

ETSI TS 129 282 V8.0.0 (2009-04)

Technical Specification

**Universal Mobile Telecommunications System (UMTS);
LTE;
Mobile IPv6 vendor specific option format
and usage within 3GPP
(3GPP TS 29.282 version 8.0.0 Release 8)**

Reference

DTS/TSGC-0429282v800

Important notice

Individual copies of the present document can be downloaded from:

<http://www.etsi.org>

The present document may be made available in more than one electronic version or in print. In any case of existing or perceived difference in contents between such versions, the reference version is the Portable Document Format (PDF). In case of dispute, the reference shall be the printing on ETSI printers of the PDF version kept on a specific network drive within ETSI Secretariat.

Users of the present document should be aware that the document may be subject to revision or change of status. Information on the current status of this and other ETSI documents is available at

<http://portal.etsi.org/tb/status/status.asp>

If you find errors in the present document, please send your comment to one of the following services:

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the format and usage of the Mobile IPv6 Vendor Specific Option [2] within the Third Generation Partnership Project.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

4 3GPP Mobile IPv6 Option

4.1 General

The 3GPP Mobile IPv6 Option is a Mobile IPv6 Vendor-Specific Option as defined by IETF RFC 5094 [2] using the Vendor-Id assigned to 3GPP. The 3GPP Mobile IPv6 Option is used to encode 3GPP Specific Information Elements within the protocols based on Mobile IPv6 (MIPv6) as defined by IETF RFC 3775 [4], such as the Dual Stack Mobile IPv6 (DSMIPv6) and Proxy Mobile IPv6 (PMIPv6) protocols respectively defined by IETF Draft draft-ietf-mext-nemo-v4traversal [5] and IETF RFC 5213 [6].

4.2 Format

The format of the 3GPP Mobile IPv6 Option is shown in table 4.2-1. The defined 3GPP Specific Information Elements are listed in table 4.2-2. The data format of a given 3GPP Specific Information Element (IE) is defined in the specification defining its usage, as indicated in table 4.2-2.

Octets	Bits						
	8	7	6	5	4	3	2
1	Type						
2	Length						
3	Vendor Id (1 st Octet)						
4	Vendor Id (2 nd Octet)						
5	Vendor Id (3 rd Octet)						
6	Vendor Id (4 th Octet)						
7	Sub-Type						
8	Reserved						M
9-n	3GPP Specific IE Data Fragment						

Figure 4.2-1: 3GPP Mobile IPv6 Option

Table 4.2-1: Fields in a 3GPP Mobile IPv6 Option

Field	Content	Reference
Type	Value is decimal 19 the assigned value for the Vendor-Specific mobility option	RFC 5094 [2]
Length	An 8-bit field indicating the length of the option in octets excluding the Type and the Length fields. All other fields are included.	RFC 5094 [2]
Vendor ID	A 32-bit field. Value is set to the SMI Network Management Private Enterprise Number for 3GPP, which is decimal "10415".	IANA [3]
Sub-Type	Indicate the type of the 3GPP Specific Information Element encoded by the 3GPP Mobile IPv6 Option.	RFC 5094 [2]
Reserved	Value set to zero by sender and ignored by receiver.	Defined here
More 3GPP Specific IE Data Fragment (M) Flag	Value set to "1" if this instance of the 3GPP Mobile IPv6 Option is followed by another 3GPP Mobile IPv6 Option encoding the follow up 3GPP Specific IE data fragment that does not fit in this instance of the 3GPP Mobile IPv6 Option. Set to zero otherwise.	Defined here
3GPP Specific IE Data Fragment	The 3GPP Specific IE might be split over multiple 3GPP Mobile IPv6 Options in case the total length of the 3GPP Specific Information Element exceeds 248 bytes. This is the data fragment of the 3GPP Specific IE contained in this instance of the 3GPP Mobile IPv6 Option. The data fragment has a maximum length of 248 bytes.	Defined here

Table 4.2-2: Subtypes for 3GPP specific Information Elements

3GPP-specific IE Subtype	3GPP-specific Information Element	Reference
1	Protocol Configuration Options.	3GPP TS 29.275 [7]
2	3GPP Specific PMIPv6 Error Code.	3GPP TS 29.275 [7]
3	PMIPv6 PDN GW IP Address.	3GPP TS 29.275 [7]
4	PMIPv6 DHCPv4 Address Allocation Procedure Indication.	3GPP TS 29.275 [7]
5	PMIPv6 Connection Set Identifier List.	3GPP TS 29.275 [7]
6	PMIPv6 PDN type indication.	3GPP TS 29.275 [7]
7	Charging ID	3GPP TS 29.275 [7]
8	Selection Mode	3GPP TS 29.275 [7]
9	I-WLAN Mobility Access Point Name (APN).	3GPP TS 24.327 [8]
