subclause 14.3.0b. For UTRAN the measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. For other RATs the measurement quantities are system-specific. A "used UTRAN frequency" is a frequency that the UE have been ordered to measure upon and is also currently used for the connection to UTRAN. "Other system" is e.g. GSM or E-UTRA.

In the text below describing the events:

- "The BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement" shall be understood as the BCCH ARFCN and BSIC combinations of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL\_INFO LIST.
- "The BCCH ARFCNs considered in that inter-RAT measurement" shall be understood as the BCCH ARFCNs of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL\_INFO LIST.
- "The E-UTRA frequencies considered in that inter-RAT measurement" shall be understood as the E-UTRA frequencies whose EARFCNs is included in the the variable EUTRA\_FREQUENCY\_INFO LIST.

When one inter-RAT measurement identity corresponds to multiple inter-RAT events with identical event identities, the UE behaviour is not specified.

#### 14.3.1.1 Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

When an inter-RAT measurement configuring event 3a is set up, the UE shall:

- 1> create a variable TRIGGERED\_3A\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3a is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
  - 2> if equations 1 and 2 below have both been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
    - 3> if the Inter-RAT cell id of any of those GSM cells is not stored in the variable TRIGGERED\_3A\_EVENT:
      - 4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3A\_EVENT into that variable.
      - 4> send a measurement report with IEs set as below:
        - 5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
        - 5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
    - 2> if equation 4 is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED\_3A\_EVENT:
      - 3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED\_3A\_EVENT.
  - 2> if equation 3 is fulfilled for the used frequency in UTRAN:
    - 3> clear the variable TRIGGERED\_3A\_EVENT.
- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
  - 2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several BCCH ARFCNs considered in that inter-RAT measurement:
    - 3> if any of those BCCH ARFCNs is not stored into the variable TRIGGERED\_3A\_EVENT:

- 4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED\_3A\_EVENT into that variable;
- 4> send a measurement report with IEs set as below:
  - 5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
  - 5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
- 2> if equation 4 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED\_3A\_EVENT:
  - 3> remove that BCCH ARFCN from the variable TRIGGERED\_3A\_EVENT.
- 2> if equation 3 is fulfilled for the used frequency in UTRAN:
  - 3> clear the variable TRIGGERED\_3A\_EVENT.
- 1> if the other RAT is E-UTRA:
  - 2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:
    - 3> if any of those E-UTRA cells are not stored into the variable TRIGGERED\_3A\_EVENT:
      - 4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3A\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> in "E-UTRA event results": "inter-RAT event identity" to "3a", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);
        - 5> "E-UTRA measured results" according to subclause 8.6.7.5.
  - 2> if equation 4 is fulfilled for a cell that is stored in the variable TRIGGERED\_3A\_EVENT:
    - 3> remove that cell from the variable TRIGGERED\_3A\_EVENT.
  - 2> if equation 3 is fulfilled for the used frequency in UTRAN:
    - 3> clear the variable TRIGGERED\_3A\_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Used} \leq T_{Used} - H_{3a} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used UTRAN frequency.

$T_{Used}$  is the absolute threshold that applies for the used frequency in that measurement.

$H_{3a}$  is the hysteresis parameter for event 3a.

Equation 2:

$$M_{Other RAT} + CIQ_{Other RAT} \geq T_{Other RAT} + H_{3a} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$  is the hysteresis parameter for event 3a.

Leaving triggered state conditions:

Equation 3:

$$Q_{Used} > T_{Used} + H_{3a} / 2$$

The variables in the formula are defined as follows:

$Q_{Used}$  is the quality estimate of the used UTRAN frequency.

$T_{Used}$  is the absolute threshold that applies for the used frequency in that measurement.

$H_{3a}$  is the hysteresis parameter for event 3a.

Equation 4:

$$M_{Other\ RAT} + CIO_{Other\ RAT} < T_{Other\ RAT} - H_{3a} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.  $M_{Other\ RAT}$  is expressed in dBm.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$  is the hysteresis parameter for event 3a.

#### 14.3.1.2 Event 3b: The estimated quality of other system is below a certain threshold

When an inter-RAT measurement configuring event 3b is set up, the UE shall:

- 1> create a variable TRIGGERED\_3B\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3b is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
    - 3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED\_3B\_EVENT:
      - 4> store the inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3B\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;
        - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

- 2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED\_3B\_EVENT:
  - 3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED\_3B\_EVENT.
- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:
    - 3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED\_3B\_EVENT:
      - 4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED\_3B\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;
        - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
    - 2> if equation 2 below is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED\_3B\_EVENT:
      - 3> remove that BCCH ARFCN from the variable TRIGGERED\_3B\_EVENT.
- 1> if the other RAT is E-UTRA:
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:
    - 3> if any of those E-UTRA cells is not stored into the variable TRIGGERED\_3B\_EVENT:
      - 4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3B\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "E-UTRA event results": "inter-RAT event identity" to "3b", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (worst one first);
        - 5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.
    - 2> if equation 2 below is fulfilled for a cell that is stored in the variable TRIGGERED\_3B\_EVENT:
      - 3> remove that cell from the variable TRIGGERED\_3B\_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT} + CIO_{Other\ RAT} \leq T_{Other\ RAT} - H_{3b} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3b}$  is the hysteresis parameter for event 3b.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT} + CIO_{Other\ RAT} > T_{Other\ RAT} + H_{3b} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.  $M_{Other\ RAT}$  is expressed in dBm.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3b}$  is the hysteresis parameter for event 3b.

### 14.3.1.3 Event 3c: The estimated quality of other system is above a certain threshold

When an inter-RAT measurement configuring event 3c is set up, the UE shall:

- 1> create a variable TRIGGERED\_3C\_EVENT related to that measurement, which shall initially be empty;
- 1> delete this variable when the measurement is released.

When event 3c is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
    - 3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED\_3C\_EVENT:
      - 4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3C\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;
        - 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
    - 2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED\_3C\_EVENT:
      - 3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED\_3C\_EVENT.
- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:
    - 3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED\_3C\_EVENT:
      - 4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED\_3C\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

- 5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
- 2> if equation 2 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED\_3C\_EVENT:
  - 3> remove that BCCH ARFCN from the variable TRIGGERED\_3C\_EVENT.
- 1> if the other RAT is E-UTRA:
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:
    - 3> if any of those E-UTRA cells is not stored into the variable TRIGGERED\_3C\_EVENT:
      - 4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED\_3C\_EVENT into that variable;
      - 4> send a measurement report with IEs set as below:
        - 5> set in "E-UTRA event results": "inter-RAT event identity" to "3c", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);
        - 5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.
  - 2> if equation 2 is fulfilled for a cell that is stored in the variable TRIGGERED\_3C\_EVENT:
    - 3> remove that cell from the variable TRIGGERED\_3C\_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT} + CIO_{Other\ RAT} \geq T_{Other\ RAT} + H_{3c} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.  $M_{Other\ RAT}$  is expressed in dBm.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3c}$  is the hysteresis parameter for event 3c.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT} + CIO_{Other\ RAT} < T_{Other\ RAT} - H_{3c} / 2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$  is the measurement quantity for the cell of the other system.  $M_{Other\ RAT}$  is expressed in dBm.

$CIO_{Other\ RAT}$  is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$  is the absolute threshold that applies for the other system in that measurement.

$H_{3c}$  is the hysteresis parameter for event 3c.

#### 14.3.1.4 Event 3d: Change of best cell in other system

When an inter-RAT measurement configuring event 3d is set up, the UE shall:

- 1> create a variable BEST\_CELL\_3D\_EVENT related to that measurement;
- 1> delete this variable when the measurement is released.

When event 3d is configured in the UE within a measurement, the UE shall:

- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":
  - 2> when the measurement is initiated or resumed:
    - 3> store in the variable BEST\_CELL\_3D\_EVENT the Inter-RAT cell id of the GSM cell that has the best measured quantity among the GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement, not taking into account the cell individual offset of the GSM cells;
    - 3> send a measurement report with IE set as below:
      - 4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell that is stored in the variable BEST\_CELL\_3D\_EVENT;
      - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
  - 2> if equation 1 has been fulfilled for a time period indicated by "time to trigger" for a GSM cell that is different from the one stored in BEST\_CELL\_3D\_EVENT and that matches any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:
    - 3> store the Inter-RAT cell id of that GSM cell in the variable BEST\_CELL\_3D\_EVENT;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell is now stored in BEST\_CELL\_3D\_EVENT;
      - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
- 1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":
  - 2> when the measurement is initiated or resumed:
    - 3> store in the variable BEST\_CELL\_3D\_EVENT the BCCH ARFCN of the GSM cell that has the best measured quantity among the BCCH ARFCNs considered in that inter-RAT measurement;
    - 3> send a measurement report with IE set as below:
      - 4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCH ARFCN that is stored in the variable BEST\_CELL\_3D\_EVENT;
      - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.
  - 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one of the BCCH ARFCNs considered in that inter-RAT measurement and different from the one stored in BEST\_CELL\_3D\_EVENT:
    - 3> store the BCCH ARFCN of that GSM cell in the variable BEST\_CELL\_3D\_EVENT;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCCH ARFCN that is now stored in the variable BEST\_CELL\_3D\_EVENT;

- 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.
- 1> if the other RAT is E-UTRA:
- 2> when the measurement is initiated or resumed:
- 3> store in the variable BEST\_CELL\_3D\_EVENT the EARFCN and Physical Cell Identity of the E-UTRA cell that has the best measured quantity among the EARFCNs considered in that inter-RAT measurement;
- 3> send a measurement report with IE set as below:
- 4> set in "E-UTRA measurement results": "inter-RAT event identity" to "3d", and "E-UTRA Carrier Frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are stored in the variable BEST\_CELL\_3D\_EVENT;
- 4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.
- 2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for a cell on one of the EARFCNs considered in that inter-RAT measurement and different from the cell stored in BEST\_CELL\_3D\_EVENT:
- 3> store the EARFCN and Physical Cell Identity of that E-UTRA cell in the variable BEST\_CELL\_3D\_EVENT;
- 3> send a measurement report with IEs set as below:
- 4> set in "E-UTRA event results": "inter-RAT event identity" to "3d", and "E-UTRA carrier frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are now stored in the variable BEST\_CELL\_3D\_EVENT;
- 4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

Equation 1:

$$M_{New} \geq M_{Best} + H_{3d} / 2$$

The variables in the formula are defined as follows:

$M_{New}$  is the measurement quantity for a cell of the other system that is not stored in the variable BEST\_CELL\_3D\_EVENT.

$M_{Best}$  is the measurement quantity for a cell of the other system that is stored in the variable BEST\_CELL\_3D\_EVENT.

$H_{3d}$  is the hysteresis parameter for event 3d.

## 14.3.2 GSM measurements in compressed mode

### 14.3.2.1 GSM RSSI measurements

The UE shall perform GSM RSSI measurements in the gaps of compressed mode pattern sequence specified for GSM RSSI measurement purpose.

### 14.3.2.2 Initial BSIC identification

The UE shall perform Initial BSIC identification in compressed mode pattern sequence specified for Initial BSIC identification measurement purpose.

The parameter "N identify abort" in the IE "DPCH compressed mode info" indicates the maximum number of patterns that the UE shall use to attempt to decode the unknown BSIC of the GSM cell in the initial BSIC identification procedure.

The BSIC identification procedure is defined in detail in [19].

### 14.3.2.3 BSIC re-confirmation

The UE shall perform BSIC re-confirmation in compressed mode pattern sequence specified for BSIC re-confirmation measurement purpose.

The parameter "T reconfirm abort" in the IE "DPCH compressed mode info" indicates the maximum time allowed for the re-confirmation of the BSIC of one GSM cell in the BSIC re-confirmation procedure.

The BSIC re-confirmation procedure is defined in detail in [19].

## 14.3.3 E-UTRA measurements in compressed mode

### 14.3.3.1 E-UTRA RSRP measurements

The UE shall perform E-UTRA RSRP measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

### 14.3.3.2 E-UTRA RSRQ measurements

The UE shall perform E-UTRA RSRQ measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

## 14.4 Traffic Volume Measurements

### 14.4.1 Traffic Volume Measurement Quantity

Traffic volume measurements may be configured by RRC to assist with dynamic radio bearer control. The reported quantities that can be configured are:

- 1 Buffer Occupancy.
- 2 Average of Buffer Occupancy.
- 3 Variance of Buffer Occupancy.

A description of these values can be found in [15].

When a report is triggered, the UE shall provide the requested quantities for the acknowledged and unacknowledged mode RBs mapped onto the transport channels identified.

When the RLC buffer payload, Average of RLC buffer payload or Variance of RLC buffer payload is reported, the measured quantity shall be rounded upwards to the closest higher value possible to report. When the measured quantity is over the highest value possible to report, it shall be set to the highest value.

### 14.4.2 Traffic Volume reporting triggers

Traffic volume measurement reports can be triggered using two different mechanisms, periodical and event triggered. The reporting criteria are specified in the measurement control message.

All the specified events are evaluated with respect to the Transport Channel Traffic Volume (TCTV). This quantity is equal to the sum of the Buffer Occupancy for all logical channels mapped onto a transport channel. The events on a given transport channel shall be evaluated at least at every TTI (may be more often) as described in [15].

When one traffic volume measurement identity corresponds to multiple traffic volume events with identical event identities for the same transport channel, the UE behaviour is not specified.

When a traffic volume measurement is set up, the UE shall:

- 1> for FDD, if variable READY\_FOR\_COMMON\_EDCH is set to TRUE:

- 2> if one transport channel that is referenced in the IE "Traffic volume measurement object" as "DCH" and IE "measurement validity" is set to "all states except CELL\_DCH":
  - 3> the uplink transport channel on which the UE is supposed to report in CELL\_FACH state is of type E-DCH.
- 1> for 1.28 Mcps TDD, if one transport channel that is referenced in the IE "Traffic volume measurement object" as "USCH" and the IE "UL target transport channel id" is set to 32 and and IE "measurement validity" is set to "all states" or "all states except CELL\_DCH":
  - 2> the uplink transport channel on which the UE is supposed to report is of type E-DCH.
- 1> if the IE "report criteria" is set to "Traffic volume measurement reporting criteria":
  - 2> for each IE "Parameters sent for each transport channel":
    - 3> if the IE "Uplink transport channel type" is not included; or
    - 3> if the IE "Uplink Transport Channel Type" has the value "DCH" or "USCH" and the IE "UL transport channel id" is not included:
      - 4> for each IE "Parameters required for each Event":
        - 5> for each uplink transport channel on which the UE is supposed to report (see below):
          - 6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".
    - 3> else:
      - 4> for each IE "Parameters required for each Event":
        - 5> for the uplink transport channel defined by the IEs "Uplink transport channel type" and "UL transport channel id":
          - 6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".
- 1> else:
  - 2> if the IE "report criteria" is set to "Periodical reporting criteria":
    - 2> configure periodical triggers with period equal to the value in the IE "Reporting Interval" and with number of transmissions equal to the value in the IE "Amount of reporting" for the measurement identified by the IE "Measurement Identity".

For each transport channel for which an event trigger has been configured, the UE shall:

- 1> for each event configured for this transport channel:
  - 2> if the TCTV is larger than the threshold in IE "Reporting threshold" at TVM setup or modify; or
  - 2> if the TCTV becomes larger than the threshold in IE "Reporting threshold" while the event is configured:
    - 3> if the IE "Traffic volume event identity" has value "4a":
      - 4> if the IE "Time to trigger" is not present; and
      - 4> if the Pending-time-after-trigger timer for this event is not active:
        - 5> if the IE "Pending time after trigger" is included:
          - 6> start the Pending-time-after-trigger timer for this event with the value in this IE.
    - 5> trigger a report for the measurement identified by the IE "Measurement Identity".

- 4> else:
  - 5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".
- 3> if the IE "Traffic volume event identity" has value "4b":
  - 4> if the Time-to-trigger timer for this event is active:
    - 5> stop this timer.
- 2> if the TCTV is smaller than the threshold in IE "Reporting threshold" at TVM setup or modify; or
- 2> if the TCTV becomes smaller than the threshold in IE "Reporting threshold" while the event is configured:
  - 3> if the IE "Traffic volume event identity" has value "4a":
    - 4> if the Time-to-trigger timer for this event is active:
      - 5> stop this timer.
  - 3> if the IE "Traffic volume event identity" has value "4b":
    - 4> if the IE "Time to trigger" is not present; and
    - 4> if the Pending-time-after-trigger timer for this event is not active:
      - 5> if the IE "Pending time after trigger" is included:
        - 6> start the Pending-time-after-trigger timer for this event with the value in this IE.
      - 5> trigger a report for the measurement identified by the IE "Measurement Identity".
  - 4> else:
    - 5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When the Time-to-trigger timer for an event elapses:

- 1> if the Pending-time-after-trigger timer for this event is not active:
  - 2> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;
- 2> if the IE "Pending time after trigger" is included:
  - 3> start the Pending-time-after-trigger timer for this event with the value in this IE.

When the Pending-time-after-trigger for an event elapses:

- 1> if the IE "Traffic volume event identity" has value "4a":
  - 2> if the TCTV is larger than the threshold in IE "Reporting threshold":
    - 3> if the IE "Time to trigger" is not present:
      - 4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;
      - 4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".
  - 3> else:
    - 4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".
- 1> if the IE "Traffic volume event identity" has value "4b":
  - 2> if the TCTV is smaller than the threshold in IE "Reporting threshold":
    - 3> if the IE "Time to trigger" is not present:

- 4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;
  - 4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".
- 3> else:
- 4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When a periodical trigger elapses, the UE shall:

- 1> trigger a report for the measurement identified by the IE "Measurement Identity";
- 1> if the number of reports triggered by this periodical trigger reaches the value in the IE "Amount of reporting":
  - 2> disable this periodical trigger.

When a report is triggered for a given IE "Measurement Identity", the UE shall:

- 1> consider the variable MEASUREMENT\_IDENTITY corresponding to this measurement identity;
- 1> if the report is triggered by an event trigger:
  - 2> include the IE "Event results";
  - 2> if variable READY\_FOR\_COMMON\_EDCH is set to FALSE:
    - 3> set the IE "Uplink transport channel type causing the event" to the type of the transport channel which triggered the report;
    - 3> if the transport channel type is "DCH" or "USCH":
      - 4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.
    - 3> else:
      - 4> not include the IE "UL Transport Channel identity".
  - 2> else:
    - 3> for FDD:
      - 4> set the IE "Uplink transport channel type causing the event" to the value "DCH";
      - 4> include the IE "UL Transport Channel identity" and set it to any value.
    - 3> for 1.28 Mcps TDD:
      - 4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.
  - 2> set the IE "Traffic volume event identity" to the identity of the event that triggered the report;
  - 2> if the IE "Tx interruption after trigger" for the event that triggered the report is included:
    - 3> if the UE is in CELL\_FACH state and
    - 3> if the variable READY\_FOR\_COMMON\_EDCH is set to FALSE:
      - 4> prohibit DTCH transmissions on the RACH;
      - 4> if the Tx interruption timer is not running; or
      - 4> if the Tx interruption timer is running and still has a value larger than the IE "Tx interruption after trigger" for the event, i.e. it was started earlier by another event with a larger value in IE "Tx interruption after trigger":

- 5> start the Tx interruption timer with the value in the IE "Tx interruption after trigger" for this event.
- 4> when it receives from the UTRAN a message causing the transition to CELL\_DCH state; or
- 4> when the Tx interruption timer elapses:
  - 5> stop the timer;
  - 5> resume these transmissions.
- 1> if the IE "Traffic volume measurement object" is not included:
  - 2> report on all the uplink transport channels as specified below.
- 1> if the IE "Traffic volume measurement object" is included:
  - 2> report on the uplink transport channels identified in this IE as specified below.
- 1> for each UM or AM RB mapped onto a transport channel on which the UE is expected to report:
  - 2> add an element in the IE "Traffic volume measurement results";
  - 2> set the value of the IE "RB Identity" to the identity of the considered radio bearer;
  - 2> if the RB is mapped onto one logical channel:
    - 3> if the IE "RLC Buffer Payload for each RB" is set to TRUE:
      - 4> include the IE "RLC Buffers Payload" and set it to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.
    - 3> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
      - 4> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
    - 3> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
      - 4> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
  - 2> if the RB is mapped onto two logical channels:
    - 3> if one logical channel is mapped onto transport channels on which the UE is supposed to report:
      - 4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:
        - 5> include and set the IE "RLC Buffers Payload" to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.
      - 4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
        - 5> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
      - 4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
        - 5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.
    - 3> if both logical channels are mapped onto transport channels on which the UE is supposed to report:
      - 4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:

- 5> include and set the IE "RLC Buffers Payload" to the sum of the Buffer Occupancy values for the two logical channels, rounded up to the next allowed value.
- 4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:
  - 5> include and set the IE "Average of RLC Buffer Payload" to the sum of the Buffer Occupancy for the two logical channels averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.
- 4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:
  - 5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the sum of the Buffer Occupancy for the two logical channels, computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.

#### 14.4.2.1 Reporting event 4 A: Transport Channel Traffic Volume becomes larger than an absolute threshold

**Figure 14.4.2.1-1: Event triggered report when Transport Channel Traffic Volume becomes larger than a certain threshold**

If the monitored Transport Channel Traffic Volume (TCTV) [15] is larger than an absolute threshold at TVM setup or modify, or is larger at activation of the monitored transport channel, or becomes larger than an absolute threshold while the event is configured i.e. if  $TCTV > \text{Reporting threshold}$ , this event could trigger a report. The event could be triggered again only if  $TCTV < \text{Reporting threshold}$  and later  $TCTV > \text{Reporting threshold}$  is verified again.

#### 14.4.2.2 Reporting event 4 B: Transport Channel Traffic Volume becomes smaller than an absolute threshold

**Figure 14.4.2-1-2: Event triggered report when Transport Channel Traffic Volume becomes smaller than certain threshold**

If the monitored Transport Channel Traffic Volume (TCTV) [15] is smaller than an absolute threshold at TVM setup or modify, or is smaller at activation of the monitored transport channel, or becomes smaller than an absolute threshold while the event is configured i.e. if  $TCTV < \text{Reporting threshold}$ , this event could trigger a report. The event could be triggered again only if TCTV becomes bigger than the Reporting threshold and later  $TCTV < \text{Reporting threshold}$  is verified again.

### 14.4.3 Traffic volume reporting mechanisms

Traffic volume measurement triggering could be associated with both a *time-to-trigger* and a *pending time after trigger*. The time-to-trigger is used to get time domain hysteresis, i.e. the condition must be fulfilled during the time-to-trigger time before a report is sent. Pending time after trigger is used to limit consecutive reports when one traffic volume measurement report already has been sent and enables periodic reporting while the TCTV remains above(4a) or below(4b) the threshold. This is described in detail below.

#### 14.4.3.1 Pending time after trigger

This timer is started in the UE when a measurement report has been triggered by a given event. The UE is then forbidden to send new measurement reports triggered by the same event during this time period. Instead the UE waits until the timer has expired. If the Transport Channel Traffic Volume [15] is still above the threshold for event 4a, or below the threshold for event 4b when the timer expires, the UE sends a new measurement report, and the timer is restarted. Otherwise it waits for a new triggering.

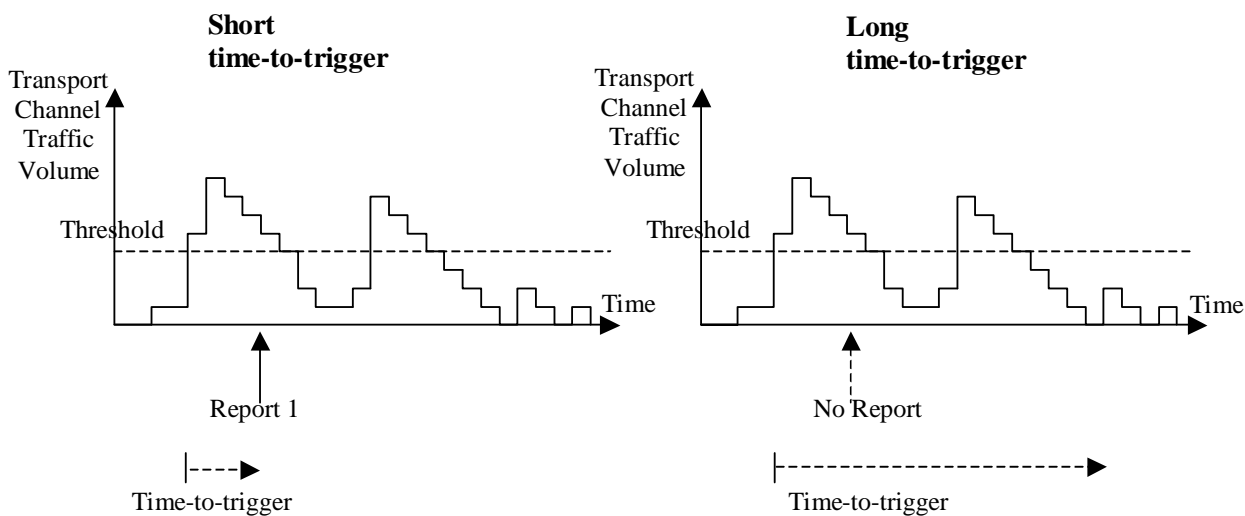

**Figure 14.4.3.1-1: Pending time after trigger limits the amount of consecutive measurement reports**

Figure 14.4.3.1-1 shows that by increasing the pending time after trigger a triggered second event does not result in a measurement report. The figure assumes absence of the IE "Time to trigger".

### 14.4.3.2 Time-to-trigger

The timer is started in the UE when the Transport Channel Traffic Volume triggers the event. If the TCTV crosses the threshold before the timer expires, the timer is stopped. If the timer expires then a report is triggered.

**Figure 14.4.3.1-2: Time-to-trigger is used to achieve time hysteresis**

Figure 14.4.3.1-2 shows that by increasing the time-to-trigger the report is not triggered.

## 14.4.4 Interruption of user data transmission

By including the IE "Tx Interruption after trigger", a UE in CELL\_FACH state may be instructed by the UTRAN to prohibit transmission of user data on the RACH temporarily after a measurement report has been triggered.

The UE shall only resume transmission of user data, when:

- 1> it receives from the UTRAN a message allocating a dedicated physical channel, leading to the transition to CELL\_DCH state; or

1> the time period indicated by the IE "Tx Interruption after trigger" elapses.

The transmission on signalling radio bearers shall not be interrupted.

## 14.5 Quality Measurements

### 14.5.1 Quality reporting measurement quantities

For quality measurements, the following measurement quantities are used:

1. Downlink transport channel BLER
2. Timeslot SIR (TDD only)

### 14.5.2 Quality reporting events

When one measurement identity corresponds to multiple quality events for the same transport channel, the UE behaviour is not specified.

#### 14.5.2.1 Reporting event 5A: A predefined number of bad CRCs is exceeded

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the amount of bad CRCs during a predefined sliding window exceeds a predefined number.

The following three parameters are used in the scheme:

- **Total CRC** = the length of the sliding window over which the number of bad CRCs are counted.
- **Bad CRC** = the number of bad CRC that is required within the latest "Total CRC" received CRCs for the event to be triggered.
- **Pending after trigger** = a new event can not be triggered until "Pending after trigger" CRCs have been received,

When a DCH is established, the UE shall begin to count the number of bad CRCs within the last "Total CRC" received CRCs. No event can be triggered until at least "Total CRC" CRCs have been received. For each new received CRC, the UE shall compare the number of bad CRCs within the latest "Total CRC" received CRCs with the parameter "Bad CRC". An event shall be triggered if the number of bad CRCs is equal or larger than "Bad CRC".

At the time when the event is triggered a pending time after trigger timer is started with the length of "Pending after trigger" CRCs. A new event can not be triggered until "Pending after trigger" CRCs have been received. When "Pending after trigger" CRCs have been received the event evaluation start again and a new event can be triggered.

Figure 14.5.2.1-1: Event triggered CRC error reporting

## 14.6 UE internal measurements

### 14.6.1 UE internal measurement quantities

For UE internal measurements the following measurement quantities exist:

1. UE transmission (Tx) power, for TDD measured on a timeslot basis.
2. UE received signal strength power (RSSI).
3. UE Rx-Tx time difference (FDD only).
4.  $T_{ADV}$  (1.28 Mcps TDD).

### 14.6.2 UE internal measurement reporting events

In the Measurement reporting criteria field in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE internal measurement reporting events that can trigger a report are given below. The reporting events are marked with vertical arrows in the figures below. All events can be combined with time-to-trigger.

NOTE: The reporting events are numbered 6A, 6B, 6C,... where 6 denotes that the event belongs to the type UE internal measurements.

When one measurement identity corresponds to multiple internal events with identical event identities, the UE behaviour is not defined.

#### 14.6.2.1 Reporting event 6A: The UE Tx power becomes larger than an absolute threshold

When a UE internal measurement configuring event 6a is set up, the UE shall:

- 1> create a variable TRIGGERED\_6A\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power (for TDD within a single TS) is greater than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT\_IDENTITY for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6A\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_6A\_EVENT to TRUE;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "UE internal measurement event results": "UE internal event identity" to "6a";
      - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
  - 1> if the variable TRIGGERED\_6A\_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is less or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT\_IDENTITY:
    - 2> set the variable TRIGGERED\_6A\_EVENT to FALSE.

#### 14.6.2.2 Reporting event 6B: The UE Tx power becomes less than an absolute threshold

When a UE internal measurement configuring event 6b is set up, the UE shall:

- 1> create a variable TRIGGERED\_6B\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power (for TDD within a single TS) is less than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT\_IDENTITY for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6B\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_6B\_EVENT to TRUE;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "UE internal measurement event results": "UE internal event identity" to "6b";
      - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
  - 1> if the variable TRIGGERED\_6B\_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is greater or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT\_IDENTITY:
    - 2> set the variable TRIGGERED\_6B\_EVENT to FALSE.

**Figure 14.6.2.2-1: Event-triggered measurement reports when the UE Tx power becomes larger or less than absolute thresholds**

### 14.6.2.3 Reporting event 6C: The UE Tx power reaches its minimum value

When a UE internal measurement configuring event 6c is set up, the UE shall:

- 1> create a variable TRIGGERED\_6C\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power is equal its minimum value (for TDD its minimum value on a single TS) for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6C\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_6C\_EVENT to TRUE;
    - 3> send a measurement report with IEs set as below:

- 4> set in "UE internal measurement event results": "UE internal event identity" to "6c";
  - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
- 1> if the variable TRIGGERED\_6C\_EVENT is set to TRUE and if the UE Tx power is greater than its minimum value:
- 2> set the variable TRIGGERED\_6C\_EVENT to FALSE.

**Figure 14.6.2.3-1: Event-triggered measurement report when the UE Tx power reaches its minimum value**

#### 14.6.2.4 Reporting event 6D: The UE Tx power reaches its maximum value

When a UE internal measurement configuring event 6d is set up, the UE shall:

- 1> create a variable TRIGGERED\_6D\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Tx power equals the maximum power the UE can transmit, i.e. the maximum UE TX power reduced by the power reduction used by the UE (for TDD its maximum value on a single TS) for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6D\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_6D\_EVENT to TRUE;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "UE internal measurement event results": "UE internal event identity" to "6d";
      - 4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.
- 1> if the variable TRIGGERED\_6D\_EVENT is set to TRUE and if the UE Tx power is less than the maximum UE TX power:
  - 2> set the variable TRIGGERED\_6D\_EVENT to FALSE.

NOTE: The maximum UE TX power is defined in subclause 8.6.6.8 and the maximum allowed power reduction is defined in subclause 6.2.2 in [21].

**Figure 14.6.2.4-1: Event-triggered report when the UE Tx power reaches its maximum value**

#### 14.6.2.5 Reporting event 6E: The UE RSSI reaches the UE's dynamic receiver range

When a UE internal measurement configuring event 6e is set up, the UE shall:

- 1> create a variable TRIGGERED\_6E\_EVENT related to that measurement, which shall initially be set to FALSE;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE RSSI is greater or equal the UE's dynamic receiver range for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6E\_EVENT is set to FALSE:
    - 3> set the variable TRIGGERED\_6E\_EVENT to TRUE;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "UE internal measurement event results": "UE internal event identity" to "6e";
      - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.
- 1> if the variable TRIGGERED\_6E\_EVENT is set to TRUE and if the UE RSSI is less than the UE's dynamic receiver range:
  - 2> set the variable TRIGGERED\_6E\_EVENT to FALSE.

#### 14.6.2.6 Reporting event 6F (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

- 1> create a variable TRIGGERED\_6F\_EVENT related to that measurement, which shall initially be set to FALSE for each RL;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Rx-Tx time difference for a RL included in the active set is greater than the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT\_IDENTITY for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6F\_EVENT is set to FALSE for this RL:

- 3> set the variable TRIGGERED\_6F\_EVENT to TRUE for this RL;
- 3> send a measurement report with IEs set as below:
  - 4> set in "UE internal measurement event results": "UE internal event identity" to "6f";
  - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.
- 1> if the variable TRIGGERED\_6F\_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is less than or equal to the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT\_IDENTITY:
  - 2> set the variable TRIGGERED\_6F\_EVENT to FALSE for this RL.

#### 14.6.2.6a Reporting event 6F (1.28 Mcps TDD): The time difference indicated by $T_{ADV}$ becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

- 1> create a variable TRIGGERED\_6F\_EVENT related to that measurement, which shall initially be set to the currently measured  $T_{ADV}$ ;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the absolute value of the difference between the measured  $T_{ADV}$  and the  $T_{ADV}$  stored in the variable TRIGGERED\_6F\_EVENT is greater than the predefined threshold configured with the IE " $T_{ADV}$  Threshold" for this event in the variable MEASUREMENT\_IDENTITY for a time period indicated by the IE "time\_to\_trigger":
  - 2> set the variable TRIGGERED\_6F\_EVENT to the currently measured  $T_{ADV}$ ;
  - 2> send a measurement report with IEs set as below:
    - 3> set the IE " $T_{ADV}$ " to the measured value, and the IE "SFN" to the SFN during which the latest measurement was performed, in the IE " $T_{ADV}$  Info";
    - 3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

#### 14.6.2.7 Reporting event 6G: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

When a UE internal measurement configuring event 6g is set up, the UE shall:

- 1> create a variable TRIGGERED\_6G\_EVENT related to that measurement, which shall initially be set to FALSE for each RL;
- 1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE Rx-Tx time difference for a RL included in the active set is less than the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT\_IDENTITY for a time period indicated by the IE "time\_to\_trigger":
  - 2> if the variable TRIGGERED\_6G\_EVENT is set to FALSE for this RL:
    - 3> set the variable TRIGGERED\_6G\_EVENT to TRUE for this RL;
    - 3> send a measurement report with IEs set as below:
      - 4> set in "UE internal measurement event results": "UE internal event identity" to "6g";
      - 4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

1> if the variable TRIGGERED\_6G\_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is greater or equal the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT\_IDENTITY:

2> set the variable TRIGGERED\_6G\_EVENT to FALSE for this RL.

## 14.7 UE positioning measurements

### 14.7.1 UE positioning measurement quantities

The quantity to measure for UE positioning is dependent on the positioning method and the method type requested in the IE "UE positioning reporting quantity".

- 1 SFN-SFN observed time difference type 2, optional.
- 2 Rx-Tx time difference type 2, optional.
- 3 GPS timing of cell frames, optional.

The definition of other GPS measurements is not within the scope of this specification.

### 14.7.2 Void

### 14.7.3 UE positioning reporting events

In the IE "UE positioning reporting criteria" in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE positioning reporting events that can trigger a report are given below. The content of the measurement report is dependant on the positioning method and method type requested in the IE "UE positioning reporting quantity" of the Measurement Control message and is described in detail in [18].

When one measurement identity corresponds to multiple positioning events with identical event identities, the UE behaviour is not defined.

#### 14.7.3.1 Reporting Event 7a: The UE position changes more than an absolute threshold

This event is used for UE-based methods only.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> if the UE changes its position compared to the last reported position by more than the threshold defined by the IE "Threshold position change"; or
- 1> if no position has been reported since the event was configured and the UE changes its position compared to the first position estimate obtained after the event was configured by more than the threshold defined by the IE "Threshold position change":
  - 2> send a measurement report as specified in subclause 8.6.7.19.1b;
  - 2> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is greater than zero:
    - 3> decrease IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event by one.
  - 2> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is equal to zero:
    - 3> delete this event from the list of events in variable MEASUREMENT\_IDENTITY.
- 1> if the UE is unable to evaluate the event because a position measurement is not available:
  - 2> not send a report.

### 14.7.3.2 Reporting Event 7b: SFN-SFN measurement changes more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the SFN-SFN time difference measurement type 2 of any measured cell changes more than the threshold defined by the IE "Threshold SFN-SFN change"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-based":
  - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted":
  - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted preferred but UE-based allowed" or "UE-based preferred but UE-assisted allowed":
  - 2> the UE may choose to act according to either subclause 8.6.7.19.1a or 8.6.7.19.1b.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is greater than zero:
  - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is equal to zero:
  - 2> delete this event from the list of events in variable MEASUREMENT\_IDENTITY.

### 14.7.3.3 Reporting Event 7c: GPS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the GPS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GPS TOW"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":
  - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":
  - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":
  - 2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is greater than zero:
  - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is equal to zero:
  - 2> delete this event from the list of events in variable MEASUREMENT\_IDENTITY.

#### 14.7.3.4 Reporting Event 7d: GANSS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

- 1> send a measurement report when the GANSS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GANSS TOW"; and
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":
  - 2> act as specified in subclause 8.6.7.19.1b.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":
  - 2> act as specified in subclause 8.6.7.19.1a.
- 1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":
  - 2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is greater than zero:
  - 2> decrease IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event by one.
- 1> if the value of IE "Amount of Reporting" in variable MEASUREMENT\_IDENTITY for this event is equal to zero:
  - 2> delete this event from the list of events in variable MEASUREMENT\_IDENTITY.

## 14.8 Void

## 14.9 Downlink power control

### 14.9.1 Generalities

This function is implemented in the UE in order to set the SIR target value on each CCTrCH used for the downlink power control. This SIR value shall be adjusted according to an autonomous function in the UE in order to achieve the same measured quality as the quality target set by UTRAN. The quality target is set as the transport channel BLER value for each transport channel as signalled by UTRAN.

When transport channel BLER is used the UE shall run a quality target control loop such that the quality requirement is met for each transport channel, which has been assigned a BLER target.

The UE shall set the SIR target when the physical channel has been set up or reconfigured. It shall not increase the SIR target value before the power control has converged on the current value. The UE may estimate whether the power control has converged on the current value, by comparing the averaged measured SIR to the SIR target value.

NOTE: The power control function for F-DPCH is specified in [29].

### 14.9.2 Downlink power control in compressed mode

In compressed mode, the target SIR needs to be changed in several frames compared to normal mode. For this purpose, four values DeltaSIR1, DeltaSIRafter1, DeltaSIR2 and DeltaSIRafter2 are signalled by the UTRAN to the UE (see subclause 10.3.6.33).

For each frame, the target SIR offset during compressed mode, compared to normal mode is:

$$\Delta\text{SIR} = \max(\Delta\text{SIR1\_compression}, \dots, \Delta\text{SIRn\_compression}) + \Delta\text{SIR1\_coding} + \Delta\text{SIR2\_coding}$$

where  $n$  is the number of TTI lengths for all TrChs of the CCTrCh,  $F_i$  is the length in number of frames of the  $i$ -th TTI and where  $\Delta\text{SIR\_coding}$  fulfils:

- $\Delta\text{SIR1\_coding} = \text{DeltaSIR1}$  if the start of the first transmission gap in the transmission gap pattern is within the current frame.
- $\Delta\text{SIR1\_coding} = \text{DeltaSIRafter1}$  if the current frame just follows a frame containing the start of the first transmission gap in the transmission gap pattern.
- $\Delta\text{SIR2\_coding} = \text{DeltaSIR2}$  if the start of the second transmission gap in the transmission gap pattern is within the current frame.
- $\Delta\text{SIR2\_coding} = \text{DeltaSIRafter2}$  if the current frame just follows a frame containing the start of the second transmission gap in the transmission gap pattern.
- $\Delta\text{SIR1\_coding} = 0$  and  $\Delta\text{SIR2\_coding} = 0$  otherwise.

and  $\Delta\text{SIRi\_compression}$  is defined by :

- $\Delta\text{SIRi\_compression} = 3$  dB for downlink frames compressed by reducing the spreading factor by 2.
- $\Delta\text{SIRi\_compression} = 0$  dB in all other cases.

Several compressed mode patterns applying to the same frames should be avoided as much as possible.

In case several compressed mode patterns are used simultaneously, a  $\Delta\text{SIR}$  offset is computed for each compressed mode pattern and the sum of all  $\Delta\text{SIR}$  offsets is applied to the frame.

## 14.10 Calculated Transport Format Combination

The Calculated Transport Format Combination (CTFC) is a tool for efficient signalling of transport format combinations.

Let  $I$  be the number of transport channels that are included in the transport format combination. For DCHs, all configured DCHs are included in the transport format combination. Each transport channel  $\text{TrCH}_i$ ,  $i = 1, 2, \dots, I$ , has  $L_i$  transport formats, i.e. the transport format indicator  $\text{TFI}_i$  can take  $L_i$  values,  $\text{TFI}_i \in \{0, 1, 2, \dots, L_i - 1\}$ .

Define  $P_i = \prod_{j=0}^{i-1} L_j$ , where  $i = 1, 2, \dots, I$ , and  $L_0 = 1$ .

Let  $\text{TFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I)$  be the transport format combination for which  $\text{TrCH}_1$  has transport format  $\text{TFI}_1$ ,  $\text{TrCH}_2$  has transport format  $\text{TFI}_2$ , etc. The corresponding  $\text{CTFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I)$  is then computed as:

$$\text{CTFC}(\text{TFI}_1, \text{TFI}_2, \dots, \text{TFI}_I) = \sum_{i=1}^I \text{TFI}_i \cdot P_i.$$

For FACH and PCH transport channels, "TrCH<sub>1</sub>" corresponds to the transport channel listed at the first position in IE "FACH/PCH information" in IE "Secondary CCPCCH System Information", "TrCH<sub>2</sub>" corresponds to the transport channel listed at the second position in IE "FACH/PCH information" and so on.

For all other transport channels in FDD and for all configured transport channels of the same transport channel type (i.e. DCH, DSCH, USCH) in TDD, "TrCH<sub>1</sub>" corresponds to the transport channel having the lowest transport channel identity in the transport format combination mapped to the TFCI field. "TrCH<sub>2</sub>" corresponds to the transport channel having the next lowest transport channel identity, and so on.

## 14.10.1 Default TFCS for MBMS

### 14.10.1.1 S-CCPCH configuration including a FACH carrying MSCH

In case the S-CCPCH configuration includes a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the FACH carrying MSCH, TrCH 2 be the first TrCH carrying MTCH listed in the IE "TrCh information list", TrCH 3 be the second TrCH carrying MTCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH carrying MTCH listed in the IE "TrCh information list".

Each transport channel TrCH<sub>*i*</sub>, *i* = 1, 2, ..., *I*, has *L<sub>i</sub>* transport formats, i.e. the transport format indicator TFI<sub>*i*</sub> can take *L<sub>i</sub>* values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

TFC = (TFI<sub>1</sub>, TFI<sub>2</sub>, ..., TFI<sub>*I*</sub>).

The "MBMS implicit TFCS" contains then the following set of TFCs:

$$\text{TFCS} = \{(0,0,\dots,0), (0,1,\dots,0), \dots, (0,L_2,\dots,0), (0,0,1,\dots,0), \dots, (0,0,L_3,\dots,0), \dots, (0,0,0,\dots,1), \dots, (0,0,0,\dots,L_I), \\ (1,0,\dots,0), (1,1,\dots,0), \dots, (1,L_2,\dots,0), (1,0,1,\dots,0), \dots, (1,0,L_3,\dots,0), \dots, (1,0,0,\dots,1), \dots, (1,0,0,\dots,L_I), \\ (2,0,\dots,0), \dots, (L_1,0,\dots,0)\}$$

### 14.10.1.2 S-CCPCH configuration not including a FACH carrying MSCH

In case the S-CCPCH configuration does not include a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the first TrCH listed in the IE "TrCh information list", TrCH 2 be the second TrCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH listed in the IE "TrCh information list".

Each transport channel TrCH<sub>*i*</sub>, *i* = 1, 2, ..., *I*, has *L<sub>i</sub>* transport formats, i.e. the transport format indicator TFI<sub>*i*</sub> can take *L<sub>i</sub>* values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

TFC = (TFI<sub>1</sub>, TFI<sub>2</sub>, ..., TFI<sub>*I*</sub>).

The "MBMS implicit TFCS" contains then the following set of TFCs:

$$\text{TFCS} = \{(0,\dots,0), (1,\dots,0), \dots, (L_1,\dots,0), (0,1,\dots,0), \dots, (0,L_2,\dots,0), \dots, (0,0,\dots,1), \dots, (0,0,\dots,L_I)\}$$

## 14.11 UE autonomous update of virtual active set on non-used frequency (FDD only)

In the text that follows:

- a "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection;
- a "non-used frequency (resp. cell) considered in an inter-frequency measurement" shall be understood as a non-used frequency (resp. cell) included in the list of cells pointed at in the IE "cells for measurement" if it was received for that measurement, or otherwise as a non-used frequency (resp. cell) included in the "Inter-frequency cell info" part of the variable CELL\_INFO\_LIST.

For event-triggered inter frequency measurements it is possible to use intra-frequency measurement reporting events for support of maintenance of an active set associated with a non-used frequency considered in that measurement, a "virtual

active set" and used in the evaluation of the frequency quality estimates. The "initial virtual active set" for a frequency is the virtual active set that is associated to that frequency just after a message was received that sets up or modifies the inter-frequency measurement.

The way the virtual active sets are initiated and updated for the non-used frequencies considered in an inter-frequency measurement is described in the two subclauses below.

The UE shall support a single virtual active set per non-used frequency.

The virtual active set is not initialised and maintained for an inter frequency measurement with periodic reporting. A virtual active set initialised and maintained by another inter-frequency measurement does not affect reporting of the periodic inter-frequency measurement.

### 14.11.1 Initial virtual active set

If the UE receives a MEASUREMENT CONTROL message that sets up or modifies an inter-frequency measurement and includes the IE "Inter-frequency set update"; or

If at least one cell can be measured on a non-used frequency for which the current virtual active set is empty (see subclause 14.11.2), the UE shall:

- 1> for each non-used frequency  $F_i$  considered in the measurement where cells can be measured:
  - 2> if event 1a is configured for the used frequency in an intra-frequency measurement:
    - 3> include in the initial virtual active set the  $N_i$  cells that have either the greatest downlink  $E_c/N_0$  or the greatest downlink RSCP after despreading or the lowest pathloss (the measurement quantity to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the event 1a configuration is taken), among the cells on frequency  $F_i$  considered in that inter-frequency measurement, where:

$$N_i = \min(N_{1a}, N_{Cells\ F_i}) \text{ if } N_{1a} \neq 0 \text{ and } N_i = N_{Cells\ F_i} \text{ otherwise.}$$

where:

$N_{1a}$  is the "Reporting deactivation threshold" included in the intra-frequency measurement for the first event 1a defined in the intra-frequency measurement with the lowest identity at the time the inter-frequency measurement was received with the IE "Inter-frequency set update" present.

$N_{Cells\ F_i}$  is the number of cells on frequency  $F_i$  considered in that inter-frequency measurement.

2> else:

$$N_i = N_{Cells\ F_i}$$

where:

$N_{Cells\ F_i}$  is the number of cells on frequency  $F_i$  considered in that inter-frequency measurement.

NOTE1: The UE initialises the virtual active set with up to the maximum number of inter-frequency cells supported by the UE as defined in [19].

NOTE2: If the UTRAN configures more than one measurement using events 2A, 2B, 2C or 2E the UE measurement capabilities may be exceeded due to the necessary copying of 1A, 1B, 1C criteria. To avoid this the UTRAN may configure one measurement to apply to multiple frequencies so that the 1A, 1B, and 1C criteria will only be copied once.

NOTE3: After a hard handover (see subclause 8.3.5), if the MEASUREMENT CONTROL message that restarts an inter-frequency measurement using the virtual active set does not include the IE "Inter-frequency set update", the UE behaviour regarding the virtual active set is not specified.

## 14.11.2 Virtual active set update during an inter-frequency measurement

For an inter-frequency measurement, the UE shall:

- 1> apply the events of type 1a, 1b and 1c that were defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was last received with the IE "Inter-frequency set update" present; and
- 1> update the virtual active set for the non-used frequencies considered in that measurement according to the following rules:
  - 2> if several events of type 1a (resp. 1b,1c) were defined for the used frequency when the inter-frequency measurement was last received with the IE "Inter-frequency set update" present, only the first 1a event (resp 1b, 1c) that was defined in the measurement with the lowest measurement identity shall apply to the non-used frequencies;
  - 2> all the cells considered in the inter-frequency measurements shall be able to affect the reporting range for event 1a and 1b. (i.e. the IE "Cells forbidden to affect reporting range" possibly stored for the intra-frequency measurements on the used frequency does not apply to the non-used frequencies considered in the inter-frequency measurement);
  - 2> the IEs "amount of reporting" and "reporting interval" that were stored for the intra-frequency measurements on the used frequency shall not be considered if reports of the virtual active set updates are needed.
  - 2> the measurement quantity and filter coefficient to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the intra-frequency event configuration is taken.

NOTE: If the measurement quantity and filter coefficients to be used differ for the 1a, 1b, and 1c events applied then the UE behaviour is unspecified.

- 1> if event 1a is applicable to the non-used frequencies considered in the inter-frequency measurement, always only consider monitored cells that are not in the virtual active set for this event, and:
  - 2> when this event is triggered (according to the criteria described in subclause 14.1.2.1) by a cell for a non-used frequency considered in that measurement:
    - 3> if the "Reporting deactivation threshold" is equal to 0, or if the "Reporting deactivation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is less than or equal to the "Reporting deactivation threshold":
      - 4> add the primary CPICH that enters the reporting range to the "virtual active set".
  - 2> if event 1b is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider cells in the virtual active set for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.2) by a cell for a non-used frequency considered in that measurement:
    - 3> if the number of cells included in the virtual active set is greater than 1:
      - 4> remove the primary CPICH that leaves the reporting range from the "virtual active set".
  - 2> if event 1c is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider monitored cells for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.3) by a cell for a non-used frequency considered in that measurement:
    - 3> if the "Replacement activation threshold" is equal to 0, or if the "Replacement activation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is greater than or equal to the "Replacement activation threshold":
      - 4> rank all active and non-active primary CPICHs and take the  $n$  best cells to create a new "virtual active set", where  $n$  is the number of active primary CPICHs in the "virtual active set".
- 1> if Event 1a is not defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was set up:

- 2> the UE shall continuously update the virtual active set to consist of all cells on frequency  $F_i$  considered in that inter-frequency measurement.

NOTE: The UE needs to only update the virtual active set with up to the maximum number of interfrequency cells supported by the UE as defined in [19].

If none of the cells that are considered in the measurement on this frequency were measured, the UE may treat the virtual active set as empty and follow the appropriate initialisation procedure in subclause 14.11.1 when any relevant cell can first be measured.

If a cell is a member of the virtual active set and is removed from the variable CELL\_INFO\_LIST or removed from the list of cells pointed at by the IE "Cells for measurement" for the inter-frequency measurement then the UE shall remove the cell from the virtual active set.

If an inter-frequency measurement that initialised a virtual active set is released, then any virtual active set associated with this measurement shall also be released.

## 14.12 Provision and reception of RRC information between network nodes

### 14.12.0 General

In certain cases, e.g., when performing handover to UTRAN or when performing SRNC relocation, RRC information may need to be transferred between UTRAN nodes, between UTRAN and another RAT, between nodes within another RAT or between the UE and another RAT.

The RRC information exchanged between network nodes or between the UE and another RAT is typically transferred by means of RRC information containers. An RRC information container is a self-contained and extensible RRC information unit that may be used to transfer a number of different RRC messages, one at a time. As stated before, RRC information containers may be used to transfer RRC messages across interfaces other than the Uu interface. The RRC messages that may be included in RRC information containers have similar characteristics as the RRC messages that are transferred across the Uu interface.

The RRC messages that are sent to/ from the UE, e.g., HANDOVER TO UTRAN COMMAND, INTER RAT HANDOVER INFO are covered by (sub)clauses 8, 9, 10, 11.0-11.4 and 12 of this specification. The following subclauses concern RRC messages exchanged between network nodes.

In future versions of this specification, it is possible to extend the RRC messages transferred across interfaces other than Uu. For these RRC messages the same extension mechanism applies as defined for RRC messages transferred across the Uu interface, as is specified in subclause 10.1, i.e., both critical and non-critical extensions may be added.

The transfer syntax for RRC information containers and RRC messages transferred between network nodes is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned (X.691). It should be noted that the encoder adds final padding to achieve octet alignment. The resulting octet string is, carried in a container, transferred between the network nodes.

When using a separate RRC information container for each endpoint, the receiving RRC protocol entity is able to interpret the received container; this means that the receiver need not take into account information about the (network interface) message used in transferring the container.

The following encoding rules apply in addition to what has been specified in X.691 [49]:

- 1> When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

## 14.12.0a General error handling for RRC messages exchanged between network nodes

The error handling for RRC messages that are exchanged between network nodes applies the same principles as defined for other RRC messages.

Although the same principles apply for network nodes receiving unknown, unforeseen and erroneous RRC messages received in RRC information containers, the notification of the error should be done in a different manner, as specified in the following:

The network node receiving an invalid RRC message from another network node should:

- 1> if the received RRC message was unknown, unforeseen or erroneous:
  - 2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to "Protocol error" and the IE "Protocol error information" including an IE "Protocol error cause" which should be set as follows:
    - 3> to "ASN.1 violation or encoding error" upon receiving an RRC message for which the encoded message does not result in any valid abstract syntax value;
    - 3> to "Message type non-existent or not implemented" upon receiving an unknown RRC message type;
    - 3> to "Message extension not comprehended" upon receiving an RRC message including an undefined critical message extension;
    - 3> to "Information element value not comprehended" upon receiving an RRC message including a mandatory IE for which no default value is defined and for which either the value is set to spare or for which the encoded IE does not result in a valid transfer syntax. The same applies for conditional IEs, for which the conditions for presence are met, the IE is present but has a value set to spare or for which the encoded IE does not result in a valid transfer syntax;
    - 3> to "Information element missing" upon receiving an RRC information container with an absent conditional IE for which the conditions for presence are met.
  - 2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to a value that reflects the failure cause.
- 1> send the RRC FAILURE INFO message to the network node from which the invalid RRC protocol information was received.

NOTE 1: The appropriate (failure) messages used across the network interfaces may not support the inclusion of a RRC information container. In this case, the information contained in the RRC FAILURE INFO message may need to be transferred otherwise e.g. by mapping to a cause value (e.g. a cause value in the RR-HANDOVER FAILURE message when there is a error associated with the RRC-HANDOVER TO UTRAN COMMAND message).

NOTE 2 In case the RRC procedure used to perform SRNS relocation fails e.g. due to non comprehension, the source RNC may notify the target RNC by including the diagnostics information (IEs "Protocol error" and "Protocol error information") in the "RRC message "SRNS Relocation" Info sent in the RRC information container" used for a subsequent relocation request.

### 14.12.1 RRC Information to target RNC

The RRC information container "RRC Information to target RNC" may either be sent from source RNC or from another RAT. In case of handover to UTRAN, this information originates from another RAT, while in case of SRNC relocation the RRC information originates from the source RNC. In case of handover to UTRAN, the RRC information transferred may provide UTRAN specific information, as defined in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, that the target RNC needs when preparing the handover command message. In case of SRNC relocation and handover/cell reselection from GERAN *Iu mode*, the RRC information transferred specifies the configuration of RRC and the lower layers it controls, e.g., including the radio bearer and transport channel configuration. It is used by the target RNC to initialise RRC and the lower layer protocols to facilitate SRNC relocation and handover/cell reselection from GERAN *Iu mode* in a manner transparent to the UE.

RFC 3095 CONTEXT INFO is used to transfer the compressor and decompressor context information of the RFC 3095 protocol from source RNC to target RNC.

Information Element/Group Name	Need	Multi	Type and reference	Semantics description	Version
CHOICE case	MP			At least one spare choice, Criticality: Reject, is needed

>SRNC relocation			SRNS RELOCATION INFO 14.12.4.2		
>RFC 3095 context info			RFC 3095 CONTEXT INFO 14.12.4.4		REL-5

## 14.12.2 RRC information, target RNC to source RNC

There are 2 possible cases for RNC relocation:

1. The UE is already under control of target RNC; and
2. The SRNC Relocation with Hard Handover (UE still under control of SRNC), but UE is moving to a location controlled by the target RNC (based on measurement information).

In case 1 the relocation is transparent to the UE and there is no "reverse" direction container. The SRNC just assigns the 'serving' function to the target RNC, which then becomes the Serving RNC.

In case 2 the relocation is initiated by SRNC, which also provides the RRC Initialisation Information to the target RNC. Base on this information, the target RNC prepares the Hard Handover Message ( "Physical channel reconfiguration" (subclause 8.2.6), "radio bearer establishment" (subclause 8.2.1), "Radio bearer reconfiguration" (subclause 8.2.2), "Radio bearer release" (subclause 8.2.3) or "Transport channel reconfiguration" (subclause 8.2.4).

In case 2 two possibilities are defined in order to transmit the relocation message from the target RNC to the source RNC which can be chosen by the source RNC by including or not including the IE "RB Id for handover message" in the IE "SRNS Relocation Info".

In case the IE "RB Id for handover message" has been received by the target RNC in the IE "SRNS Relocation Info", the target RNC should choose the IE "DL DCCCH message" and include the DL DCCCH message that should be transmitted transparently to the UE by the source RNC. In that case, the target RNC is integrity protecting the message if applicable.

If the target RNC did not receive the IE "RB Id for handover message" in the IE "SRNS Relocation Info" the target RNC should use another choice. In that case, the source RNC should integrity protect the message before transmitting it to the UE if applicable.

The source RNC then transmits the Handover Message to the UE, which then performs the handover.

In the successful case, the UE transmits an XXX COMPLETE message, using the new configuration, to the target RNC.

In case of failure, the UE transmits an XXX FAILURE, using the old configuration, to the source RNC and the RRC context remains unchanged (has to be confirmed and checked with the SRNS relocation procedure).

### 14.12.3 Void

## 14.12.4 RRC messages exchanged between network nodes

### 14.12.4.0 HANDOVER TO UTRAN COMMAND

This RRC message is sent between network nodes to transfer the actual handover command including the details of the radio configuration to be used upon handover to UTRAN as compiled by the target RNC.

Direction: target RNC →source RAT

The message is exactly the same as the HANDOVER TO UTRAN COMMAND defined in subclause 10.2.16a.

### 14.12.4.0a INTER RAT HANDOVER INFO

This RRC message is sent between network nodes to transfer information relevant for the target RNC when preparing for handover to UTRAN.

Direction: source RAT node→target RAT node

The message is exactly the same as the INTER RAT HANDOVER INFO defined in subclause 10.2.16d.

### 14.12.4.1 INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES

This RRC message is sent between network nodes when preparing for an inter RAT handover to UTRAN.

The radio access capabilities for the source RAT and target RAT shall always be included; the radio access capabilities for other RATs may be included if available at the source RAT.

Direction: source RAT→target RNC

Condition	Explanation
<i>ProtErr</i>	This IE is mandatory present if the IE "Protocol error indicator" is included and has the value TRUE. Otherwise it is not needed.

NOTE1: To facilitate that network nodes can transparently forward the RRC information received, the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES should include the entire INTER RAT HANDOVER INFO message. The network node, which may not be able to decode the information received, may only append some information to what was received.

NOTE2: The above table does not need to reflect the order of the information elements in the actual encoded message. The order, that is reflected in the ASN.1, should be chosen in a manner that avoids that network nodes need to perform reordering of information elements.

#### 14.12.4.2 SRNS RELOCATION INFO

This RRC message is sent between network nodes when preparing for an SRNS relocation or a handover/cell reselection from GERAN *Iu mode*.

With the presence or absence of the IE "RB identity for Hard Handover message" the source RNC indicates to the target SRNC whether the source RNC expects to receive the choice "DL DCCH message" in the IE "RRC information, target RNC to source RNC" in case the SRNS relocation is of type "UE involved". Furthermore the target RNC uses this information for the calculation of the MAC-I.

Direction: source RNC/RAT→target RNC

maxTDDFreqList	Maximum number of TDD carrier frequencies to be stored in USIM	4
maxFDDFreqCellList	Maximum number of neighbouring FDD cells on one carrier to be stored in USIM	32
maxTDDFreqCellList	Maximum number of neighbouring TDD cells on one carrier to be stored in USIM	32
maxGSMCellList	Maximum number of GSM cells to be stored in USIM	32

---

## Annex B (informative): Description of RRC state transitions including GSM and E-UTRA

This annex contains Stage 2 description of RRC states and state transitions.

### B.1 RRC states and state transitions

After power on, the UE stays in Idle Mode until it transmits a request to establish an RRC Connection. In Idle Mode the connection of the UE is closed on all layers of the access stratum. In Idle Mode the UE is identified by non-access stratum identities such as IMSI, TMSI and P-TMSI. In addition, the UTRAN has no own information about the individual Idle Mode UEs, and it can only address e.g. all UEs in a cell or all UEs monitoring a paging occasion. The UE behaviour within this mode is described in [4].

The UTRA RRC Connected Mode is entered when the RRC Connection is established. The UE is assigned a radio network temporary identity (RNTI) to be used as UE identity on common transport channels.

The RRC states within UTRA RRC Connected Mode reflect the level of UE connection and which transport channels that can be used by the UE.

For inactive stationary data users the UE may fall back to PCH on both the Cell and URA levels. That is, upon the need for paging, the UTRAN checks the current level of connection of the given UE, and decides whether the paging message is sent within the URA, or should it be sent via a specific cell.

### B.2 Transition from Idle Mode to UTRA RRC Connected Mode

The transition to the UTRA RRC Connected Mode from the Idle Mode can only be initiated by the UE by transmitting a request for an RRC Connection. The event is triggered either by a paging request from the network or by a request from upper layers in the UE.

When the UE receives a message from the network that confirms the RRC connection establishment, the UE enters the CELL\_FACH or CELL\_DCH state of UTRA RRC Connected Mode.

In the case of a failure to establish the RRC Connection the UE goes back to Idle Mode. Possible causes are radio link failure, a received reject response from the network or lack of response from the network (timeout).

#### B.2.1 Transitions for Emergency Calls

Refer to [4] for all states and procedures referred to in this subclause. When UE leaves idle mode from state *Camped on any cell* in order to make an emergency call, moving to state *Connected mode (emergency calls only)*, the UE shall attempt to access the current serving cell. If the access attempt to the serving cell fails the UE shall use the *Cell Reselection* procedure. If no acceptable cell is found, the UE shall use the *Any cell selection*. When returning to idle mode, the UE shall use the procedure *Cell selection when leaving connected mode* in order to find an acceptable cell to camp on, state *Camped on any cell*.

### B.3 UTRA RRC Connected Mode States and Transitions

#### B.3.1 CELL\_DCH state

The CELL\_DCH state is characterised by

- For TDD: A dedicated physical channel is allocated to the UE in uplink and downlink or a dedicated physical channel is allocated to the UE in the uplink and HS\_DSCH\_RECEPTION is set to TRUE.

- A dedicated physical channel is allocated to the UE in uplink and downlink.
- For TDD:
  - E\_DCH\_TRANSMISSION is set to TRUE and HS\_DSCH\_RECEPTION is set to TRUE.
  - E\_DCH\_TRANSMISSION is set to TRUE and a dedicated physical channel is allocated to the UE in the downlink.
- The UE is known on cell level according to its current active set.
- Dedicated transport channels, downlink and uplink (TDD) shared transport channels, and a combination of these transport channels can be used by the UE.

The CELL\_DCH-state is entered from the Idle Mode through the setup of an RRC connection, or by establishing a dedicated physical channel from the CELL\_FACH state.

In TDD a PDSCH may be assigned to the UE in this state, to be used for a DSCH. A PUSCH may also be assigned to the UE in this state, to be used for a USCH. If PDSCH or PUSCH are used for TDD, a FACH transport channel may be assigned to the UE for reception of physical shared channel allocation messages.

#### B.3.1.1 Transition from CELL\_DCH to Idle Mode

Transition to Idle Mode is realised through the release of the RRC connection.

#### B.3.1.2 Transition from CELL\_DCH to CELL\_FACH state

Transition to CELL\_FACH state occurs when all dedicated channels have been released, which may be

- a) via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

at the end of the time period for which the dedicated channel was allocated (TDD)

#### B.3.1.3 Transition from CELL\_DCH to CELL\_PCH state

Transition to CELL\_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

#### B.3.1.4 Transition from CELL\_DCH to URA\_PCH state

Transition to URA\_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

#### B.3.1.5 Radio Resource Allocation tasks (CELL\_DCH)

For the DCH, several physical channel allocation strategies may be applied. The allocations can be either permanent (needing a DCH release message) or based on time or amount-of-data.

Resource allocation can be done separately for each packet burst with fast signalling on the DCH

For each radio frame the UE and the network indicate the current data rate (in uplink and downlink respectively) using the transport format combination indicator (TFCI). However, in TDD, DCH and DSCH or USCH may be mapped on different CCTrCHs, their TFCI are totally independent. DCH transmission is not modified by the simultaneous existence of DSCH/USCH. If the configured set of combinations (i.e. transport format set for one transport channel) are found to be insufficient to retain the QoS requirements for a transport channel, the network initiates a reconfiguration of the transport format set (TFS) for that transport channel. This reconfiguration can be done during or in between data transmission. Further, the network can reconfigure the physical channel allowing an increase or decrease of the peak data rate.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

### B.3.1.6 RRC Connection mobility tasks (CELL\_DCH)

Depending on the amount and frequency of data macrodiversity (soft handover) may or may not be applied.

The RRC Connection mobility is handled by measurement reporting, soft handover and Timing re-initialised or Timing-maintained hard handover procedures.

### B.3.1.7 UE Measurements (CELL\_DCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the connected mode measurement control information received in other states until new measurement control information has been assigned to the UE.

### B.3.1.8 Acquisition of system information (CELL\_DCH)

FDD UEs with certain capabilities reads system information broadcast on FACH.

TDD UEs reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

## B.3.2 CELL\_FACH state

The CELL\_FACH state is characterised by:

- No dedicated physical channel is allocated to the UE.
- The UE continuously monitors in the downlink:
  - In 3.84 Mcps TDD and 7.68 Mcps TDD mode:
    - a FACH.
  - In FDD and 1.28 Mcps TDD mode:
    - a FACH; or
    - an HS-DSCHs and optionally a FACH for MBMS reception.
- The UE is assigned a default common or shared transport channel in the uplink (e.g. RACH or common E-DCH (FDD and 1.28 Mcps TDD only)) that it can use anytime according to the access procedure for that transport channel.
- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update.
- In TDD mode, one or several USCH or DSCH transport channels may have been established.

### B.3.2.1 Transition from CELL\_FACH to CELL\_DCH state

A transition occurs, when a dedicated physical channel is established via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

### B.3.2.2 Transition from CELL\_FACH to CELL\_PCH state

The transition occurs when UTRAN orders the UE to move to CELL\_PCH state, which is done via explicit signalling (e.g. CELL UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

### B.3.2.3 Transition from CELL\_FACH to Idle Mode

Upon release of the RRC connection, the UE moves to the idle mode.

### B.3.2.4 Transition from CELL\_FACH to URA\_PCH State

The transition occurs when UTRAN orders the UE to move to URA\_PCH state, which is done via explicit signalling (e.g. URA UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

### B.3.2.5 Radio Resource Allocation Tasks (CELL\_FACH)

For 3.84 Mcps TDD and 7.68 Mcps TDD, in the CELL\_FACH state the UE will monitor a FACH.

For FDD in the CELL\_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception in CELL\_FACH state or IE "HS-DSCH common system information" is not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 1.28 Mcps TDD in the CELL\_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception or IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 3.84 Mcps TDD and 7.68 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH.

For FDD and 1.28 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH, if the UE does not support Enhanced Uplink in CELL\_FACH state and Idle mode, and if IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE is enabled to transmit uplink control signals and it may be able to transmit data packets on common E-DCH.

The network can assign the UE transport channel parameters (e.g. transport format sets) in advance, to be used when a DCH is used. Upon assignment of the physical channel for DCH, the UE moves to CELL\_DCH state and uses the pre-assigned TFS for the DCH.

If no UE dedicated physical channel or transport channel configuration has been assigned, the UE uses the common physical channel and transport channel configuration according to the system information.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

When there is either user or control data to transmit, a selection procedure determines whether the data should be transmitted on a common transport channel, or if a transition to CELL\_DCH should be executed. The selection is dynamic and depends on e.g. traffic parameters (amount of data, packet burst frequency).

In the TDD mode, the UTRAN can assign USCH / DSCH resources to the UE in CELL\_FACH state. When USCH / DSCH resources are assigned, the UE will continue to monitor FACHs, depending on the UE capability. The UE may use the USCH / DSCH to transmit signalling messages or user data in the uplink and / or the downlink using USCH and / or DSCH when resources are allocated to cell and UE is assigned use of those USCH / DSCH.

For the uplink data transmission on USCH the UE reports to the network the traffic volume (current size of RLC data buffers). The UTRAN can use these measurement reports to re-evaluate the current allocation of the USCH / DSCH resources.

### B.3.2.6 RRC Connection mobility tasks (CELL\_FACH)

In this state the location of the UE is known on cell level. A cell update procedure is used to report to the UTRAN, when the UE selects a new cell to observe the common downlink channels of a new cell. Downlink data transmission on the FACH or HS-DSCH (FDD and 1.28 Mcps TDD only) can be started without prior paging.

The UE monitors the broadcast channel and system information on BCCH of its own and neighbour cells and from this the need for the updating of cell location is identified.

The UE performs cell reselection and upon selecting a new UTRA cell, it initiates a cell update procedure. Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

### B.3.2.7 UE Measurements (CELL\_FACH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

By default, the UE uses the measurement control information broadcast within the system information. However, for measurements for which the network also provides measurement control information within a MEASUREMENT CONTROL message, the latter information takes precedence.

### B.3.2.8 Transfer and update of system information (CELL\_FACH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

When the system information is modified, the scheduling information is updated to reflect the changes in system information transmitted on BCH. The new scheduling information is broadcast on FACH and/or on the common HS-DSCH(s) (FDD and 1.28 Mcps TDD only) in order to inform UEs about the changes. If the changes are applicable for the UE, the modified system information is read on BCH.

## B.3.3 CELL\_PCH state

The CELL\_PCH state is characterised by:

- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL\_PCH and URA\_PCH state, and for TDD, no dedicated physical channel is allocated to the UE.  
  
For FDD, if "HS-DSCH paging system information" is included in System Information and the UE does support HS-DSCH reception in CELL\_PCH and URA\_PCH state, dedicated physical channel may be allocated to the UE.
- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL\_PCH and URA\_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.
- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL\_PCH and URA\_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.
- No uplink activity is possible.
- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update in CELL\_FACH state.

The DCCH and DTCH logical channels can only be used in this state if HS-DSCH is used and a dedicated H-RNTI is configured and for 1.28 Mcps TDD a dedicated E-RNTI is configured. Otherwise, if the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel in the known cell to initiate any downlink activity.

### B.3.3.1 Transition from CELL\_PCH to CELL\_FACH state

The UE is transferred to CELL\_FACH state:

- a) by paging from UTRAN (PAGING TYPE1 message)
- b) through any uplink access

### B.3.3.2 Radio Resource Allocation Tasks (CELL\_PCH)

In CELL\_PCH state no resources have been granted for data transmission. For this purpose, a transition to another state has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

### B.3.3.3 RRC Connection mobility tasks (CELL\_PCH)

In the CELL\_PCH state, the UE mobility is performed through cell reselection procedures, which may differ from the one defined in [4].

The UE performs cell reselection and upon selecting a new UTRA cell, it moves to CELL\_FACH state and initiates a cell update procedure in the new cell. After the cell update procedure has been performed, the UE changes its state back to CELL\_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and make an access to that system according to its specifications.

In case of low UE activity, UTRAN may want to reduce the cell-updating overhead by ordering the UE to move to the URA\_PCH State. This transition is made via the CELL\_FACH state. UTRAN may apply an inactivity timer, and optionally, a counter, which counts the number of cell updates e.g. UTRAN orders the UE to move to URA\_PCH when the number of cell updates has exceeded certain limits (network parameter).

### B.3.3.4 UE Measurements (CELL\_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

### B.3.3.5 Transfer and update of system information (CELL\_PCH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

## B.3.4 URA\_PCH State

The URA\_PCH state is characterised by:

- No dedicated channel is allocated to the UE.
- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL\_PCH and URA\_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.

- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL\_PCH and URA\_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.
- No uplink activity is possible.
- The location of the UE is known on UTRAN Registration area level according to the URA assigned to the UE during the last URA update in CELL\_FACH state.

The DCCH logical channel cannot be used in this state. If the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel within the URA where the location of the UE is known. If the UE needs to transmit anything to the network, it goes to the CELL\_FACH state. The transition to URA\_PCH State can be controlled with an inactivity timer, and optionally, with a counter that counts the number of cell updates. When the number of cell updates has exceeded certain limits (a network parameter), then the UE changes to the URA\_PCH State.

URA updating is initiated by the UE, which, upon the detection of the Registration area, sends the network the Registration area update information on the RACH of the new cell.

#### B.3.4.1 Transition from URA\_PCH State to CELL\_FACH State (URA\_PCH)

Any activity causes the UE to be transferred to CELL\_FACH State.

- a) Uplink access is performed by RACH.
- b) by paging from UTRAN ( PAGING TYPE1 message ).

NOTE: The release of an RRC connection is possible in the URA\_PCH state. UE in URA\_PCH is able to go to idle when triggered by paging type 1 message in case "Release indicator" has the value "Release".

#### B.3.4.2 Radio Resource Allocation Tasks (URA\_PCH)

In URA\_PCH State no resources have been granted for data transmission. For this purpose, a transition to CELL\_FACH State has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

#### B.3.4.3 RRC Connection mobility tasks (URA\_PCH)

In URA\_PCH State the location of a UE is known on UTRAN Registration area level.

In this state, the UE mobility is performed through URA reselection procedures, which may differ from the definitions in [4]. The UE performs cell reselection and upon selecting a new UTRA cell belonging to a URA that does not match the URA used by the UE, the UE moves to CELL\_FACH state and initiates a URA update towards the network. After the URA update procedure has been performed, the UE changes its state back to URA\_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

#### B.3.4.4 UE Measurements (URA\_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

#### B.3.4.5 Transfer and update of system information (URA\_PCH)

The same mechanisms to transfer and update system information as for state CELL\_PCH are applicable for UEs in URA\_PCH state.

### B.3.5 States and Transitions for Cell Reselection in URA\_PCH, CELL\_PCH, and CELL\_FACH

**Figure B.3.5-1: UTRA RRC Connected mode cell reselection for URA\_PCH, CELL\_PCH, and CELL\_FACH**

In some states the UE performs cell reselection procedures. The UE selects a suitable cell (defined in [4]) and radio access technology based on connected mode radio measurements and cell reselection criteria.

Figure B.3.5-1 shows the states and procedures in the cell reselection process in connected mode.

When a cell reselection is triggered, the UE evaluates the cell reselection criteria based on radio measurements, and if a better cell is found that cell is selected, procedure Cell reselection (see [4]). If the change of cell implies a change of radio access technology, the RRC connection is released, and the UE enters idle mode of the other RAT. If no suitable cell is found in the cell reselection procedure, the UE eventually enters idle mode.

When an Initial cell reselection is triggered, the UE shall use the Initial cell reselection procedure (see [4]) to find a suitable cell. One example where this procedure is triggered is at radio link failure, where the UE may trigger an initial cell reselection in order to request re-establishment of the RRC connection. If the UE is unable to find a suitable cell, the UE eventually enters idle mode.

## B.4 Inter-RAT handover with CS domain services

When using CS domain services, UTRAN is using an Inter-Radio access system Handover Procedure and GSM is using a Handover procedure for the transition from UTRA RRC Connected Mode to GSM Connected Mode.

## B.5 Inter-RAT handover with PS domain services

When using PS domain services, the UE can initiate cell reselection from a GSM/GPRS cell to a UTRAN cell and then uses the RRC Connection Establishment procedure for the transition to UTRA RRC Connected mode. It is also possible for the BSS to initiate a UTRA Inter-RAT Handover to seamlessly relocate the UE to UTRAN. In this latter case there is no need to return the UE to Idle Mode (GPRS Packet Idle Mode) and the UE immediately moves to RRC connected state in the UTRAN.

In the case that cell reselection is used, when the RRC Connection is established from Idle Mode (GPRS Packet Idle Mode) the RRC CONNECTION REQUEST message contains an indication, that UTRAN needs to continue an already established GPRS UE context from the CN. This indication allows UTRAN to e.g. prioritise the RRC CONNECTION REQUEST from the UE.

It is possible for a E-UTRA eNodeB to initiate a Inter-RAT Handover to UTRAN to seamlessly relocate the UE to the RRC connected state in UTRAN.

In UTRA RRC connected mode UTRAN may use UE or network initiated cell reselection to change from a UTRAN cell to a GSM/GPRS cell. If the cell reselection was successful the UE enters Idle Mode (GPRS Packet Idle Mode). The UE sends a packet channel request from Idle Mode (GPRS Packet Idle mode) to establish a Temporary Block flow and enter GPRS Packet Transfer Mode. In the GPRS Packet Transfer Mode the UE sends a RA Update request message. The RA Update Request message sent from the UE contains an indication that GSM/GPRS need to continue an already established UTRAN UE context from the CN. This means that the RA Update request is always sent for the transition from UTRA RRC Connected Mode to GSM/GPRS regardless if the RA is changed or not.

Alternatively, the UTRAN may use an Inter-System Relocation (PS Handover) to relocate a UTRA RRC connected UE directly to GPRS Packet Transfer Mode in GERAN.

NOTE: The reason for using RA update instead of a new message is to reduce the impact on the existing GSM/GPRS specification.

The UTRAN may use an Inter-RAT Handover to relocate a UTRA RRC connected UE directly to RRC\_CONNECTED mode in E-UTRAN.

## B.6 Inter-RAT handover with simultaneous PS and CS domain services

### B.6.1 Inter-RAT handover UTRAN to GSM / BSS

For a UE in CELL\_DCH state using both CS and PS Domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from UTRAN.

The UE performs the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode first. When the UE has sent handover complete message to GSM / BSS the UE initiates a temporary block flow towards GPRS and sends a RA update request.

If the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode was successful the handover is considered as successful regardless if the UE was able to establish a temporary block flow or not towards GPRS.

In case of Inter-RAT handover failure the UE has the possibility to go back to UTRA RRC Connected Mode and re-establish the connection in the state it originated from.

### B.6.2 Inter-RAT handover GSM / BSS to UTRAN

For a UE in GSM Connected Mode using both CS and PS domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from GSM / BSS.

The UE performs the Inter-RAT handover from GSM Connected Mode to UTRA RRC Connected Mode.

In UTRA RRC Connected Mode both services are established in parallel.

If the Inter-RAT handover from GSM Connected mode to UTRA RRC Connected Mode was successful the handover is considered as successful.

In case of Inter-RAT handover failure the UE has the possibility to go back to GSM Connected Mode and re-establish the connection in the state it originated from.

---

## Annex C (informative): Description for the Compressed Coding of Pre-defined configurations included in the INTER RAT HANDOVER INFO message

This annex contains a description of the compressed coding of the IE "Predefined configuration status information compressed" (see subclause 10.3.4.5b) included in the INTER RAT HANDOVER INFO message.

### C.1 Definitions

**Pre-defined configuration set with different value tags:** This is a set of consecutive positions for which pre-defined configurations are stored with different value tags. The set cannot include positions for which no pre-defined configuration is stored.

**Pre-defined configuration list with variable size:** This is the variable sized list consisting of the value tags corresponding to the remaining positions after the "Pre-defined configuration sets with different value tags" have been formed. This will also indicate not stored pre-defined configurations, either explicitly or implicitly (i.e. in the case that there are no more stored configurations until the end of the variable sized list). This is highlighted in figures C.2-1 and C.2-2.

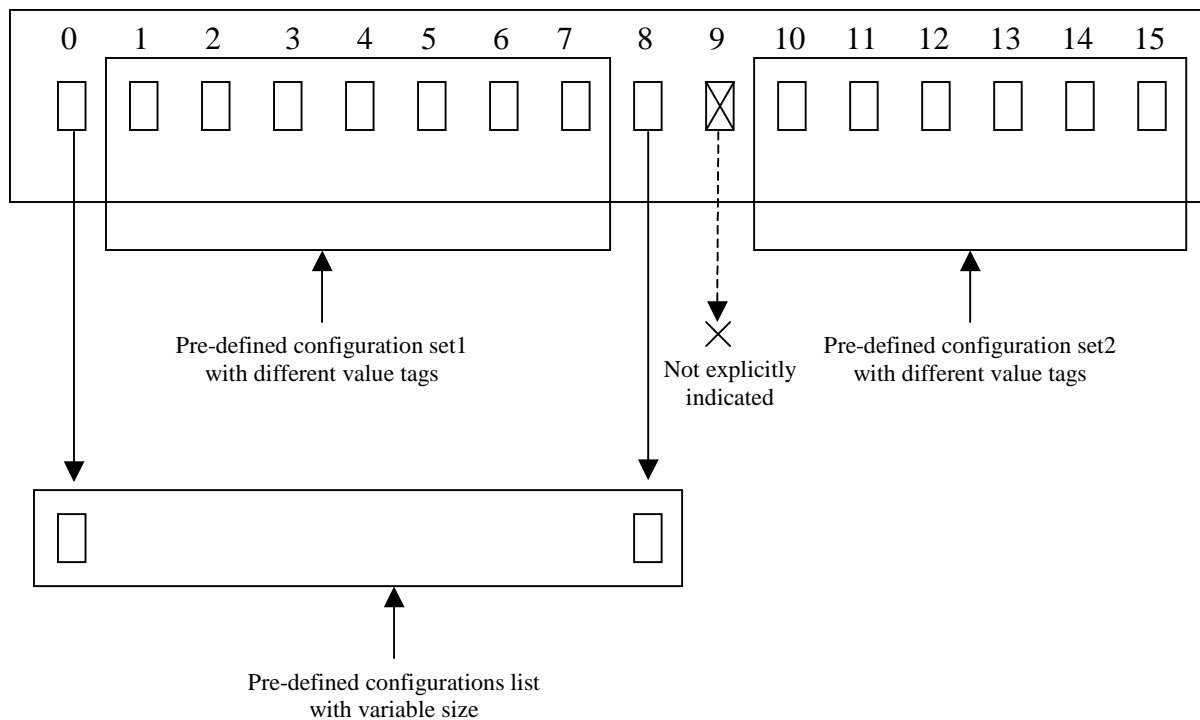

### C.2 Examples of the methodology

From figure C.2-1 it can be seen that there are two "Pre-defined configuration sets with different value tags".

The start position of Set1 is "1" with a list of 7 pre-defined configurations {1, 2, 3, 4, 5, 6, 7}.

The start position of Set2 is "10" with a list of 6 pre-defined configurations {10, 11, 12, 13, 14, 15}.

The "Pre-defined configurations list with variable size" has a start position of 0, and includes all of the pre-defined configurations not included in the sets {0, 8, 9}. The value tag at position 9 is not stored. This does not need to be explicitly indicated in the coding as "not stored" because there are no stored pre-defined configurations positioned after this in the list.

**Figure C.2-1: Example scenario where non-stored pre-defined configurations do not need to be explicitly indicated**

Figure C.2-2 is similar to Figure C.2-1. However in this case for the "Pre-defined configurations list with variable size", the pre-defined configuration in position 8 is not stored. This needs to be explicitly indicated in the coding as "not stored" because there is a stored pre-defined configuration (position 9) positioned after this in the list.

Figure C.2-2: Example scenario where non-stored pre-defined configurations need to be explicitly indicated

---

## Annex D (Normative): Implementation of Domain Specific Access Control (DSAC) in UEs of 3GPP Release 5

UEs of 3GPP Release 5 implementing the domain specific access class control feature but not implementing the network sharing feature shall act on the domain specific access class restriction indicated by the IE "Domain Specific Access Restriction Parameters For PLMN Of MIB" if present, and otherwise apply the access restrictions indicated by the IE "Cell Access Restriction".

## Annex E (Normative): EUTRA Feature group indicators

This annex contains the definitions of the bits in EUTRA Feature Group Indicators.

In this release of the specification the UE shall include the optional EUTRA Feature Group Indicators IE in the UE multi-mode/multi RAT capability IE of the RRC message. For a specific indicator, if all functionalities for a feature group listed in Table E.1 have been implemented and tested, the UE shall set the indicator as "true" (as one), else (i.e. if any one of the functionalities in a feature group listed in Table E.1 have not been implemented or tested), the UE shall set the indicator as zero.

The UE shall set all indicators, which do not have a definition in the table E.1, as "false" (as zero).

If the optional EUTRA Feature Group Indicators IE is not included by a UE supporting a future release of the specification, the network may assume the UE supports all features in the feature groups listed in table E.1 and deployed in the network.

**Table E.1: Defintions of feature group indicators**

Index of indicator (bit number)	Definition (description of the supported functionality, if indicator set to "true")	Notes
1 (leftmost bit)	- UTRA CELL_PCH to EUTRA RRC_IDLE cell reselection - UTRA URA_PCH to EUTRA RRC_IDLE cell reselection	
2	EUTRAN measurements and reporting in connected mode	
3	- UTRA CELL_FACH absolute priority cell reselection for high priority layers	
4	- UTRA CELL_FACH absolute priority cell reselection for all layers	

### Clarification for mobility to EUTRAN

For mobility to E-UTRAN, it is assumed that we have 8 main "functions":

- A. Support of measurements and cell reselection procedure in idle mode
- B. Support of measurements and cell reselection procedure in CELL/URA\_PCH
- C. Support of RRC release with redirection procedure
- D. Support of RRC reject with redirection procedure
- E. Support of EUTRAN measurements and reporting in connected mode
- F. Support of handover procedure in connected mode
- G. Support of high priority layer measurements and cell reselection procedure in CELL\_FACH
- H. Support of all priority layer measurements and cell reselection procedure in CELL\_FACH

Of the above, all UEs that indicate support of E-UTRA in UE capability signalling "Support of E-UTRA FDD" or "Support of E-UTRA TDD" support A), C) and D)) EUTRA bands they support.

For B) above, UEs indicate support by the Group 1 indicator bit (if Group 1 is set to "true", it is supported for all EUTRA bands the UE supports).

For E) above, UEs indicate support by the Group 2 indicator bit (if Group 2 is set to "true", it is supported for all EUTRA bands the UE supports). The compressed mode capability for supported E-UTRA frequency bands ("Need for compressed mode") in "Measurement capability extension" is ignored by the network when Group 2 is set to "false".

For F) above, UEs indicate support by the separate UE capability signaling "Support of Inter-RAT PS Handover to E-UTRA FDD/TDD" defined in TS 25.306 (if this bit is set to "true", PS handover is supported for all EUTRA bands the UE supports). This bit can only be set to "true" if the UE has set the Group 2 indicator bit to "true".

For G) above, UEs indicates support by the Group 3 indicator bit (if Group 3 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL\_FACH also for UTRA inter-frequency.

For H) above, UEs indicates support by the Group 4 indicator bit (if Group 4 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL\_FACH also for UTRA inter-frequency. UEs that indicate support for H also indicate support for G.

## Annex F (informative): Change history

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New

	RP-15	RP-020072	1279		Measurement related corrections	4.3.0	4.4.0
	RP-15	RP-020072	1281		Clarifications on Event 1D	4.3.0	4.4.0
	RP-15	RP-020205	1283	1	Security corrections	4.3.0	4.4.0
	RP-15	RP-020072	1285		Transition from CELL_DCH to CELL_FACH state	4.3.0	4.4.0
	RP-15	RP-020072	1287		Corrections and clarifications of Radio link timing	4.3.0	4.4.0
	RP-15	RP-020072	1289		Spare values in ASN.1	4.3.0	4.4.0
	RP-15	RP-020072	1294		Actions on reception of measurement related IEs	4.3.0	4.4.0
	RP-15	RP-020231	1296	1	Removal of channel coding option "no coding" for FDD and 3.84 Mcps TDD	4.3.0	4.4.0
	RP-15	RP-020072	1298		Timing Indication when moving to CELL_DCH state	4.3.0	4.4.0
	RP-15	RP-020072	1307		Correction to processing RB mapping info	4.3.0	4.4.0
	RP-15	RP-020072	1313		RRC Connection Release following network authentication failure	4.3.0	4.4.0
	RP-15	RP-020072	1317		Clarification on serving cell in SIB11	4.3.0	4.4.0
	RP-15	RP-020073	1319		Treatment of optional elements in RB control messages	4.3.0	4.4.0
	RP-15	RP-020073	1323		Procedure Performance for TDD UL physical Channel Control	4.3.0	4.4.0
	RP-15	RP-020250	1331	1	Clarification to physical channel establishment criteria	4.3.0	4.4.0
	RP-15	RP-020249	1333	1	OTDOA Assistance Data	4.3.0	4.4.0
	RP-15	RP-020073	1337		Retransmission of uplink direct transfer at RLC re-establishment and inter-RAT change	4.3.0	4.4.0
	RP-15	RP-020073	1339		Correction to IE "UL interference" for UTRA TDD	4.3.0	4.4.0
	RP-15	RP-020074	1343		Corrections of UE Positioning requirements	4.3.0	4.4.0
	RP-15	RP-020074	1345		Multimode speech in default configurations	4.3.0	4.4.0
	RP-15	RP-020073	1347		Correction to UE Id for DSCH	4.3.0	4.4.0
	RP-15	RP-020073	1349		Corrections to support combined Cell/URA update and SRNS relocation	4.3.0	4.4.0
	RP-15	RP-020073	1351		Number of UTRAN and Inter-RAT frequencies	4.3.0	4.4.0
	RP-15	RP-020073	1353		Abortion of signalling connection establishment	4.3.0	4.4.0
	RP-15	RP-020073	1358		Modification of GPS timing representation to avoid large integers	4.3.0	4.4.0
	RP-15	RP-020074	1360		Additional TFCS selection guidelines	4.3.0	4.4.0
	RP-15	RP-020074	1362		Clarification of layer 3 filtering of measurements in the UE	4.3.0	4.4.0
	RP-15	RP-020210	1364		Improved readability of procedural text	4.3.0	4.4.0
	RP-15	RP-020228	1366		Clarification on ICS version within UE radio access capabilities	4.3.0	4.4.0
	RP-15	RP-020233	1368		Clarification of Maximum number of TFC in the TFCS	4.3.0	4.4.0
	RP-15	RP-020238	1370		Support of UP measurement reporting in CELL_PCH/URA_PCH	4.3.0	4.4.0
	RP-15	RP-020082	1122	2	Correction to include Cell ID for Cell_DCH state	4.3.0	4.4.0
	RP-15	RP-020082	1187	2	Correction of Transparent mode signalling for UL rate control	4.3.0	4.4.0
	RP-15	RP-020082	1188	2	Introduction of default radio configurations for UMTS_AMR2 with four speech modes	4.3.0	4.4.0
	RP-15	RP-020082	1223	1	Acquisition of PLMN identity of neighbour cells via SIB 18	4.3.0	4.4.0
	RP-15	RP-020082	1254		Various ASN.1 Corrections	4.3.0	4.4.0
	RP-15	RP-020082	1290		Handover from UTRAN failure	4.3.0	4.4.0
	RP-15	RP-020082	1335		Corrections to indicate that SIB 14 is not used by 1.28 TDD	4.3.0	4.4.0
	RP-15	RP-020084	1129	2	Support of flexible hard split mode	4.4.0	5.0.0
	RP-15	RP-020090	1225	1	Introduction of the parameters of OTDOA with IPDL for 1.28 Mcps TDD	4.4.0	5.0.0
	RP-15	RP-020085	1291	1	Radio link timing	4.4.0	5.0.0
	RP-15	RP-020094	1305	2	Introduction of HSDPA	4.4.0	5.0.0
06/2002	RP-16	RP-020330	1373		ASN.1 Corrections	5.0.0	5.1.0
	RP-16	RP-020330	1376		Clarification of unnecessary MP IEs in RADIO BEARER RECONFIGURATION	5.0.0	5.1.0
	RP-16	RP-020330	1379		Correction on SIB type	5.0.0	5.1.0
	RP-16	RP-020330	1382		Clarification to the handling of IE "Cells for measurement" received in SIB 11/12	5.0.0	5.1.0
	RP-16	RP-020330	1385	1	Correction to Cell Update procedure	5.0.0	5.1.0
	RP-16	RP-020330	1388		Correction to handling of FACH measurement occasion info in SIB12	5.0.0	5.1.0
	RP-16	RP-020331	1392		Actions when optional IE "Maximum allowed UL TX power" is missing	5.0.0	5.1.0
	RP-16	RP-020331	1395		Corrections concerning default configurations	5.0.0	5.1.0
	RP-16	RP-020331	1398		Correction concerning when hard handover specific handling applies	5.0.0	5.1.0

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
	RP-16	RP-020331	1401		Handling of variables CELL_INFO_LIST and MEASUREMENT_IDENTITY	5.0.0	5.1.0
	RP-16	RP-020331	1404		IE "Cell Synchronisation Information"	5.0.0	5.1.0
	RP-16	RP-020331	1407		Corrections to Cell Individual Offset	5.0.0	5.1.0
	RP-16	RP-020332	1410		Clarification to Compressed Mode Status Info	5.0.0	5.1.0
	RP-16	RP-020332	1413		Clarification of OTDOA quality figure	5.0.0	5.1.0
	RP-16	RP-020332	1416		Correction to Cell Access Restriction for SIB4	5.0.0	5.1.0
	RP-16	RP-020332	1419		Corrections concerning spare values and comments	5.0.0	5.1.0
	RP-16	RP-020332	1423		Variable for shared channel configurations	5.0.0	5.1.0
	RP-16	RP-020332	1426	1	Integrity protection on RB0	5.0.0	5.1.0
	RP-16	RP-020333	1429	1	Periodic cell update clarifications	5.0.0	5.1.0

	RP-16	RP-020333	1435		Disjoint Active Sets in the Active Set Update procedure	5.0.0	5.1.0
	RP-16	RP-020333	1438		Deletion on compressed mode patterns when moving to CELL_FACH state	5.0.0	5.1.0
	RP-16	RP-020333	1441		TDD C-RNTI in Cell DCH	5.0.0	5.1.0
	RP-16	RP-020333	1444	1	CCTrCH Release in TDD	5.0.0	5.1.0
	RP-16	RP-020334	1447		Layer 3 retransmission of SIGNALLING CONNECTION RELEASE INDICATION	5.0.0	5.1.0
	RP-16	RP-020334	1450		Alignment of tabular and ASN.1 for UTRAN GPS timing of cell frames resolution	5.0.0	5.1.0
	RP-16	RP-020334	1453		Correction to Default Radio Configuration Timers	5.0.0	5.1.0
	RP-16	RP-020334	1456		Clarification to number of L3 filters	5.0.0	5.1.0
	RP-16	RP-020334	1459	1	Correction to 3G to 2G Inter-RAT handover for multi-domain RABs	5.0.0	5.1.0
	RP-16	RP-020334	1462		DCH quality target	5.0.0	5.1.0
	RP-16	RP-020335	1465		Correction to RB Mapping Info	5.0.0	5.1.0
	RP-16	RP-020335	1468	1	Ciphering activation for TM bearers	5.0.0	5.1.0
	RP-16	RP-020335	1471		TFCS selection guideline correction	5.0.0	5.1.0
	RP-16	RP-020382	1480	1	Clarification of Measurement Validity and Valid Measurement Objects	5.0.0	5.1.0
	RP-16	RP-020363	1483		Remaining clarification of Measurement Validity and Valid Measurement Objects	5.0.0	5.1.0
	RP-16	RP-020381	1486	1	Traffic Volume Measurement clarifications	5.0.0	5.1.0
	RP-16	RP-020335	1489		Correction to handling of IE 'Downlink information for each RL'	5.0.0	5.1.0
	RP-16	RP-020336	1492		Corrections to Security procedure on Missing integrity protection reset on relocation and counter check response actions for asymmetric bearer configurations	5.0.0	5.1.0
	RP-16	RP-020336	1495		Corrections to cell update interactions with security and SRNS Relocation	5.0.0	5.1.0
	RP-16	RP-020336	1498		"Out of service" area definition	5.0.0	5.1.0
	RP-16	RP-020339	1473		RRC connection release procedure in CELL_DCH state	5.0.0	5.1.0
	RP-16	RP-020339	1475		Correction to DL TM DCCH TF size for Default Configurations	5.0.0	5.1.0
	RP-16	RP-020339	1477		Corrections in ASN.1 related to SRNS relocation	5.0.0	5.1.0
	RP-16	RP-020341	1499		HS-DSCH related corrections	5.0.0	5.1.0
	RP-16	RP-020341	1500		Removal of BLER threshold from IE "Measurement Feedback info"	5.0.0	5.1.0
	RP-16	RP-020345	1501		RFC 3095 context relocation	5.0.0	5.1.0
09/2002	RP-17	RP-020541	1504	1	UE behaviour when active set cells are not included in CELL_INFO_LIST	5.1.0	5.2.0
	RP-17	RP-020541	1507	1	Corrections to handling of IE "Cells for measurement"	5.1.0	5.2.0
	RP-17	RP-020541	1510		Clarification on the use of UE radio access capability extensions within the INTER RAT HANDOVER INFO message	5.1.0	5.2.0
	RP-17	RP-020541	1513		Correction to RRC connection procedure	5.1.0	5.2.0
	RP-17	RP-020541	1516		Correction to the variable TGPS_IDENTITY	5.1.0	5.2.0
	RP-17	RP-020541	1522		Missing IEs in RLC info	5.1.0	5.2.0
	RP-17	RP-020542	1528	1	Corrections of UE internal measurement reporting events	5.1.0	5.2.0
	RP-17	RP-020542	1531	2	UE behaviour upon reception of reconfiguration	5.1.0	5.2.0
	RP-17	RP-020542	1534		Application of integrity keys in case of a pending CN domain switch during a SRNS relocation	5.1.0	5.2.0
	RP-17	RP-020542	1537	1	Clarifications on Quality Measurements	5.1.0	5.2.0
	RP-17	RP-020542	1540		Correction of DPCH constant value in TDD default radio configurations	5.1.0	5.2.0

Change history								
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New	
	RP-17	RP-020542	1543		Handling of UE internal measurement information in broadcast	5.1.0	5.2.0	
	RP-17	RP-020543	1546		Observed time difference to GSM reporting indicator	5.1.0	5.2.0

	RP-32	RP-060368	2833	-	Clarification on MBMS Radio Bearer Release	7.0.0	7.1.0	
	RP-32	RP-060354	2835	-	Correction on E-DCH DL Scrambling Code	7.0.0	7.1.0	
	RP-32	RP-060366	2837	-	Reinstatement of missing IE "Periodical reporting information-1b" in ASN.1	7.0.0	7.1.0	
	RP-32	RP-060366	2839	-	SRB2 suspension	7.0.0	7.1.0	
	RP-32	RP-060369	2842	-	Release 7 Timing Advance (3.84 Mcps and 7.68 Mcps TDD)	7.0.0	7.1.0	
	RP-32	RP-060369	2843	-	Introduction of REL-7 access stratum release indicator	7.0.0	7.1.0	
	RP-32	RP-060369	2844	-	Positioning velocity ASN.1	7.0.0	7.1.0	
	RP-32	RP-060386	2845	1	Correction of positioning confidence reporting inconsistencies	7.0.0	7.1.0	
09/2006	RP-33	RP-060573	2848	-	Removal of CID indication in PDCP PID	7.1.0	7.2.0	
	RP-33	RP-060574	2852	-	Correction to the tabulars for Serving Grant value	7.1.0	7.2.0	
	RP-33	RP-060575	2854	-	Range of the encoding of E-DCH physical layer category and HS-DSCH physical layer category	7.1.0	7.2.0	
	RP-33	RP-060574	2856	-	3-index step 2-index step clarifications	7.1.0	7.2.0	
	RP-33	RP-060597	2858	2	Introduction of SIB 11bis	7.1.0	7.2.0	
	RP-33	RP-060581	2859	-	Power class for UMTS2600 (VII) internal / 900 (VIII)	7.1.0	7.2.0	
	RP-33	RP-060576	2861	-	Corrections to MBMS Downlink Timeslots and Codes for TDD	7.1.0	7.2.0	
	RP-33	RP-060576	2865	-	Clarification on MBMS notification for UEs in CELL_DCH state	7.1.0	7.2.0	
	RP-33	RP-060576	2867	-	Clarification on MBMS p-t-m activation time IE	7.1.0	7.2.0	
	RP-33	RP-060576	2869	-	Access probability factor	7.1.0	7.2.0	
	RP-33	RP-060575	2871	-	Modification to the HS-SCCH set configuration method in RRC spec for 1.28Mcps TDD	7.1.0	7.2.0	
	RP-33	RP-060575	2873	-	Correction to tabular for IE 'Delay restriction Flag'	7.1.0	7.2.0	
	RP-33	RP-060575	2877	-	Correction on 3G-2G Handover	7.1.0	7.2.0	
	RP-33	RP-060575	2879	-	Pending security configuration for SRB2	7.1.0	7.2.0	
	RP-33	RP-060593	2881	-	UE radio access capability for Single-band UE	7.1.0	7.2.0	
	RP-33	RP-060593	2883	-	Inter-RAT handover to UTRAN (HSPA)	7.1.0	7.2.0	
	RP-33	RP-060593	2885	-	Tabular & reference corrections	7.1.0	7.2.0	
	RP-33	RP-060593	2887	-	F-DPCH Tx Diversity	7.1.0	7.2.0	
	RP-33	RP-060593	2889	1	Expiration of RRC timer T314/T315 associated to CS/PS RABs	7.1.0	7.2.0	
	RP-33	RP-060583	2892	-	Clarification on Exceeding Variance in Traffic Volume Measurement	7.1.0	7.2.0	
	RP-33	RP-060573	2897	1	Use of CM_PATTERN_ACTIVATION_ABORTED	7.1.0	7.2.0	
	RP-33	RP-060573	2900	1	Corrections of procedures dealing with Hard Handover	7.1.0	7.2.0	
	RP-33	RP-060585	2901	-	Correction to spreading factors used for 7.68 Mcps TDD PRACH	7.1.0	7.2.0	
	RP-33	RP-060583	2902	-	Corrections to ASN.1 (3.84 Mcps and 7.68 Mcps TDD)	7.1.0	7.2.0	
	RP-33	RP-060586	2903	-	Introduction of 3.84 Mcps and 7.68 Mcps TDD E-DCH	7.1.0	7.2.0	
	RP-33	RP-060582	2904	-	Support of 2570 – 2620 MHz band for TDD	7.1.0	7.2.0	
	RP-33	RP-060593	2907	-	ASN1 correction on Inter-frequency RACH measurement reporting, backward compatible solution	7.1.0	7.2.0	
	RP-33	RP-060584	2908	-	CS Call type indication in CELL_FACH	7.1.0	7.2.0	
	RP-33	RP-060584	2910	1	UE behaviour in RRC Connection Re-establishment scenarios	7.1.0	7.2.0	
	RP-33	RP-060624	2911	2	Enhancing MBMS support for Mobile TV	7.1.0	7.2.0	
	RP-33	RP-060574	2913	-	E-DCH gain factor computation	7.1.0	7.2.0	
	RP-33	RP-060593	2915	-	Correction to default configuration #22	7.1.0	7.2.0	
	RP-33	RP-060622	2917	-	Correction to coding of PLCCH for 1.28Mcps TDD	7.1.0	7.2.0	
	RP-33	RP-060578	2919	-	MAC-hs reset	7.1.0	7.2.0	
12/2006	RP-34	RP-060722	2916	2	UE based OTDOA positioning in WCDMA cells with extended range	7.2.0	7.3.0	
	RP-34	RP-060717	2922	1	Correction on acceptable configurations for compression entities	7.2.0	7.3.0	
	RP-34	RP-060715	2923	-	Introduction of Band X (Extended UMTS 1.7/2.1 GHz) in 25.331	7.2.0	7.3.0	
	RP-34	RP-060716	2925	-	Grant and MAC-e/es headers for E-DCH and References	7.2.0	7.3.0	
	RP-34	RP-060804	2927	2	Correction to E-DCH reconfiguration	7.2.0	7.3.0	
	RP-34	RP-060718	2931	-	Removal of MSCH configuration information from S-CCPCH system information	7.2.0	7.3.0	
	RP-34	RP-060718	2933	-	Correction relating to the formation of a list of services	7.2.0	7.3.0	
	RP-34	RP-060718	2935	-	Indentation error in handling MBMS establishment cause values	7.2.0	7.3.0	
	RP-34	RP-060718	2936	-	MSCH configuration information	7.2.0	7.3.0	
	RP-34	RP-060719	2938	-	Tabular/ASN.1 mismatch for IE "UE radio access capability comp 2"	7.2.0	7.3.0	
	RP-34	RP-060716	2940	-	Correction to Radio Bearer Mapping for UE in CELL_DCH state	7.2.0	7.3.0	
	RP-34	RP-060726	2941	1	State transition diagram from URA_PCH/Cell_PCH to idle	7.2.0	7.3.0	
	RP-34	RP-060719	2943	-	Usage of Band Indicator in Inter-RAT cell info list	7.2.0	7.3.0	

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
	RP-34	RP-060716	2945	-	Correction for support of HS-DSCH in RRC Connection Setup	7.2.0	7.3.0
	RP-34	RP-060720	2947	-	Corrections related to 3.84 and 7.68 Mcps TDD E-DCH and the support of TDD at 2.6 GHz	7.2.0	7.3.0
	RP-34	RP-060712	2948	1	Introduction of the UE speed information at the CELL_DCH transition	7.2.0	7.3.0
	RP-34	RP-060713	2949	2	Introduction of the new security algorithms UEA2 and UIA2.	7.2.0	7.3.0
	RP-34	RP-060718	2951	-	RAB ID for mobile TV	7.2.0	7.3.0
	RP-34	RP-060718	2953	-	MBMS PL Service Restriction Information and preferred frequency layer	7.2.0	7.3.0
	RP-34	RP-060724	2954	2	Introduction of inter-RAT DTM Handover	7.2.0	7.3.0
	RP-34	RP-060718	2956	-	MBMS short transmission ID and Mobile TV	7.2.0	7.3.0
03/2007	RP-35	RP-070159	2957	2	Deferred SIB11/12 reading and acting	7.3.0	7.4.0
	RP-35	RP-070159	2958	-	UE Positioning Fine Time Assistance for GPS	7.3.0	7.4.0
	RP-35	RP-070159	2959	-	Correction of "Threshold SFN-GPS TOW"	7.3.0	7.4.0
	RP-35	RP-070159	2960	1	Correction to standalone UE positioning	7.3.0	7.4.0
	RP-35	RP-070159	2961	-	Clarification on introduction of the new security algorithms	7.3.0	7.4.0
	RP-35	RP-070159	2962	-	Change to area scope of SIB1 value tag	7.3.0	7.4.0
	RP-35	RP-070159	2963	-	Correction of the tabular description of the IE Downlink information for each radio link Post	7.3.0	7.4.0
	RP-35	RP-070159	2964	-	Removal of redundant ASN1 element DL-CCTrChTPCList	7.3.0	7.4.0
	RP-35	RP-070151	2966	-	Correction of MBMS MODIFICATION REQUEST	7.3.0	7.4.0
	RP-35	RP-070151	2968	-	Wording of MBMS PL Service Restriction Information and preferred frequency layer	7.3.0	7.4.0
	RP-35	RP-070151	2970	-	maxMBMS-Services definition	7.3.0	7.4.0
	RP-35	RP-070151	2972	1	MBMS selected services indication	7.3.0	7.4.0
	RP-35	RP-070151	2973	1	Correction of RAB release procedure for Mobile TV	7.3.0	7.4.0
	RP-35	RP-070153	2975	-	Tabular Alignment for Uplink DPCH Info	7.3.0	7.4.0
	RP-35	RP-070151	2977	1	Update the IE 'RAB information to reconfigure' for Mobile TV	7.3.0	7.4.0
	RP-35	RP-070154	2979	-	Absence of MS Classmark 2 and 3 in IE "Inter-RAT UE radio access capability"	7.3.0	7.4.0
	RP-35	RP-070153	2981	-	Handling of TFCS with no DCH configured	7.3.0	7.4.0
	RP-35	RP-070163	2983	1	Introducing 64QAM downlink support	7.3.0	7.4.0
	RP-35	RP-070157	2984	-	Introduction of 1.28 Mcps TDD E-DCH	7.3.0	7.4.0
	RP-35	RP-070161	2985	1	Introducing MIMO in RRC specification	7.3.0	7.4.0
	RP-35	RP-070172	2986	-	Alignment of Tabular with ASN.1	7.3.0	7.4.0
	RP-35	RP-070160	2987	-	Corrections to Tabular for 3.84 and 7.68 McpsTDD E-DCH	7.3.0	7.4.0
	RP-35	RP-070151	2989	1	MICH reception for services scheduled with MSCH	7.3.0	7.4.0
	RP-35	RP-070158	2990	-	Introduction of DTX-DRX and HS-SCCH less in RRC	7.3.0	7.4.0
06/2007	RP-36	RP-070402	2982	6	Introducing 16QAM uplink support	7.4.0	7.5.0
	RP-36	RP-070407	2992	-	Use of Integrity protection algorithm UIA/2: removal of a 'shall' in a note	7.4.0	7.5.0
	RP-36	RP-070407	2993	-	RRC Cellid encoding alignment on RANAP	7.4.0	7.5.0
	RP-36	RP-070407	2994	-	Signalling connection release at T314/315 expiry	7.4.0	7.5.0
	RP-36	RP-070408	2995	-	Cell Update Confirm with RLC re-establish indicator	7.4.0	7.5.0
	RP-36	RP-070408	2996	-	Correction of STTD Indicator for F-DPCH Tx Diversity	7.4.0	7.5.0
	RP-36	RP-070395	2997	-	Introduction of GAN PS handover	7.4.0	7.5.0
	RP-36	RP-070408	2998	-	Feature Clean Up leftover: Removal of DRAC leftover	7.4.0	7.5.0
	RP-36	RP-070408	2999	-	Initialisation of CFN calculation for CELL_FACH	7.4.0	7.5.0
	RP-36	RP-070408	3000	-	PLMN selection ping-pong control	7.4.0	7.5.0
	RP-36	RP-070408	3001	-	Optimization of switching between MBMS broadcast TV channels transmitted on ptp bearers (MBMS for Mobile TV)	7.4.0	7.5.0
	RP-36	RP-070408	3002	-	Alignment of tabular to ASN.1 for SIB11/SIB12 and event 1J	7.4.0	7.5.0
	RP-36	RP-070403	3003	2	Introduction of HS-DSCH reception in CELL_FACH, URA_PCH and CELL_PCH	7.4.0	7.5.0
	RP-36	RP-070408	3004	1	Introduction two DRX schemes in URA_PCH and CELL_PCH	7.4.0	7.5.0
	RP-36	RP-070416	3008	-	Maintenance of PMM connection for MBMS PTP reception	7.4.0	7.5.0
	RP-36	RP-070401	3010	-	Content of MSI message when sent on DCCH	7.4.0	7.5.0
	RP-36	RP-070401	3012	-	Relative ordering of MBMS Selected Services when indicated to the network	7.4.0	7.5.0
	RP-36	RP-070416	3013	-	Background scan during MBMS PTM reception	7.4.0	7.5.0
	RP-36	RP-070401	3015	-	Default MBMS activation time and 'MBMS all unmodified p-t-m services'	7.4.0	7.5.0
	RP-36	RP-070401	3017	-	Problem with the IE 'MBMS service identity' included in the IE	7.4.0	7.5.0

	RP-45	RP-090918	3761	-	Correction regarding SRVCC	8.7.0	8.8.0
	RP-45	RP-090906	3762	1	Clarification on key mapping and storing after successful handover from EUTRAN	8.7.0	8.8.0
	RP-45	RP-090899	3764	2	Making features "Two DRX schemes in URA_PCH and CELL_PCH" and "E-DPDCH power interpolation formula" optional	8.7.0	8.8.0
	RP-45	RP-090917	3765	-	Clarification that DDI is not used with mac-i/is configuration	8.7.0	8.8.0
	RP-45	RP-090916	3769	-	CS voice over HSPA UE capability in RRC CONNECTION REQUEST	8.7.0	8.8.0
	RP-45	RP-090920	3776	-	Corrections to the CONTROL_CHANNEL_DRX_STATUS of 1.28Mcps TDD	8.7.0	8.8.0
	RP-45	RP-090903	3778	-	Clarification on the Power Resource Related Information of 1.28Mcps TDD	8.7.0	8.8.0
	RP-45	RP-090903	3780	-	Clarification on the configuration of T-SI-NST for 1.28Mcps TDD	8.7.0	8.8.0
	RP-45	RP-090910	3781	-	Clarification on fach measurement occasion for 1.28Mcps TDD	8.7.0	8.8.0
	RP-45	RP-090917	3785	-	Clarification on Scheduling Information transmission	8.7.0	8.8.0
	RP-45	RP-090920	3788	-	Clarification on the number of RxTx Pattern of SPS operation for 1.28Mcps TDD	8.7.0	8.8.0
	RP-45	RP-090909	3792	1	25.331 on Addition of LCR TDD R8 extend capability info in Inter-RAT Handover info	8.7.0	8.8.0

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
	RP-45	RP-090909	3800	-	Missing RRC messages in RRC procedure performance values section	8.7.0	8.8.0
	RP-45	RP-090900	3803	-	Clarification on Inter-frequency RACH reporting quantity for TDD	8.7.0	8.8.0
	RP-45	RP-090900	3807	-	E-AGCH channel and E_RNTI variable corrections	8.7.0	8.8.0
	RP-45	RP-090874	3810	4	Making features "Absolute priority reselection to GERAN", "Absolute priority reselection to UTRA inter-frequency" and "Improved EUL power control" optional	8.7.0	8.8.0
	RP-45	RP-090901	3813	-	Enhancing the Category Handling in UMTS	8.7.0	8.8.0
	RP-45	RP-090902	3814	-	Making the bit of feature "UEA2/UIA2" reformulated	8.7.0	8.8.0
	RP-45	RP-090900	3816	-	RLC Size - SizeInfoType2 correction	8.7.0	8.8.0
12/2009	RP-46	RP-091307	3819	-	Adding missing reference for HS_SCCH_LESS_STATUS variable	8.8.0	8.9.0
	RP-46	RP-091306	3823	-	Clarification on deferred measurement control reading	8.8.0	8.9.0
	RP-46	RP-091321	3825	1	Clarification for initial SPS Tx pattern parameter for 1.28Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091327	3830	2	Clarification of common E-DCH mac-d flow for CCCH transmission	8.8.0	8.9.0
	RP-46	RP-091310	3833	1	Clarification of Power Offset for Scheduling Info for 1.28Mcps TDD (change 1)	8.8.0	8.9.0
	RP-46	RP-091310	3835	1	Clarification of Power Offset for Scheduling Info for 1.28Mcps TDD (change 2)	8.8.0	8.9.0
	RP-46	RP-091325	3840	-	Clarification on the configuration of TX diversity mode on DPCH in DC-HSDPA	8.8.0	8.9.0
	RP-46	RP-091325	3842	-	Clarification to the number of HARQ processes in DC-HSDPA	8.8.0	8.9.0
	RP-46	RP-091318	3843	-	Correction of nesting levels greater 15 in ASN.1 IE definitions	8.8.0	8.9.0
	RP-46	RP-091324	3845	1	Correction of number of NI per frame for 3.84 Mcps TDD MBSFN IMB	8.8.0	8.9.0
	RP-46	RP-091314	3847	1	Correction of the UE behaviour after RRC connection Reject with redirection to EUTRA	8.8.0	8.9.0
	RP-46	RP-091377	3849	2	One correction to ASN1 of enhanced CELL_FACH state for LCR TDD	8.8.0	8.9.0
	RP-46	RP-091312	3855	1	MAC-es/e reset when 16QAM operation starts or stops(REL-8)	8.8.0	8.9.0
	RP-46	RP-091315	3857	-	Making features 'Absolute priority reselection to GERAN', 'Absolute priority reselection to UTRA inter-frequency' optional (Option1)	8.8.0	8.9.0
	RP-46	RP-091321	3861	-	Correction on Control Channel DRX description in CELL_DCH state for 1.28Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091321	3863	-	Clarification of the actions related to HS_DSCH_RECEPTION variable for 1.28Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091306	3867	-	Corrections to the Frequency quality estimate in 1.28Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091317	3871	-	Inconsistency between tabular and ASN.1 for Adjacent Frequency measurements without compressed mode	8.8.0	8.9.0
	RP-46	RP-091305	3878	1	UE behaviour upon a removal of the serving HS-DSCH/E-DCH radio link	8.8.0	8.9.0
	RP-46	RP-091305	3882	-	Maximum Power Reduction (MPR) and event 6D reporting	8.8.0	8.9.0
	RP-46	RP-091308	3885	1	RRC Signaling of S-CPICH power offset for MIMO UEs	8.8.0	8.9.0
	RP-46	RP-091325	3889	-	Clarification of the definition of the multicell support	8.8.0	8.9.0
	RP-46	RP-091317	3893	-	Clarification on the UE state after fast dormancy request	8.8.0	8.9.0
	RP-46	RP-091327	3897	-	Clarification on the transmission of MAC-c PDUs (R8)	8.8.0	8.9.0
	RP-46	RP-091325	3903	-	HARQ memory partitioning configuration for DC-HSDPA	8.8.0	8.9.0
	RP-46	RP-091306	3919	2	Modification of inter RAT handover info for 1.28 Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091322	3921	-	Correction to MEASUREMENT CONTROL reception in enhanced CELL_FACH for 1.28 Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091322	3923	-	Clarification of PICH selection scheme for 1.28 Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091321	3927	-	Correction to CPC operation for 1.28 Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091258	3929	1	Synchronization detection window configuration in CPC for 1.28 Mcps TDD	8.8.0	8.9.0
	RP-46	RP-091320	3936	1	UE support for E-UTRAN measurements and reporting in connected mode	8.8.0	8.9.0
	RP-46	RP-091308	3946	1	Optional support of Tx diversity on DL control channels for MIMO capable UEs	8.8.0	8.9.0
	RP-46	RP-091325	3947	-	Searching on the adjacent cell without the need for compressed mode - Rel 8	8.8.0	8.9.0
	RP-46	RP-091259	3955	1	Carrier-specific STTD configuration for DC-HSDPA	8.8.0	8.9.0
	RP-46	RP-091314	3959	1	Correction to UE behaviour after handover to UTRAN from EUTRAN or GERAN	8.8.0	8.9.0
	RP-46	RP-091329	3965	-	Clarification that a configuration with RB mapping options for flexible RLC PDU size and mac-es/e is invalid	8.8.0	8.9.0

	RP-52	RP-110826	4604	-	Handling of START value due to an RLC reestablishment when DL RLC PDU size is reconfigured from fixed to flexible with 15-bit LI	8.14.0	8.15.0
	RP-52	RP-110826	4624	-	Clarification to the number of HARQ processes in HSDPA when switching between MIMO and non-MIMO	8.14.0	8.15.0
	RP-52	RP-110829	4630	-	Reconfiguration messages and HS-SSCH orders interaction for DC-HSDPA	8.14.0	8.15.0
	RP-52	RP-110825	4640	-	Corrections to the selection of RB multiplexing option	8.14.0	8.15.0
	RP-52	RP-110829	4647	1	Correction of actions related to TARGET_CELL_RECONFIGURATION variable	8.14.0	8.15.0
	RP-52	RP-110829	4650	1	Clearance of the stored frequency info for measure without CM	8.14.0	8.15.0
	RP-52	RP-110829	4655	1	Correction to SIB5 5bis and SIB6 handle for Enhanced Uplink	8.14.0	8.15.0
	RP-52	RP-110828	4659	1	Corrections to detection of E-UTRA cell	8.14.0	8.15.0
	RP-52	RP-110827	4664	2	Informative note of UE behaviour when change of the value of Use special value of HE field without downlink RLC entity re-establishment	8.14.0	8.15.0
	RP-52	RP-110829	4672	1	Correction to the physical channel failure in CELL_UPDATE CONFIRM for 1.28Mcps TDD	8.14.0	8.15.0
09/2011	RP-53	RP-111274	4729	2	Clarification on Uplink DPCH power control info for Common E-DCH	8.15.0	8.16.0
	RP-53	RP-111276	4765	-	Disabling default configuration 17,23 in Handover To UTRAN Command	8.15.0	8.16.0
	RP-53	RP-111274	4773	-	Use of New E-RNTI in UMI message	8.15.0	8.16.0
	RP-53	RP-111274	4780	2	PPAC corrections	8.15.0	8.16.0
	RP-53	RP-111274	4783	1	Correction to the SPS resource configuration for 1.28Mcps TDD	8.15.0	8.16.0
	RP-53	RP-111277	4800	-	UE Fast dormancy upon RRC Connection Release	8.15.0	8.16.0
12/2011	RP-54	RP-111708	4806	-	Correction on the measurement configuration validation for SFN reading	8.16.0	8.17.0
	RP-54	RP-111706	4810	-	Corrections of PS keys handling upon PS ISHO	8.16.0	8.17.0
	RP-54	RP-111701	4820	-	Correction to Default Radio Configurations for TDD: invalidation of identities 0, 1, 5, 6, 7, 22	8.16.0	8.17.0
	RP-54	RP-111703	4862	2	Clarification to the handling of HS-DSCH TB size table	8.16.0	8.17.0
	RP-54	RP-111704	4871	1	Correction of BCCH mapping on HS-DSCH	8.16.0	8.17.0
03/2012	RP-55	RP-120320	4918	2	Clarification on stored HARQ info when HS-DSCH reception is not supported	8.17.0	8.18.0
	RP-55	RP-120320	4932	-	Clarifications of the UE behaviours when initiating a cell update procedure	8.17.0	8.18.0
	RP-55	RP-120322	4950	-	Disabling of default radio configurations in CELL_FACH in Rel-8	8.17.0	8.18.0
06/2012	RP-56	RP-120803	4956	-	Reconfiguration messages and HS-SCCH orders interaction for HS-SCCH less	8.18.0	8.19.0
	RP-56	RP-120806	4964	-	Corrections regarding the UE behaviour on evaluating the variable HSPA_RNTI_STORED_CELL_PCH	8.18.0	8.19.0
	RP-56	RP-120806	4968	-	Clarifications of the UE behaviours when initiating a cell update procedure for 1.28Mcps TDD	8.18.0	8.19.0
	RP-56	RP-120806	4972	-	Corrections on DSAC and PPAC	8.18.0	8.19.0
09/2012	RP-57	RP-121357	5117	-	Invalidation of default configuration #23	8.19.0	8.20.0
	RP-57	RP-121368	5184	-	Introduction of absolute priority based measurements and reselection in CELL_FACH State in 25.331	8.19.0	8.20.0

NOTE: CR3785 "Clarification on Scheduling Information transmission" for TS 25.331 v8.7.0 of RP-090917 which was approved by RAN #45 could not be implemented as it is actually a CR to 25.321 v8.6.0.
