GSM® and the GSM logo are Trade Marks registered and owned by the GSM Association.

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://ipr.etsi.org).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "may not", "need", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

This 3GPP Technical Specification (TS) specifies:

- 1. The interactions between the HSS (Home Subscriber Server) and the SIP AS (Application Server) and between the HSS and the OSA SCS (Service Capability Server). This interface is referred to as the Sh reference point.
- 2. The interactions between the SIP AS and the SLF (Subscription Locator Function) and between the OSA SCS and the SLF. This interface is referred to as the Dh reference point.

The IP Multimedia (IM) Core Network Subsystem stage 2 is specified in 3GPP TS 23.228 [1] and the signalling flows for the IP multimedia call control based on SIP and SDP are specified in 3GPP TS 24.228 [2].

The IP Multimedia (IM) Session Handling with the IP Multimedia (IM) call model is specified in 3GPP TS 23.218 [4].

This document addresses the signalling flows and message contents for the protocol at the Sh and Dh interface.

This document also addresses how the functionality of Ph interface is accomplished.

The Presence Service Stage 2 description (architecture and functional solution) is specified in 3GPP TS 23.141 [18].

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply.

IP Multimedia session: IP Multimedia session and IP Multimedia call are treated as equivalent in this specification.

Transparent data: Data that is understood syntactically but not semantically by the HSS. It is data that an AS may store in the HSS to support its service logic. One example is data that an AS stores in the HSS, using it as a repository.

Non-transparent data: Data that is understood both syntactically and semantically by the HSS.

AS (**Application Server**): a term used to denote either of a SIP Application Server or an OSA Service Capability Server.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AS Application Server Conditional

CSCF Call Session Control Function CSG Closed Subscriber Group

GIBA GPRS-IMS-Bundled-Authentication

C Conditional

HSS Home Subscriber Server
IE Information Element
IP Internet Protocol
IM IP Multimedia

IMS IP Multimedia Subsystem

M Mandatory
O Optional

SIP Session Initiation Protocol SLF Subscription Locator Function

S-CSCF Serving CSCF

4 Main Concept

This document presents the Sh interface related functional requirements of the communicating entities.

It gives a functional classification of the procedures and describes the procedures and message parameters.

Error handling flows, protocol version identification, etc. procedures are also included.

5 General Architecture

This section further specifies the architectural assumptions associated with the Sh reference point, building on 3GPP TS 23.228 [1], 3GPP TS 23.218 [4] and also the Ph reference point building upon 3GPP TS 23.141 [18].

5.1 Functional requirements of network entities

5.1.1 Functional Requirements of the Application Server

The Application Server may communicate with the HSS over the Sh interface.

For functionality of the Application Server refer to 3GPP TS 23.002 [3], 3GPP TS 23.228 [1] and 3GPP TS 23.218 [4].

5.1.2 Functional requirements of HSS

The HSS may communicate with the Application Server over the Sh interface and with the Presence Network Agent over the Ph interface. The functionality of the Ph interface shall be the same as the functionality of the Sh interface.

For functionality of the HSS refer to 3GPP TS 23.002 [3], 3GPP TS 23.228 [1] and 3GPP TS 23.218 [4].

5.1.3 Functional Requirements of the Presence Network Agent

The Presence Network Agent may communicate with the HSS over the Ph interface. In this case, all references to an Application Server in this specification apply also to a Presence Network Agent.

5.2 Functional classification of Sh interface procedures

Operations on the Sh interface are classified in functional groups:

- 1. Data handling procedures
 - The download of data from the HSS to an AS.
 - The update of data in the HSS.
- 2. Subscription/notification procedures
 - An AS can subscribe to receive notifications from the HSS of changes in data.
 - The HSS can notify an AS of changes in data for which the AS previously had subscribed.

6 Procedure Descriptions

In the tables that describe the Information Elements transported by each command, each Information Element is marked as (M) Mandatory, (C) Conditional or (O) Optional.

- A mandatory Information Element (marked as (M) in the table) shall always be present in the command. If this Information Element is absent, an application error occurs at the receiver and an answer message shall be sent back to the originator of the request with the Result-Code set to DIAMETER_MISSING_AVP. This message shall also include a Failed-AVP AVP containing the missing Information Element i.e. the corresponding Diameter AVP defined by the AVP Code and the other fields set as expected for this Information Element.
- A conditional Information Element (marked as (C) in the table) shall be present in the command if certain conditions are fulfilled.
 - If the receiver detects that those conditions are fulfilled and the Information Element is absent, an application error occurs and an answer message shall be sent back to the originator of the request with the Result-Code set to DIAMETER_MISSING_AVP. This message shall also include a Failed-AVP AVP containing the missing Information Element i.e. the corresponding Diameter AVP defined by the AVP Code and the other fields set as expected for this Information Element.
 - If those conditions are not fulfilled, the Information Element shall be absent. If however this Information Element appears in the message, it shall not cause an application error and it may be ignored by the receiver if this is not explicitly defined as an error case. Otherwise, an application error occurs at the receiver and an answer message with the Result-Code set to DIAMETER_AVP_NOT_ALLOWED shall be sent back to the originator of the request. A Failed-AVP AVP containing a copy of the corresponding Diameter AVP shall be included in this message.
- An optional Information Element (marked as (O) in the table) may be present or absent in the command, at the discretion of the application at the sending entity. Absence or presence of this Information Element shall not cause an application error and may be ignored by the receiver.

When a procedure is required to determine the Public Identity used for an identity lookup in HSS and SLF, the HSS and SLF shall derive the Public Identity from the SIP URI or Tel URI contained in the Public-Identity AVP, if not already in canonical form as per 3GPP TS 23.003 [11], as described below:

- If the Public-Identity AVP contains a SIP URI, the HSS and SLF shall follow rules for conversion of SIP URI into canonical form as specified in IETF RFC 3261 [16] chapter 10.3.
- If the Public-Identity AVP contains a Tel URI in E.164 format, the HSS and SLF shall remove visual separators and remove all URI parameters.

When a command contains a ServiceData XML element with or without content (i.e. <ServiceData></ ServiceData>), the Service Data element is defined as present in the sub-clauses 6.1 to 6.4.

Unknown permanent failure error codes shall be treated in the same way as DIAMETER_UNABLE_TO_COMPLY. For unknown transient failure error codes the request may be repeated, or handled in the same way as DIAMETER_UNABLE_TO_COMPLY.

6.1 User data handling procedures

6.1.1 Data read (Sh-Pull)

This procedure is used between the AS and the HSS. The procedure is invoked by the AS and is used:

- To read transparent and/or non-transparent data for a specified user from the HSS.

This procedure is mapped to the commands User-Data-Request/Answer in the Diameter application specified in 3GPP TS 29.329 [5]. Tables 6.1.1.1 and 6.1.1.2 detail the involved information elements.

Table 6.1.1.1: Sh-Pull

Information element name	Mapping to Diameter AVP	Cat.	Description
User Identity (See 7.1)	User-Identity	M	IMS Public User Identity, Public Service Identity, or MSISDN of the user for whom the data is required. See section 7.1 for the content of this AVP.
Wildcarded PSI (See 7.1A)	Wildcarded- Public- Identity	0	If the request refers to a Wildcarded PSI, the AS may include the corresponding Wildcarded PSI in this information element.
			If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public Service Identity in the detailed behaviour refer to the Wildcarded PSI.
Wildcarded Public User Identity (See	Wildcarded- IMPU	0	If the request refers to a Wildcarded Public User Identity, the AS may include the corresponding Wildcarded Public User Identity in this information element.
7.1B)			If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public User Identity in the detailed behaviour refer to the Wildcarded Public User Identity.
Requested data (See 7.3)	Data- Reference	М	This information element indicates the reference to the requested information. The set of valid reference values are defined in 7.6.
Requested Identity set (See 7.11)	Identity-Set	0	If Data-Reference indicates that IMS Public Identities is the requested data set to be downloaded, this information element should be included.
,			When this information element takes the value IMPLICIT_IDENTITIES, the HSS shall provide all non-barred IMS Public Identities that belong to the same implicit registration set as the IMS Public Identity included in the message in the User-Identity AVP. The MSISDN user identity is not applicable for this value. If the User Identity is a Public Service Identity, the HSS shall return only the User Identity in the request.
			When this information element takes the value ALIAS_IDENTITIES, the HSS shall provide all non-barred IMS Public User Identities that are in the same Alias Public User Identity Set as the IMS Public User Identity included in the message in the User-Identity AVP (see 3GPP TS 23.008 [27] for the definition of Alias Public User Identity Set). The MSISDN user identity and the Public Service Identity are not applicable for this value.
			When this information element takes the value REGISTERED_IDENTITIES, the HSS shall provide all non-barred IMS Public Identities whose state is registered, belonging to all Private Identities that the IMS Public Identity or MSISDN in the User-Identity AVP is associated with. If the User Identity is a Public Service Identity, the HSS shall return no identities in the response.
			When this information element takes the value ALL_IDENTITIES, the HSS shall provide all non-barred IMS Public Identities, belonging to all Private Identities that the User Identity is associated with.
			If Data-Reference indicates that IMS Public Identities is the requested data set to be downloaded and this information element is not included, the HSS shall download the set of IMS Public Identities that would be downloaded if the value of this information element had been ALL_IDENTITIES.
Requested domain (See 7.2)	Requested- Domain	С	This information element indicates the domain to which the operation is applicable. Check table 7.6.1 to see when it is applicable.
Requested nodes (See 7.2A)	Requested- Nodes	0	This information element indicates the Node Types to which the operation is applicable. Check table 7.6.1 to see when it is applicable.
Current Location (See 7.8)	Current- Location	С	This information element indicates whether an active location retrieval has to be initiated or not. It shall be present if Location Information is requested. If this information element takes the value InitiateActiveLocationRetrieval (1) the HSS shall indicate to the MSC/VLR and/or SGSN and/or MME the need to initiate an active location retrieval. Check table 7.6.1 to see when it is applicable.

Service Indication (See 7. 4)	Service- Indication	С	IE that identifies, together with the User Identity included in the User-Identity AVP and Data-Reference, the set of service related transparent data that is being requested. Check table 7.6.1 to see when it is applicable.
Application Server Identity (See 7.9)	Origin-Host	M	IE that identifies the AS originator of the request and that is used to check the AS permission list.
Application Server Name (See 7.10)	Server-Name	С	IE that is used, together with the User Identity included in the User-Identity AVP and Data-Reference, as key to identify the filter criteria. Check table 7.6.1 to see when it is applicable.
DSAI Tag (See 7.14)	DSAI-Tag	С	IE that is used, together with the User Identity included in the User-Identity AVP and Data-Reference, as key to identify the instance of Dynamic Service Activation Info (DSAI) requested. Check table 7.6.1 to see when it is applicable.
Session Priority (see 7.15)	Session- Priority	0	This information element shall indicate the session's priority to the HSS. If it is not included, the request shall be treated as normal.
Private Identity (see 7.6.19)	User-Name	С	Private Identity of the user for whom the data is required. Check table 7.6.1 to see when it is applicable.
Serving Node Indication (See 7.2B)	Serving- Node- Indication	0	This information element shall indicate that only the serving node address/identity associated to the location data is required. Check table 7.6.1 to see when it is applicable.
Pre-paging Supported (See 7.18)	Pre-paging- Supported	0	This information element shall indicate whether the AS supports pre-paging or not. It indicates by its absence that the AS does not support pre-paging. For details see 3GPP TS 23.018 [10].
Local Time Zone Indication (See 7.19)	Local-Time- Zone- Indication	0	This information element shall indicate that the Local Time Zone is requested and shall indicate whether only the Local Time Zone is required or the Local Time Zone is required together with other location data.
UDR Flags (See 7.20)	UDR-Flags	0	Check table 7.6.1 to see when it is applicable. This Information Element contains a bit mask. See 7.x for the meaning of the bits.
Call-Reference- Info (See 7.21)	Call- Reference- Info	0	This Information Element contains a Call Reference Number and the AS- Number. May be present when Data Reference is CSRN. It allows a later retry of the call setup in the context of MTRR. See 3GPP TS 23.292 [33]

Table 6.1.1.2: Sh-Pull Resp

Information element name	Mapping to Diameter AVP	Cat.	Description
Result (See 7.5)	Result-Code / Experimental_Result	M	Result of the request. Result-Code AVP shall be used for errors defined in the Diameter Base Protocol. Experimental-Result AVP shall be used for Sh errors. This is a grouped AVP which contains the 3GPP Vendor ID in the Vendor-Id AVP, and the error code in the Experimental-Result-Code AVP.
Wildcarded PSI (See 7.1A)	Wildcarded-Public- Identity	0	If the request refers to a specific PSI matching a Wildcarded PSI and the Wildcarded PSI was not included in the request and is not included in the User-Data AVP, the HSS may include the corresponding Wildcarded PSI in this information element. This information may be used by the AS to identify the affected Wildcarded PSI.
Wildcarded Public User Identity (See 7.1B)	Wildcarded-IMPU	0	If the request refers to a Public User Identity matching a Wildcarded Public User Identity and the Wildcarded-IMPU AVP was not included in the request and is not included in the User-Data AVP, the HSS may include the corresponding Wildcarded Public User Identity in this information element. This information may be used by the AS to identify the affected Wildcarded Public User Identity.
Data (See 7.6)	User-Data	С	Requested data. This element shall be present if the requested data exists in the HSS and the AS has permissions to read it.

6.1.1.1 Detailed behaviour

The HSS may prioritise the received request message according to priority level received within the Session-Priority AVP.

The conditions for the inclusion of Requested-Domain and Requested-Node as an additional key to the requested data are described in table 7.6.1. If repository data is requested, Service-Indication shall be present in the request. If initial filter criteria are requested, the Server-Name AVP shall contain the SIP URL of the AS that initiates the request; requests for initial filter criteria are limited to those initial filter criteria which are relevant to the requesting AS. If DSAI information is requested, the DSAI-Tag AVP shall be present.

Upon reception of the Sh-Pull request, the HSS shall, in the following order:

- 1. In the AS permission list (see section 6.2) check that the requested user data is allowed to be read (Sh-Pull) by this AS by checking the combination of the identity of the AS sending the request (identified by the Origin-Host AVP) and the supplied Data-Reference.
 - If one or more Data References in the request are not allowed to be read, Experimental-Result shall be set to DIAMETER_ERROR_USER_DATA_CANNOT_BE_READ in the Sh-Pull Response.
- 2. Check that the User Identity for whom data is asked exists in HSS. If not, Experimental-Result shall be set to DIAMETER_ERROR_USER_UNKNOWN in the Sh-Pull Response.
- 2a. Check if the Private Identity (if received) corresponds to IMPU/MSISDN received in User-Identity. If not, Experimental-Result-Code shall be set to DIAMETER_ERROR_IDENTITIES_DONT_MATCH.
- 3. If the User Identity and the Private Identity (if present) do not apply to the Data-Reference indicated in the request according to Table 7.6.1, Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED in the Sh-Pull Response.
- 3a. If data-reference is IPAddressSecureBindingInformation (22) and the User Identity is an IMS Public User Identity that is shared between multiple Private User Identities, Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED in the Sh-Pull Response.
- 4. Check whether or not the data that is requested to be downloaded by the AS is currently being updated by another entity. If there is an update of the data in progress, the HSS may delay the Sh-Pull-Resp message until the update has been completed. The HSS shall ensure that the data returned is not corrupted by this conflict. If HSS is not able to delay the Sh-Pull-Resp message e.g. due to timeout the Experimental-Result-Code shall be set to DIAMETER USER DATA NOT AVAILABLE.
- 4a. If T-ADS Information is requested, the HSS shall take into account information possibly received from MME and/or SGSN during location update or notification procedure in order to decide whether MME and/or SGSN need to be contacted before a response is sent to the AS.
 - The HSS shall provide the most recent IMS Voice over PS Sessions support indication as indicated by the serving nodes. The HSS shall provide the RAT type, if available. The HSS may also provide the last UE activity time, if available. See Annex E.
 - If all serving nodes need to be contacted, and if at least one serving node does not support T-ADS Data Retrieval or did not successfully answer to the T-ADS request from the HSS, the HSS shall indicate that IMS Voice over PS Sessions support is unknown, i.e., the HSS shall not indicate support, or non-support, of IMS Voice over PS Sessions unless all registered serving nodes have provided indication of their support, or non-support, status.

If the HSS knows that one of the registered serving nodes is a Gn/Gp-SGSN, the HSS shall only contact the Gn/Gp-SGSN for T-ADS Data Retrieval if needed and shall provide the most recent IMS Voice over PS Sessions support indication as indicated by the Gn/Gp-SGSN. If the Gn/Gp-SGSN needs to be contacted and it does not support T-ADS Data Retrieval, the HSS shall indicate IMS Voice over PS Sessions support is unknown.

NOTE 1: If the UE is registered with both MME and SGSN, and the HSS knows that the SGSN is a Gn/Gp-SGSN, the HSS does not need to know if the MME supports IMS Voice over PS Sessions or not. The HSS can determine that the SGSN registered is a Gn/Gp-SGSN by different ways, e.g. by configuration, or according to the information (e.g. EPS Subscription Data Not Needed Indicator) received in MAP_UpdateGPRSLocation request.

- NOTE 2: If the UE is registered with both MME and SGSN, and the HSS is unable to know that the SGSN is a Gn/Gp-SGSN, the HSS will indicate IMS Voice over PS Sessions support as unknown if the MME does not support T-ADS Data Retrieval or did not successfully answer to the T-ADS request from the HSS, even if the Gn/Gp-SGSN indicated IMS Voice over PS Sessions is supported.
 - If the serving node answers successfully to the T-ADS data request, but it does not include any of the T-ADS Information Elements (IMS Voice over PS Sessions Supported, RAT Type and Last UE Activity Time), the HSS shall indicate IMS Voice over PS Sessions support is not supported, if the subscriber is not attached in another node that indicates support (if applicable).
 - If at least one serving node provided T-ADS data to the HSS, the HSS may also provide the received last UE activity time and RAT type. If all serving nodes successfully answer to the T-ADS request from the HSS, the HSS shall provide the most recent IMS Voice over PS Sessions support indication as indicated by the serving nodes.
- 4b. If CSRN is requested but roaming number retrieval from the MSC/VLR fails, the HSS shall include an empty CSRN element in the xml document returned to the AS. In addition, if MTRR is applicable (see 3GPP TS 23.018 [10]), the HSS shall set an MTRR-Indication in the xml document. See 3GPP TS 23.292 [33].
- 5. The HSS shall include the data pertinent to the requested Data Reference in the User-Data AVP and if the HSS supports the Notif-Eff feature, the HSS shall include the data pertinent to all the requested Data References in the User-Data AVP. The HSS shall set the Result-Code to DIAMETER_SUCCESS. This includes cases where the data is not available to the HSS. The pertinent data included shall refer to the received IMPU/MSISDN and Private Identity (if present).
- NOTE 3: Data referred to a Private Identity (e.g. IMS Private User Identity) implies that only the data (e.g. Location Information) specific for that Private Identity is included, regardless of the type of User Identity received (e.g. IMS Public User Identity shared by multiple IMS Private User Identities).

If both the AS and the HSS have determined via mutual feature evaluation to not support the Notif-Eff feature and in the case that requested data is not available to the HSS, the HSS shall not include the User-Data AVP in the Sh-Pull Response. If both the AS and the HSS support the Notif-Eff feature and none of the requested data is available to the HSS, the HSS shall not include the User-Data AVP in the Sh-Pull Response.

If both the AS and the HSS support the Notif-Eff feature and some of the requested data is not available to the HSS, it shall be indicated as follows.

- Empty repository data shall be indicated with the RepositoryData element that contains a Service Indication and a Sequence Number but does not contain a ServiceData element (i.e. ServiceData is not present).
- Unavailable Public Identifiers shall be indicated with an empty PublicIdentifiers element.
- Unavailable location information shall be indicated by an empty CSLocationInformation and/or an empty PSLocationInformation element.
- Unavailable CS-UserState shall be indicated by a missing CSUserState element.
- Unavailable PS-UserState shall be indicated by a missing PSUserState element.
- Unavailable elements of Sh IMS Data shall be indicated as follows.
 - An unavailable S-CSCF name shall be indicated with empty SCSCFName element.
 - An unavailable IP Address Secure Binding Information shall be indicated with empty IPv4address element or empty IPv6prefix element.
 - If all iFCs for the user that are relevant for the AS are unavailable it shall be indicated with empty IFCs element.
 - Not available UE SRVCC capability shall be indicated with missing UE-SRVCC-Capability element.
 - Not available STN-SR shall be indicated with empty STN-SR element.
 - Not available CSRN shall be indicated with empty CSRN element.
 - Not available IMSI shall be indicated with empty IMSI element.

NOTE 4: If there is no available STN-SR in the HSS, it indicates that the user is not SRVCC subscribed, as described in 3GPP TS 23.008 [27].

If there is an error in any of the above steps then the HSS shall stop processing and shall return the error code specified in the respective step (see 3GPP TS 29.329 [5] and 3GPP TS 29.229 [7] for an explanation of the error codes).

If the HSS cannot fulfil the received request for reasons not stated in the above steps, e.g. due to a database error or empty mandatory data elements, it shall stop processing the request and set Result-Code to DIAMETER_UNABLE_TO_COMPLY.

Otherwise, the requested operation shall take place and the HSS shall return the Result-Code AVP set to DIAMETER_SUCCESS. Result-Code DIAMETER_SUCCESS is used also if the requested data does not exist in the HSS i.e. when the HSS is indicating valid empty data elements.

6.1.2 Data Update (Sh-Update)

This procedure is used between the AS and the HSS. The procedure is invoked by the AS and is used:

- To allow the AS to update the transparent (repository) data stored at the HSS for each IMS Public User Identity (for Public User Identities matching a Wildcarded Public User Identity, the transparent data shall be stored per Wildcarded Public User Identity, and not for each specific Public User Identity matching that Wildcarded Public User Identity) or Public Service Identity (for Public Service Identities matching a Wildcarded PSI, the transparent data shall be stored per Wildcarded PSI, and not for each specific Public Service Identity matching that Wildcarded PSI).
- To allow the AS to update the PSI Activation State of a distinct Public Service Identity in the HSS.
- To allow the AS to update the Dynamic Service Activation Info stored at the HSS.
- To allow the AS to update the Short Message Service Registration Info stored at the HSS.

This procedure is mapped to the commands Profile-Update-Request/Answer in the Diameter application specified in 3GPP TS 29.329 [5]. Tables 6.1.2.1 and 6.1.2.2 detail the involved information elements.

Table 6.1.2.1: Sh-Update

Information element name	Mapping to Diameter AVP	Cat.	Description
User Identity (See 7.1)	User-Identity	М	IMS Public User Identity or Public Service Identity or MSISDN for which data is updated. See section 7.1 for the content of this AVP.
Wildcarded PSI (See 7.1A)	Wildcarded- Public-Identity	0	If the request refers to a Wildcarded PSI, the AS may include the corresponding Wildcarded PSI in this information element. If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public Service Identity in the detailed behaviour refer to the Wildcarded PSI.
Wildcarded Public User Identity (See 7.1B)	Wildcarded- IMPU	0	If the request refers to a Wildcarded Public User Identity, the AS may include the corresponding Wildcarded Public User Identity in this information element. If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public User Identity in the detailed behaviour refer to the Wildcarded Public User Identity.
Requested data (See 7.3)	Data-Reference	М	This information element includes the reference to the data on which updates are required (possible values of the Data Reference are defined in Table 7.6.1).
Data (See 7.6)	User-Data	М	Updated data.
Application Server Identity (See 7.9)	Origin-Host	М	IE that identifies the AS originator of the request and that is used to check the AS permission list.
Private identity (see 7.6.19)	User-Name	С	Private Identity of the user for whom the data is required. Check table 7.6.1 to see when it is applicable.

Table 6.1.2.2: Sh-Update Resp

Information element name	Mapping to Diameter AVP	Cat.	Description
Result (See 7.5)	Result-Code / Experimental-	М	Result of the update of data in the HSS.
	Result		Result-Code AVP shall be used for errors defined in the Diameter Base Protocol.
			Experimental-Result AVP shall be used for Sh errors. This is a grouped AVP which contains the 3GPP Vendor ID in the Vendor-Id AVP, and the error code in the Experimental-Result-Code AVP.
Wildcarded PSI (See 7.1A)	Wildcarded- Public-Identity	0	If the request refers to a specific PSI matching a Wildcarded PSI and the Wildcarded-PSI was not included in the request, the HSS may include
,			the corresponding Wildcarded PSI in this information element. This information may be used by the AS to identify the affected Wildcarded PSI.
Wildcarded Public User	Wildcarded- IMPU	0	If the request refers to a Public User Identity matching a Wildcarded Public User Identity and the Wildcarded-IMPU AVP was not included in
Identity (See 7.1B)			the request, the HSS may include the corresponding Wildcarded Public User Identity in this information element. This information may be used
·			by the AS to identify the affected Wildcarded Public User Identity.
Repository Data ID (See 7.17)	Repository-Data- ID	0	If the HSS and the AS support the Update-Eff feature or the Update-Eff- Enhance feature and if a Sh-Update Request with multiple repository
			data fails, this information element shall include the service indication and the sequence number of the repository data instance that has
		_	generated the error.
Requested data (See 7.3)	Data-Reference	0	If the HSS and the AS support the Update-Eff-Enhance feature and if an Sh-Update Request with multiple data references fails, this information
			element shall include the Data reference for the data instance that has
			generated the error.

6.1.2.1 Detailed behaviour

Within the Sh-Update Request, the keys to determine the updated data are part of the information element Data (See 7.6). When data in the repository is updated (i.e. added, modified or removed) Service-Indication and Sequence-Number are also sent as part of the information element Data.

Newly added transparent data shall be associated with a Sequence Number of 0 in the Sh-Update Request. Sequence Number value 0 is reserved exclusively for indication of newly added transparent data.

Modified and removed transparent data shall be associated within the Sh-Update Request with a Sequence Number of n+1 where n is the original Sequence Number associated with the transparent data before modification or removal. If n equals 65535, then the next modification or deletion of that transparent data shall be associated with a Sequence Number of 1.

Upon reception of the Sh-Update request, the HSS shall, in the following order:

- 1. In the AS permission list (see section 6.2) check that the data that is requested to be updated (Sh-Update) by this AS, is allowed to be updated by checking the combination of the identity of the AS sending the request (identified by the Origin-Host AVP) and the supplied Data-Reference.
 - If the data is not allowed to be updated, Experimental-Result shall be set to DIAMETER_ERROR_USER_DATA_CANNOT_BE_MODIFIED in the Sh-Update Response.
- 2. Check that the User Identity in the request exists in the HSS. If not, Experimental-Result shall be set to DIAMETER_ERROR_USER_UNKNOWN in the Sh-Update Response.
- 2a. Check if the Private User Identity (if received) corresponds to the IMPU/MSISDN received in User-Identity. If not, Experimental-Result-Code shall be set to DIAMETER_ERROR_IDENTITIES_DONT_MATCH.
- 3. If the User Identity and the Private User Identity (if present) do not apply to the Data-Reference indicated in the request according to Table 7.6.1, Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED in the Sh-Update Response.
- 4. If Data-Reference is PSIActivation (18), then the HSS shall check that the User Identity contains a distinct Public Service Identity. If it does, then the HSS shall update the corresponding PSI Activation State and return the Result-Code AVP set to DIAMETER_SUCCESS. If it does not, then the Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED in the Sh-Update Response.
 - The change of a Public Service Identity from ACTIVE to INACTIVE shall trigger the network initiated deregistration of the Public Service Identity in the HSS.
- 4a. If Data-Reference is DSAI (19), check whether or not, for the Public Identity, there is an instance of DSAI matching the DSAI-Tag contained in the Sh-Update command. If so, then the HSS shall update the DSAI value and return the Result-Code AVP set to DIAMETER_SUCCESS. If not, Experimental-Result shall be set to DIAMETER_ERROR_DSAI_NOT_AVAILABLE.
 - The changes of DSAI value shall trigger the procedures described in section 7.14 in order to determine which initial filter criteria should be masked or unmasked. If these procedures change the set of unmasked initial filter criteria, the HSS should behave as if the initial filter criteria had been administratively changed, which implies e.g. sending Sh-Notif or Cx-Update_Subscr_Data messages (see 3GPP TS 29.228 [6]).
- 4b. If Data-Reference is SMSRegistrationInfo (24), check whether or not, for the IMS Public User Identity or MSISDN, IP-SM-GW number element contained in the Sh-Update command is empty. If it is empty, then the HSS shall delete the stored registered IP-SM-GW number (if any) and return the Result-Code AVP set to DIAMETER_SUCCESS. A preconfigured IP-SM-GW number shall not be deleted.
 - If it is not empty, the HSS shall store/update the registered IP-SM-GW number and return the Result-Code AVP set to DIAMETER_SUCCESS. A preconfigured IP-SM-GW number shall not be overwritten.
 - The Service Centre Address in the HSS shall not be updated by this operation.
- NOTE: The address of the Short Message Service Centre as defined in 7.6.16 is only applicable to Sh-Pull operation.
- 4c. If the Data-Reference indicates that repository data is present, and if the HSS and the AS supports the Update-Eff feature, check whether there are multiple repository data instances. If so, then repeat the steps 5 and 6 below

for each instance of repository data ensuring that no repository data is changed until the checks done in the steps 5 and 6 have been successful for all the repository data instances.

4d. If the Data-Reference is STN-SR (27) and if the STN-SR is different from the one previously stored or provisioned, the HSS shall overwrite the STN-SR. If the Data-Reference is STN-SR (27), and if there is no stored STN-SR in the HSS, Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED in the Sh-Update Response.

NOTE: If there is no stored STN-SR in the HSS, it indicates that the user is not SRVCC subscribed, as described in 3GPP TS 23.008 [27].

- 5. Check whether or not the data that is requested to be updated by the AS, as identified by the Service-Indication, is currently being updated by another entity. If there is an update of the data in progress, Experimental-Result shall be set to DIAMETER_PRIOR_UPDATE_IN_PROGRESS in the Sh-Update Response.
- 6. Check whether or not there is any repository data stored at the HSS already for the specified Service-Indication and the associated IMS Public User Identity (or group if the IMS Public User Identity is alias) or Public Service Identity.
 - If repository data identified by the Service-Indication is stored at the HSS for the specified IMS Public User Identity, IMS Public User Identity group or Public Service Identity, check the following premises:
 - 1. Sequence Number in Sh Update is not equal to 0
 - 2. (Sequence_Number_in_Sh_Update 1) is equal to (Sequence_Number_In_HSS modulo 65535)
 - If either of the above premises is false then Experimental-Result shall be set to DIAMETER_ERROR_TRANSPARENT_DATA_OUT_OF_SYNC in the Sh-Update Response.
 - If both of the above premises are true, then check whether or not Service Data is received within the Sh-Update Req.
 - If Service Data element is present in the Sh-Update Req, check whether or not the size of the data is greater than that which the HSS is prepared to accept.
 - If there is more data than the HSS is prepared to accept then Experimental-Result shall be set to DIAMETER ERROR TOO MUCH DATA and the new data shall be discarded.
 - If the HSS is prepared to accept the data, then the repository data stored at the HSS shall be updated with the repository data sent in the Sh-Update Req and the Sequence Number associated with that repository data shall be updated with that sent in the Sh-Update Req. This triggers the sending of Sh-Notif messages to any other ASs that are subscribed to Notifications for updates to the service data for that IMS Public User Identity or Public Service Identity (see 6.1.4).
 - If Service Data element is not present in the Sh-Update Req, the data stored in the repository at the HSS shall be removed, and as a consequence the Service Indication and the Sequence Number associated with the removed data shall also be removed. This triggers the sending of Sh-Notif messages with that Service Indication and Sequence Number to be deleted but with an absent Service Data element, to any other ASs that are subscribed to Notifications for updates to the service data for that IMS Public User Identity or Public Service identity (see 6.1.4). After sending Sh-Notif messages, the subscriptions to Notifications for the removed Repository Data shall be deleted.
 - If repository data identified by the Service-Indication is not stored for the IMS Public User Identity, IMS Public User Identity group or Public Service Identity i.e. the Sh-Update Req intends to create a new repository data, check whether or not the Sequence Number in the Sh-Update Req is 0.
 - If the sequence number is not set to 0, Experimental-Result shall be set to DIAMETER_ERROR_TRANSPARENT_DATA_OUT_OF_SYNC
 - If the sequence number is set to 0 check whether Service Data is included within the Sh-Update Req.
 - If Service Data is not present in the Sh-Update Req, then Experimental-Result shall be set to DIAMETER_ERROR_OPERATION_NOT_ALLOWED and the operation shall be ignored by the HSS.

- If Service Data element is present in the Sh-Update Req, check whether or not the size of the data is greater than that which the HSS is prepared to accept.
 - If there is more data than the HSS is prepared to accept then Experimental-Result shall be set to DIAMETER_ERROR_TOO_MUCH_DATA and the new data shall be discarded.
 - If the HSS is prepared to accept the data included in the Sh-Update Req, then the data shall be stored in the data repository in the HSS.

If there is an error in any of the above steps then the HSS shall stop processing and shall return the error code specified in the respective step (see 3GPP TS 29.329 [5] and 3GPP TS 29.229 [7] for an explanation of the error codes).

If the HSS cannot fulfil the received request for reasons not stated in the above steps, e.g. due to database error, it shall stop processing the request and set Result-Code to DIAMETER UNABLE TO COMPLY.

If the HSS and the AS support the Update-Eff feature, the Sh Update is successful only if it is successful for the update of all the repository data instances in the request. Otherwise the HSS shall keep or restore all the stored repository data as they were before receiving the Sh Update request. If the error occurs during the steps 5 or 6 and if there were several repository data instances in the request, the Sh Update response shall contain a Repository Data ID indicating the service indication and the sequence number of (one of) the repository data instance(s) for which an error occurred.

If the HSS and the AS support the Update-Eff-Enhance feature, the Sh Update is successful only if it is successful for the update of all the data instances in the request. Otherwise the HSS shall keep or restore all the stored data as they were before receiving the Sh Update request. If an error occurs during the steps 5 or 6 with any of the data instance in the request, the Sh Update response shall contain the corresponding Data Reference indicating the first data instance for which an error occurred. If there were several repository data instances in the request, the HSS shall behave the same as specified for Update-Eff feature.

Otherwise, the requested operation shall take place and the HSS shall return the Result-Code AVP set to DIAMETER SUCCESS.

NOTE: When an AS receives DIAMETER_ERROR_TRANSPARENT_DATA_OUT_OF_SYNC the AS may attempt to resolve the inconsistency between the version of the repository data that it holds and that stored at the HSS. It may execute a Sh-Pull to retrieve the current version of the data from the HSS or it may wait to receive a subsequent Sh-Notif message from the HSS for the affected repository data.

6.1.3 Subscription to notifications (Sh-Subs-Notif)

This procedure is used between the AS and the HSS. The procedure is invoked by the AS and is used:

- To subscribe to Notifications for when particular transparent and/or non-transparent data for a specified IMS Public User Identity or Public Service Identity is updated, from the HSS.
- Optionally to request the user data from the HSS in the same operation.

This procedure is mapped to the commands Subscribe-Notifications-Request/Answer in the Diameter application specified in 3GPP TS 29.329 [5]. Tables 6.1.3.1 and 6.1.3.2 detail the information elements involved.

Table 6.1.3.1: Sh-Subs-Notif

Information element name	Mapping to Diameter AVP	Cat.	Description
User Identity (See 7.1)	User-Identity	М	IMS Public User Identity or Public Service Identity or MSISDN for which notifications of data changes are requested. See section 7.1 for the content of this AVP.
Wildcarded PSI (See 7.1A)	Wildcarded- Public-Identity	0	If the request refers to a Wildcarded PSI, the AS may include the corresponding Wildcarded PSI in this information element.
			If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public Service Identity in the detailed behaviour refer to the Wildcarded PSI.
Wildcarded Public User Identity (See 7.1B)	Wildcarded- IMPU	0	If the request refers to a Wildcarded Public User Identity, the AS may include the corresponding Wildcarded Public User Identity in this information element.
			If this element is present, it should be used by the HSS to identify the identity affected by the request. If that is the case, the terms User Identity or Public User Identity in the detailed behaviour refer to the Wildcarded Public User Identity.
Requested Data (See 7.3)	Data-Reference	М	This information element includes the reference to the data on which notifications of change are required (valid reference values are defined in 7. 6).
Subscription request type (See 7.7)	Subs-Req-Type	М	This information element indicates the action requested on subscription to notifications.
Send Data Indication (See 7.13)	Send-Data- Indication	0	This information element requests that the data is sent in the response. Send Data Indication is not applicable to one time subscriptions to UE reachability for IP.
Service Indication (See 7.4)	Service- Indication	С	IE that identifies, together with the User Identity and Data-Reference, the set of service related transparent data for which notifications of changes are requested. Check table 7.6.1 to see when it is applicable.
Application Server Identity (See 7.9)	Origin-Host	М	IE that identifies the AS originator of the request and that is used to check the AS permission list.
Application Server Name (See 7.10)	Server-Name	С	IE that is used, together with the User Identity and Data-Reference, as key to identify the filter criteria. Check table 7.6.1 to see when it is applicable.
Expiry Time (See 7.12)	Expiry-Time	0	Gives the absolute time requested at which the subscription expires.
Dynamic Service Activation Information Tag (see 7.14)	DSAI-Tag	С	IE that identifies, together with the User Identity and Data-Reference, the instance of Dynamic Service Activation Info (DSAI) requested. Check table 7.6.1 to see when it is applicable.
Requested Identity set (See 7.11)	Identity-Set	С	If Data-Reference indicates that IMS Public Identities is the requested data set to be downloaded, this information element shall be included.
			For the values this information element can take and expected behaviour see table 6.1.1.1, with the exception for the default value that is not applicable in this case.
One time notification	One-Time-	0	Check table 7.6.1 to see when it is applicable. This information element indicates if subscription shall be ended by
(See 7.16)	Notification		the HSS after sending the first notification.
Private identity	User-Name	0	This IE is only applicable to UE reachability for IP. Private Identity of the user for whom the data is required.
(see 7.6.19)			Check table 7.6.1 to see when it is applicable.

Table 6.1.3.2: Sh-Subs-Notif Resp

Information element name	Mapping to Diameter AVP	Cat.	Description
Expiry Time (See 7.12)	Expiry-Time	0	Acknowledges the absolute time at which the subscription expires.
Data (See 7.6)	User-Data	0	Current values of the data for which notifications have been requested. It should be present if the Send-Data-Indication AVP is set to value USER_DATA_REQUESTED.
Wildcarded PSI (See 7.1A)	Wildcarded- Public-Identity	0	If the request refers to a specific PSI matching a Wildcarded PSI and the Wildcarded PSI was not included in the request and is not included in the User-Data AVP, the HSS may include the corresponding Wildcarded PSI in this information element. This information may be used by the AS to identify the affected Wildcarded PSI.
Wildcarded Public User Identity (See 7.1B)	Wildcarded- IMPU	0	If the request refers to a Public User Identity matching a Wildcarded Public User Identity and the Wildcarded-IMPU AVP was not included in the request, the HSS may include the corresponding Wildcarded Public User Identity in this information element. This information may be used by the AS to identify the affected Wildcarded Public User Identity.
Result (See 7.5)	Result-Code / Experimental- Result	M	Result of the request. Result-Code AVP shall be used for errors defined in the Diameter Base Protocol. Experimental-Result AVP shall be used for Sh errors. This is a grouped AVP which contains the 3GPP Vendor ID in the Vendor-Id AVP, and the error code in the Experimental-Result-Code AVP.

6.1.3.1 Detailed behaviour

The HSS shall take note of the subscription request on the data identified by User Identity and Data-Reference. If notifications on changes of repository data are requested, Service-Indication shall be present in the request. If notifications on changes of filter criteria are requested, the Server-Name AVP shall be used as key to the filter criteria. If the request contains a specific Public Service Identity matching a Wildcarded PSI, the HSS shall interpret that the subscription refers to the information associated to the Wildcarded PSI. The Server-Name AVP shall contain the SIP URL of the AS sending the request. If notifications on changes of DSAI are requested, the DSAI-Tag AVP shall be used as key of the DSAI whose changes are to be monitored.

Upon reception of the Sh-Subs-Notif request, the HSS shall, in the following order (if there is an error in any of the following steps the HSS shall stop processing and return the corresponding error code, see 3GPP TS 29.329 [5] and 3GPP TS 29.229 [7]), process the hereafter steps that, unless otherwise stated, apply both for the Subscription request type information element indicating the request is to subscribe or to unsubscribe:

- 1. In the AS permission list (see section 6.2) the HSS shall check that the AS is allowed to subscribe to notifications (Sh-Subs-Notif) for the requested data by checking the combination of the identity of the AS sending the request (identified by the Origin-Host AVP) and the supplied Data-Reference.
 - If this AS does not have Sh-Subs-Notif permission for the data referenced, Experimental-Result shall be set to DIAMETER_ERROR_USER_DATA_CANNOT_BE_NOTIFIED in the Sh-Subs-Notif Response.
- 2. The HSS shall check that the User Identity in the request exists in HSS. If not, Experimental-Result shall be set to DIAMETER_ERROR_USER_UNKNOWN in the Sh-Subs-Notif Response.
- 2a. Check if the Private Identity (if received) corresponds to IMPU/MSISDN received in User-Identity. If not, Experimental-Result-Code shall be set to DIAMETER_ERROR_IDENTITIES_DONT_MATCH.
- 3. If the User Identity and the Private Identity (if present) do not apply to the Data-Reference indicated in the request according to Table 7.6.1, Experimental-Result shall be set to DIAMETER ERROR OPERATION NOT ALLOWED in the Sh-Subs-Notif Response.
- 3a. If Data-Reference is DSAI (19), check whether or not, for the Public Identity, there is an instance of DSAI matching the DSAI-Tag contained in the Sh-Subs-Notif command. If not, Experimental-Result shall be set to DIAMETER_ERROR_DSAI_NOT_AVAILABLE.

4. If the Sh-Subs-Notif Request contains an Expiry Time, the HSS should also include in the Sh-Subs-Notif Response an Expiry Time IE with the absolute time at which the subscription expires in the case of a successful subscription. This time may be earlier than the requested expiry time. If the HSS includes this IE, then no notification shall be sent to the AS after the expiration time. If the HSS receives a Sh-Subs-Notif Request without the Expiry Time IE, the HSS should treat it as a request for an unlimited subscription.

If the HSS does not include this IE in the response, that indicates an unlimited subscription.

If a subsequent request is received by the HSS where the Expiry Time IE is present but different from what the HSS has previously stored, the HSS should replace the stored expiration time with what was received in the request.

- 5. If Data-Reference is RepositoryData(0) and the transparent data associated with the Service Indication does not exist in the HSS (i.e. Service Data is not present), then Experimental-Result shall be set to DIAMETER ERROR SUBS DATA ABSENT.
- 6. If the Subscription request type information element indicates that this is a request to subscribe, the HSS shall associate the Application Server Identity with the list of entities that need to be notified when the data identified by the request is modified and set the Result-Code to DIAMETER_SUCCESS in the Sh-Subs-Notify response. If the Subscription request type information element indicates that this is a request to unsubscribe, the HSS shall remove the association of the Application Server Identity with the same list. In this last case, the Result-Code shall be set to DIAMETER_SUCCESS if the operation is successful or if the Application Server Identity was not present in the list.
- 7. If the HSS and AS supports the Notif-Eff feature and if multiple Data-Reference AVPs occur in the Sh-Subs-Notif Request, each Data-Reference shall be treated as a request to establish a separate notification request. When multiple notification requests are requested, and all of them succeed, the HSS shall set the Result-Code to DIAMETER_SUCCESS in the Sh-Subs-Notify response. If one of them is unsuccessful, the HSS shall return the Result code with the relevant Diameter error indication and come back to the situation regarding to subscriptions as before the reception of the Sh-Subs-Notif Request.
- 8. If the HSS and AS supports the Notif-Eff feature and if multiple Service-Indication AVPs occur in the Sh-Subs-Notif Request, each Service-Indication shall be treated as a request to establish a separate notification request for change of Transparent data. When multiple notification requests are requested, and all of them are successful, the HSS shall return the Result-Code set to DIAMETER_SUCCESS in the Sh-Subs-Notify response. If one of them is unsuccessful, the HSS shall return the Result code with the relevant Diameter error value and come back to the situation regarding to subscriptions as before the reception of the Sh-Subs-Notif Request.
- 9. If the Send Data Indication information element is present in the request and the HSS supports the return of the User-Data in this request, check whether or not the data that is requested to be downloaded by the AS is currently being updated by another entity. If there is an update of the data in progress, the HSS may delay the response until the update has been completed. The HSS shall ensure that the data returned is not corrupted by this conflict.
- 10. If the Send Data Indication information element is present in the request, the HSS should include the data pertinent to the requested Data Reference in the User-Data AVP and if the HSS supports the Notif-Eff feature, the HSS should include the data pertinent to all the requested Data References in the User-Data AVP. The HSS shall set the Result-Code to DIAMETER_SUCCESS. This includes cases where the data is not available to the HSS and an empty tag is included as follows.
 - Unavailable elements of Sh IMS Data shall be indicated as follows.
 - An unavailable S-CSCF name shall be indicated with empty SCSCFName element.
 - If all iFCs for the user that are relevant for the AS are unavailable it shall be indicated with empty IFCs element.
 - Similarly for PSI activation information.

If the HSS cannot fulfil the received request for reasons not stated in the above steps, e.g. due to database error, it shall stop processing the request and set Result-Code to DIAMETER_UNABLE_TO_COMPLY.

6.1.4 Notifications (Sh-Notif)

This procedure is used between the HSS and the AS. The procedure is invoked by the HSS and is used:

- To inform the AS of changes in transparent and/or non-transparent data to which the AS has previously subscribed to receive Notifications for, using Sh-Subs-Notif (see 6.1.3).

This procedure is mapped to the commands Push-Notification-Request/Answer in the Diameter application specified in 3GPP TS 29.329 [5]. Tables 6.1.4.1 and 6.1.4.2 detail the involved information elements.

Table 6.1.4.1: Sh-Notif

Information element name	Mapping to Diameter AVP	Cat.	Description
User Identity (See 7.1)	User-Identity	M	IMS Public User Identity or Public Service Identity or MSISDN for which data has changed. If the request refers to a Wildcarded PSI, the HSS may include any PSI matching the corresponding Wildcarded PSI in this information element. The AS shall find the corresponding Wildcarded PSI with this information. See section 7.1 for the content of this AVP.
Wildcarded PSI (See 7.1A)	Wildcarded- Public-Identity	0	If the request refers to a Wildcarded PSI, the HSS shall include the corresponding Wildcarded PSI in this information element. If this element is present, it shall be used by the AS instead of the User Identity to identify the identity affected by the request.
Wildcarded Public User Identity (See 7.1B)	Wildcarded- IMPU	0	If the request refers to a Wildcarded Public User Identity, the HSS shall include the corresponding Wildcarded Public User Identity in this information element. If this element is present, it shall be used by the AS instead of the User Identity to identify the identity affected by the request.
Data (See 7.6)	User-Data	М	Changed data.
Private Identity (see 7.6.19)	User-Name	С	Private Identity of the user for whom the data is required. This information element shall be present only if the associated request included the Private Identity.

Table 6.1.4.2: Sh-Notif Resp

Information element name	Mapping to Diameter AVP	Cat.	Description
Result (See 7.5)	Result-Code / Experimental-Result	М	Result of the request.
,			Result-Code AVP shall be used for errors defined in the Diameter Base Protocol.
			Experimental-Result AVP shall be used for Sh errors. This is a grouped AVP which contains the 3GPP Vendor ID in the Vendor-Id AVP, and the error code in the Experimental-Result-Code AVP.

6.1.4.1 Detailed behaviour

The keys to the updated data are part of the information element User-Data AVP. When data repository is updated Service-Indication and Sequence Number shall also be part of the information element User-Data.

Since authentication pending is a transient state of normally very short duration, notification of an IMS user's state change, to and from the authentication pending state shall not be sent to Application Servers, when the previous state before authentication pending and next state after authentication pending are the same. If the states are different before the authentication pending state is entered and after the authentication pending state is left then notification is sent to the AS of this new state.

If the HSS and AS supports the Notif-Eff feature and if multiple subscriptions to notifications are associated with a Public User Identity, the HSS may combine the notifications for multiple Data References and Service Indications into a single notification message.

If the HSS and the AS support the Update-Eff feature, the HSS may generate only one notification message grouping the data changes notifications according to the subscribed notifications and the resulting successful achievement of a Sh-Update procedure with multiple repository data instances. This notification message may also include other notifications as described with the Notif-Eff feature.

Removal of the subscribed data is indicated with the content of User-Data AVP. The content shall be compliant with the XML-schema defined in Annex D. Removed repository data shall be indicated with RepositoryData element that does not contain ServiceData element. Removed S-CSCF name shall be indicated with empty SCSCFName element. Removed IP Address Secure Binding Information shall be indicated with empty IPv4Addres, or IPv6Prefix and/ or IPv6 interface element respectively. If all iFCs for the user that are relevant for the AS have been removed it shall be indicated with empty IFCs element.

Removal of Public Identity for which the AS has any active subscription other than IMSPublicIdentity (see table 7.6.1) shall be indicated in the DeletedIdentities element.

If One-Time-Notification AVP was included by the AS in Sh-Subs-Notif, the HSS shall remove the related subscription information after sending Sh-Notif, i.e. no subsequent notifications shall be sent to AS.

Notifications shall include the data updated for the received IMPU/MSISDN and Private Identity (if present).

NOTE: Data referred to a Private Identity (e.g. IMS Private User Identity) implies that only the data (e.g. UE reachability) specific for that Private Identity is included, regardless of the type of User Identity received (e.g. IMS Public User Identity shared by multiple IMS Private User Identities).

Table 6.1.4.1 details the valid result codes that the AS can return in the response.

Condition **Result-Code AVP value** DIAMETER SUCCESS The request succeeded. DIAMETER ERROR USER DATA NOT RECOGNIZED The request failed. The AS informs the HSS that the received user information contained information, which was not recognized or supported by the AS DIAMETER_ERROR_USER_UNKNOWN The request failed because the Public Identity or MSISDN are is not found in the AS. The request failed. The AS informs the HSS that it tried to DIAMETER ERROR TOO MUCH DATA push too much data into the AS. DIAMETER ERROR NO SUBSCRIPTION TO DATA The request failed. The AS informs the HSS that the notification refers to information to which the AS is not subscribed. DIAMETER_UNABLE_TO_COMPLY The request failed.

Table 6.1.4.1.1: Sh-Notif response valid result codes

If DIAMETER_ERROR_USER_UNKNOWN is received in the Sh-Notif response, the HSS shall remove all of the subscription to notification information subscribed by the AS related to the specific User Identity.

6.2 AS permissions list

In table 7.6.1, the contents of the Data-AVP are described. Some of the individual elements carried within Data-AVP may be requested by the AS from the HSS using the Sh-Pull command (see section 6.1.1) or may be updated at the HSS by the AS using the Sh-Update command (see section 6.1.2). The AS may also request that the HSS notifies the AS of changes to specific elements within the Data-AVP using the Sh-Subs-Notif command (see section 6.1.3). The HSS will only allow these operations to take place if the element of the Data-AVP is permitted to be included in the specific command requested by the AS, as indicated in table 7.6.1.

To manage whether an AS may request each element of Data-AVP with a specific command, the HSS shall maintain a list of AS permissions (the "AS Permissions List"). AS permissions are identified by AS identity and Data Reference with the possible permissions associated with each Data Reference being Sh-Pull, Sh-Update, Sh-Subs-Notif or any combination of these permissions (see table 7.6.1 for details of which permissions are allowed for each Data Reference). The permissions apply to all users served by the HSS, they are not user specific. When an AS requests Sh-

Pull, Sh-Update or Sh-Subs-Notif the HSS shall check permissions and return an error result if the AS does not have the required permission. If the AS permissions change in a later stage, i.e. the AS does not longer have the required permission, the HSS shall remove all the subscription to notifications for the AS for which required permissions have been prohibited.

6.3 Void

6.4 Void

6.5 User identity to HSS resolution

The User identity to HSS resolution mechanism enables the AS to find the identity of the HSS that holds the subscriber data for a given IMS Public User Identity or Public Service Identity when multiple and separately addressable HSSs have been deployed by the network operator. The resolution mechanism is not required in networks that utilise a single HSS or when an AS is configured to use pre-defined HSS.

The resolution mechanism described in 3GPP TS 23.228 [8] shall use a Subscription Locator Function (SLF) or a Diameter Proxy Agent.

The AS accesses the SLF via the Dh interface. The Dh interface shall always be used in conjunction with the Sh interface. The Dh interface shall be based on Diameter. The SLF functionality shall use the routing mechanism provided by an enhanced Diameter redirect agent.

The SLF or the Diameter Proxy Agent shall be to determine the HSS identity.

To get the HSS identity the AS shall send the Sh request normally destined to the HSS to a pre-configured Diameter address/name.

- If this Sh Request is received by an SLF (acting as a Diameter redirect agent), the SLF shall determine the HSS address and shall send to the AS a notification of redirection towards the HSS identity, in response to the Sh request. Multiple HSS identities may be included in the response, as specified in IETF RFC 3588 [9]. In such a case, the AS shall send the Sh Request to the first HSS identity in the ordered list received in the Sh Response from the SLF. If the AS does not receive a successful response to the Sh Request, the AS shall send a Sh Request to the next HSS identity in the ordered list. This procedure shall be repeated until a successful response from an HSS is received.
- If this Sh Request is received by the Diameter Proxy Agent, the Diameter Proxy Agent shall determine the HSS identity and shall forward the Sh request directly to the HSS. The AS shall determine the HSS identity from the response to the Sh request received from the HSS.

The AS should store the HSS identity/name/Realm and shall use it in further Sh requests associated to the same IMS Public Identity.

In networks where the use of the user identity to HSS resolution mechanism is required and the AS is not configured to use a predefined HSS, each AS shall be configured with the pre-configured address/name of the SLF or the Diameter Proxy Agent to enable use of these resolution mechanisms.

7 Information element contents

7.1 User Identity

This information element contains an IMS Public User Identity, Public Service Identity or MSISDN according to the conditions described in table 7.1.1.

Table 7.1.1: User Identity content

Information element name	Mapping to Diameter AVP	Cat.	Description
IMS Public User Identity / Public Service Identity (See 7.1.1)	Public- Identity	С	IMS Public User Identity or Public Service Identity for which data is required. If the MSISDN is not included in the User-Identity AVP, the Public-Identity AVP shall be included in Sh messages only for allowed Data References as described in Table 7.6.1.
MSISDN (See 7.1.2)	MSISDN	С	MSISDN for which data is required. If the Public-Identity AVP is not included in the User-Identity AVP, the MSISDN AVP shall be included in the Sh-Pull or Sh-Subs-Notif or Sh-Update messages only for allowed Data References as described in Table 7.6.1.

7.1.1 IMS Public User Identity / Public Service Identity

This information element contains an IMS Public User Identity / Public Service Identity (either SIP URI or tel URI). See 3GPP 23.003 [11].

7.1.2 MSISDN

This information element contains the MSISDN, or the Basic MSISDN if multinumbering is used (see 3GPP TS 23.012 [19]).

7.1A Wildcarded PSI

This information element contains a Wildcarded PSI that is hosted by an application server. For definition of a Wildcarded PSI, see 3GPP TS 23.003 [11].

7.1B Wildcarded Public User Identity

This information element contains a Wildcarded Public User Identity that is stored in the HSS. For definition of a Wildcarded Public User Identity, see 3GPP TS 23.003 [11].

7.2 Requested Domain

This information element details the access domains for which certain data (e.g. user state, location information) are requested. See 3GPP TS 29.329 [5] for the list of possible values.

7.2A Requested Nodes

This information element details the access node types for which certain data (e.g. user state, location information) are requested. See 3GPP TS 29.329 [5] for the list of possible values.

7.2B Serving Node Indication

This information element indicates that the sender does not require any location information other than the serving node address/identity (i.e. MME name and/or SGSN number, or VLR number) for the requested domain and the requested nodes (if included). Other location information (e.g. Global Cell ID, Tracking Area ID) may be absent.

This information element is only applicable to Location Information.

7.3 Requested Data

- Reference to the data that an AS is requesting from the HSS.
- Reference to the data which, an AS wants to be notified of, when changed.
- Reference to data for which subscription to notification of change is rejected.
- Reference to data for which updates are required.
- Reference to data for which update fails.

See section 7.6.

7.4 Service Indication

Identifier of one set of service related transparent data, which is stored in an HSS in an operator network per Public Identity. The HSS shall allocate memory space to implement a data repository to store transparent data per IMS Public User Identity or Public Service Identity and value of Service Indication with a Sequence Number for verification. For Public Service Identities matching a Wildcarded Public Service Identity, the repository data shall be stored per Wildcarded Public Service Identity and not for each specific Public Service Identity.

7.5 Result

This information element contains the result code of the operation. See 3GPP TS 29.329 [5] for the list of possible values.

7.6 Data

This information element contains an XML document conformant to the XML schema defined in Annex D.

Annex C specifies the UML logical model of the data downloaded via the Sh interface.

Table 7.6.1 defines the data reference values and tags, access key and recommended AS permissions (as described in section 6.2) for the operation(s) on data accessible via the Sh interface, i.e. the listed operation(s) in the Operations column are the only ones allowed to be used with this Data Ref value. It is a matter of operator policy to further restrict the AS permission rights defined in table 7.6.1.

An access key between square brackets is considered as optional, while when more than one access key is separated by logical OR and included between brackets, it means that one (and only one) of these access keys is mandatory.

Table 7.6.1: Data accessible via Sh interface

Data Ref.	XML tag	Defined in	Access key	Operations
0	RepositoryData	7.6.1	Data Reference + (IMS Public User Identity OR Public Service Identity) + Service Indication	Sh-Pull Sh-Update Sh-Subs-Notif (Note 1, Note 3)
10	IMSPublicIdentity	7.6.2	Data Reference + (IMS Public User Identiy OR Public Service Identity OR MSISDN) + [Requested Identity Set]	Sh-Pull Sh-Subs-Notif
11	IMSUserState	7.6.3	Data Reference + IMS Public User Identity	Sh-Pull Sh-Subs-Notif

7.6.1 Repository Data

This information element contains transparent data. A data repository may be shared by more than one AS implementing the same service.

7.6.2 IMSPublicIdentity

This information element contains an IMS Public User Identity or a Public Service Identity. If a wildcarded PSI that is stored in the HSS matches the Public Service Identity received, the HSS shall return the wildcarded PSI in addition to the Public Service Identity that was received in the request. If a Wildcarded Public User Identity that is stored in the HSS matches the Public User Identity received, the HSS shall return the Wildcarded Public User Identity in addition to the Public User Identity that was received in the request.

An IMS Public Identity would be either:

- associated with the same Private User Identity or Private Service Identity as the User Identity included in the request or
- associated with the MSISDN present in the request.

Multiple instances of this information element may be included in the message.

7.6.3 IMS User State

This information element contains the IMS User State of the public identifier referenced. Its possible values are:

- REGISTERED,
- NOT_REGISTERED,
- AUTHENTICATION PENDING,
- REGISTERED_UNREG_SERVICES.

If the IMS Public User Identity is shared between multiple Private User Identities, HSS shall indicate the most registered state of the shared IMS Public User Identity to an AS. The most registered state of a shared IMS Public User Identity is defined as follows:

- If the shared IMS Public User Identity is registered with any of the Private User Identities, the most registered state of the shared IMS Public User Identity is REGISTERED.
- If the shared IMS Public User Identity is not currently registered with any of the Private User Identities, but it is in state REGISTERED_UNREG_SERVICES, then the most registered state of the shared IMS Public User Identity is REGISTERED_UNREG_SERVICES.
- If the shared IMS Public User Identity is not currently registered with any of the Private User Identities, and it is not in state REGISTERED_UNREG_SERVICES, but it is in the process of being authenticated with any of the Private User Identities, then the most registered state of the shared IMS Public User Identity is AUTHENTICATION PENDING.
- If the shared IMS Public User Identity is not currently registered with any of the Private User Identities, and it is not in state REGISTERED_UNREG_SERVICES, and it is not in the process of being authenticated with any of the Private User Identities, then the most registered state of the shared IMS Public User Identity is NOT_REGISTERED.

7.6.4 S-CSCF Name

This information element contains the name of the S-CSCF assigned to the IMS Subscription.

7.6.5 Initial Filter Criteria

This information element contains the triggering information for a service.

For a more detailed description, refer to 3GPP TS 23.218 [4] and 3GPP TS 29.228 [6].

7.6.6 Location Information

This information element contains:

- the location of the served subscriber in the MSC/VLR if the requested domain is CS, or
- the location of the served subscriber in the SGSN if the requested domain is PS and either the requested node is SGSN or the requested node is not present, or
- the location of the served subscriber in the MME if the requested domain is PS and the requested nodes is MME, or
- the locations of the served subscriber in the 3GPP AAA Server for TWAN if the requested domain is PS and the requested nodes indicates 3GPP AAA SERVER for TWAN, or
- the locations of the served subscriber in the MME and the SGSN and 3GPP AAA Server for TWAN if the requested domain is PS and the requested nodes are MME and SGSN and 3GPP AAA SERVER for TWAN, or
- the locations of the served subscriber in any of the two serving nodes among the MME, the SGSN and 3GPP AAA Server for TWAN if the requested domain is PS and the requested nodes indicates the corresponding nodes for which the location are to be requested.

If the HSS has to communicate with the MSC/VLR or SGSN and/or MME and/or 3GPP AAA Server to retrieve location information, it shall make use of the service MAP-PROVIDE-SUBSCRIBER-INFO or S6a/S6d-IDR or SWx-PPR. This information element shall contain the location information as received from the access nodes.

If the HSS cannot communicate with the VLR or SGSN or MME (e.g.because the UE is purged), the HSS shall provide the last known UE's location if available e.g. as received in the Purge message from VLR or SGSN or MME.

If the Serving Node Indication was present in the request, the location information shall contain the serving node address(es) as stored in the HSS, according to the requested domain and the requested nodes (if received). Other

location information may be absent, in order to eliminate unnecessary communication with the MSC/VLR or SGSN and/or MME and/or 3GPP AAA Server when the AS does not require these information elements.

For both Location Information for CS and Location Information for GPRS, the considerations described in 3GPP TS 23.078 [14] apply.

7.6.6.1 Location information for CS

This information element consists of the following subordinate information elements:

- Location number: defined in ITU-T Recommendation Q.763 [9]. Considerations described in 3GPP TS 23.018 apply [10].
- Service area ID: defined in 3GPP TS 23.003 [11].
- Global Cell ID: defined in 3GPP TS 23.003 [11].
- Location area ID: defined in 3GPP TS 23.003 [11].
- Geographical Information: defined in 3GPP TS 23.032 [12]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- Geodetic Information: defined in ITU-T Recommendation Q.763 [9]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- VLR Number: defined in 3GPP TS 23.003 [11].
- MSC Number: defined in 3GPP TS 23.003 [11].
- Age of location information: defined in 3GPP TS 23.018 [10].
- Current Location Retrieved: shall be present when location information was obtained after a successful paging
 procedure for Active Location Retrieval if the MS is in idle state or when the location was provided if the MS is
 in active state.
- User CSG information: defined in 3GPP TS 23.060 [29].
- E-UTRAN Cell Global ID: defined in 3GPP TS 23.003 [11].
- Tracking Area ID: defined in 3GPP TS 23.003 [11].

NOTE: When the MSC receives the location information via SGs interface as specified in 3GPP TS 29.118 [30], the ECGI and TAI are included, rather than Location number, Service area ID, Global Cell ID and Location area ID.

7.6.6.2 Location information for GPRS

This information element consists of the following subordinate information elements:

- Service area ID: defined in 3GPP TS 23.003 [11].
- Global Cell ID: defined in 3GPP TS 23.003 [11].
- Location area ID: defined in 3GPP TS 23.003 [11].
- Geographical Information: defined in 3GPP TS 23.032 [12]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- Geodetic Information: defined in ITU-T Recommendation Q.763 [9]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- SGSN Number: defined in 3GPP TS 23.003 [11].
- Routing Area ID: defined in 3GPP TS 23.003 [11].

- Current Location Retrieved: shall be present when location information was obtained after a successful paging
 procedure for Active Location Retrieval if the UE is in idle mode or when the location was provided if the UE is
 in connected mode.
- User CSG information: defined in 3GPP TS 23.060 [29].
- Visited PLMN ID: defined in 3GPP TS 23.003 [11].
- Local Time Zone: the Local Time Zone information (Time Zone and Daylight Saving Time) of the location in the visited network where the UE is attached, as defined in 3GPP TS 29.272 [26].

7.6.6.3 Location information for EPS

This information element consists of the following subordinate information elements:

- E-UTRAN Cell Global ID: defined in 3GPP TS 23.003 [11].
- Geographical Information: defined in 3GPP TS 23.032 [12]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- Geodetic Information: defined in ITU-T Recommendation Q.763 [9]. Considerations described in 3GPP TS 23.018 [10] and 3GPP TS 29.002 [13] apply.
- MME Name: Diameter Identity of the MME as received by the HSS within the S6a ULR Origin-Host AVP; see 3GPP TS 29.272 [31].
- Tracking Area ID: defined in 3GPP TS 23.003 [11].
- Current Location Retrieved: shall be present when location information was obtained after a successful paging
 procedure for Active Location Retrieval if the UE is in idle mode or when the location was provided if the UE is
 in connected mode.
- Visited PLMN ID: defined in 3GPP TS 23.003 [11].
- User CSG information: defined in 3GPP TS 23.060 [29].
- Local Time Zone: the Local Time Zone of the location in the visited network where the UE is attached, as defined in 3GPP TS 29.272 [26].

7.6.6.4 Location Information for TWAN

This information element consists of the following subordinate information elements:

- TWAN SSID: defined in 3GPP TS 29.273 [34].
- TWAN BSSID: defined in 3GPP TS 29.273 [34].
- TWAN PLMN ID: defined in subclause 12.1 of 3GPP TS 23.003 [11] for PLMN Identifer.
- Civic Address: defined in subclause 3.1 of IETF RFC 4776 [35] excluding the first 3 octets.
- TWAN Operator Name: defined in subclause 19.8 of 3GPP TS 23.003 [11].
- Local Time Zone: the Local Time Zone of the location in the visited network where the UE is attached, as defined in 3GPP TS 29.272 [26].
- Logical Access ID defined in ETSI ES 283 034 [37].

NOTE: The location information defined for EPS in section 7.6.6.3 is not relevant to the TWAN location information.

7.6.7 User state

This information element indicates the state of the User Identity in the domain/node indicated by the Requested-Domain/Requested-Node (see 7.2), with the values specified in 3GPP TS 23.078 [14] for Subscriber State and PS Domain Subscriber State, and with the values specified in 3GPP TS 29.272 [31] for EPS User State.

- The HSS shall make use of the operation MAP-PROVIDE-SUBSCRIBER-INFO towards the MSC/VLR to obtain this information if the requested domain is CS.
- The HSS shall make use of the operation S6a-IDR towards the MME to obtain this information if the requested domain is PS and the requested node is MME.
- The HSS shall make use of the operation MAP-PROVIDE-SUBSCRIBER-INFO or S6d-IDR towards the SGSN to obtain this information if the requested domain is PS and either the requested node is SGSN or the requested node is not present.
- The HSS shall make use of the operation S6a-IDR towards the MME and MAP-PROVIDE-SUBSCRIBER-INFO or S6d-IDR towards the SGSN to obtain this information if the requested domain is PS and the Requested Nodes is MME and SGSN.

This information element shall contain the information as received from the access nodes.

7.6.8 Charging information

This information element contains the addresses of the charging functions: primary Online Charging Function (PrimaryEventChargingFunctionName), secondary Online Charging Function (SecondaryEventChargingFunctionName), primary Charging Data Function (PrimaryChargingCollectionFunctionName), and secondary Charging Data Function (SecondaryChargingCollectionFunctionName). When a clash occurs between the charging function address(es) received over the ISC interface and those received over the Sh interface, the address(es) received over the ISC interface should take precedence.

NOTE: The use of the Sh interface to retrieve charging function addresses is not intended as a general-purpose alternative to receiving charging function addresses from the ISC interfaces. Rather, it is meant to address a special case where the AS needs to interact with the charging system before initiating a request to a user when the AS has not received the third party REGISTER for that user.

The AS shall extract the FQDN of the DiameterURI in these information elements and may use it as content of the Destination-Host AVP for the Diameter accounting requests. The parent domain of the FQDN in the DiameterURI shall be used as Destination-Realm. The number of labels used for the Destination-Realm shall be determined before the Charging Information is provisioned and may be a configuration option.

NOTE: A FQDN is an absolute domain name including a subdomain and its parent domain. The subdomain and the parent domain contain one or more labels separated by dots.

7.6.9 MSISDN

This information element contains the MSISDN, or the Basic MSISDN if multinumbering is used, that is associated with the User Identity present in the request. See 3GPP TS 23.012 [19] for Basic MSISDN definition.

Multiple instances of this information element shall only occur if the Public User Identity is shared and no Private Identity was included in the request, otherwise only one instance shall be included in the message.

If Additional-MSISDN feature is supported by the HSS but the AS has indicated that it does not support it, it is up to operator policy to decide what information is returned by the HSS, either what is provisioned in MSISDN or in Additional MSISDN (A-MSISDN).

7.6.9A Extended MSISDN

This information element is returned in addition to MSISDN if Additional-MSISDN feature is supported by the HSS, the AS has indicated as well its support and an Additional MSISDN (A-MSISDN) is provisioned..

It contains the Additional-MSISDN that is associated with the User Identity present in the request.

All valid instances of this information element shall be included in the message.

7.6.10 PSIActivation

This information element contains the activation state of the Public Service Identity present in the request. Its possible values are:

- ACTIVE,
- INACTIVE.

7.6.11 DSAI

When a service is provisioned but not active, an Application Server is typically involved through the ISC interface in sessions where the Application Server is not supposed to perform any task but to proxy incoming transactions.

In order to avoid this disoptimization, a mechanism is provided for the Application Server to signal the HSS that a set of initial filter criteria should be 'masked' for a specific Public User Identity or Public Service Identity. This is, from the Application Server"s perspective, just an indication, and an Application Server must be prepared to be involved in sessions even if the trigger that caused its involvement has been masked by that Application Server.

This information element contains the activation state of a Service (identified by its DSAI-tag, see section 7.14, for a specific user identified by a Public User Identity or of a Service identified by its PSI). Its possible values are:

- ACTIVE.
- INACTIVE.

In the HSS the DSAI can also be associated to a wildcarded PSI. In that case, there is a set of identities matching a specific wildcarded PSI and all the identities in the set share the same DSAIs. Any change in these DSAIs masked from a single identity of the set will apply to all the identities associated to that wildcarded PSI.

Each DSAI is implicitly bound to a list of (at least one) initial filter criteria. The binding is not exclusive, i.e. one instance of initial filter criteria may be bound to zero or more DSAIs, however all the iFCs bound to a given DSAI should trigger to the same AS (i.e. they should share the same ServerName), which is the only one allowed to update it.

An instance of initial filter criteria shall be included into the Service-Profile sent through the Cx Interface according to the operations described in 3GPP TS 29.228 [6] if at least one of the following conditions applies:

- No DSAI is bound to those initial filter criteria;
- At least one of the DSAIs bound to those initial filter criteria is set to ACTIVE.

7.6.12 Void

7.6.13 Service Level Trace Information

This information element contains the Service Level Tracing Information (see IETF draft-dawes-sipping-debug [21]) that is related to a specific Public Identifier. If the ServiceLevelTraceInfo is present, service level tracing shall be enabled in the Application Server for the related Public Identifier according to the configuration data received. If the ServiceLevelTraceInfo is not present, service level tracing is disabled in the Application Server for the related Public Identifier.

7.6.14 IP address secure binding information

This information element contains the IP address (or the prefix in the case of IPv6 stateless autoconfiguration) at any given time. See 3GPP TS 33.203 [22], Annex T.

7.6.15 Service Priority Level

This information element contains the Priority Level allowed for the Public Identity for Priority Service. If the ServicePriority Level is present, priority services are allowed for the Public Identity. See IETF RFC 4412 [25].

7.6.15A Extended Priority

This information element contains the following information elements:

- The PriorityNamespace information element provides the namespace as specified in IETF RFC 4412 [25] and to which the Extended Priority refers.
- The PriorityLevel information element provides the Priority Level allowed for the Public User Identity for a given PriorityNamespace.

7.6.16 SMSRegistrationInfo

This information element contains an IP-SM-GW number and the address of a Short Message Service Centre, see 3GPP TS 29.002 [13]. For the definition of an IP-SM-GW number, see 3GPP TS 23.008[27].

7.6.17 UE reachability for IP

This information element reflects the change of URRP-MME and/or URRP-SGSN parameters and indicates whether the UE has become reachable, i.e. when the URRP-MME and/or URRP-SGSN parameters was set and has been cleared due to UE activity notification from the MME and/or the SGSN, see 3GPP TS 29.272 [26]. It consists of the following subordinate information elements:

- UE-IP-REACHABILITY-MME. Its possible values are:
 - REACHABLE (0)
- UE-IP-REACHABILITY-SGSN. Its possible values are:
 - REACHABLE (0)

7.6.18 T-ADS Information

This information element indicates the RAT type that is serving the UE and whether or not IMS voice over PS Session is supported at the current Routing Area/Tracking Area.

The HSS shall make use of the appropriate S6a operation towards the MME and/or S6d/MAP operation towards the SGSN to retrieve this information.

The possible values for IMS voice over PS Session support are:

- IMS-VOICE-OVER-PS-NOT-SUPPORTED (0)
- IMS-VOICE-OVER-PS-SUPPORTED (1)
- IMS-VOICE-OVER-PS-SUPPORT-UNKNOWN (2)

The possibles values of RAT type are specified in 3GPP TS 29.212 [28], subclause 5.3.31.

7.6.19 Private Identity

This information element contains the IMS Private User Identity or the IMSI. See 3GPP TS 23.003 [17]).

7.6.20 STN-SR

This information element indicates the Session Transfer Number for SRVCC (see 3GPP TS 23.003 [11]).

When STN-SR is updated, the HSS shall make use of the service S6a/S6d-IDR to update the STN-SR in the MME/SGSN.

7.6.21 UE SRVCC Capability

This information element indicates the SRVCC capability of the UE.

The possible values for the UE-SRVCC capability are:

- UE-SRVCC-CAPABILITY-NOT-SUPPORTED (0)
- UE-SRVCC-CAPABILITY-SUPPORTED (1)

7.6.22 CSRN

This information element contains a CS Domain Routeing Number (see 3GPP TS 23.003) associated to the user identity of the request.

The HSS shall make use of the operation MAP-PROVIDE-ROAMING-NUMBER towards the MSC/VLR to obtain this information and shall indicate the Suppression of Announcement to the MSC/VLR.

This information element is requested by AS when all terminating services have been already executed, then HSS is only interested in the CSRN received from MSC/VLR.

7.6.23 Reference Location Information

This information element contains the reference location of the user, e.g. the physical location of the fixed line in the case of a fixed line access, that is associated with the User Identity and Private Identity (if present) in the request. See 3GPP TS 23.008 [27].

7.6.24 IMSI

This information element contains the IMSI that is associated with the IMS Public User Identity present in the request. See 3GPP TS 23.003 [11] for IMSI definition.

7.6.25 IMSPrivateUserIdentity

This information element contains all IMS Private User Identities associated with the IMS Public User Identity present in the request. See 3GPP TS 23.003 [11] for Private User Identity definition.

7.7 Subscription request type

This information element indicates the action requested for subscription to notifications. See 3GPP TS 29.329 [5] for the list of valid values.

7.8 Current Location

This information element indicates whether an active location retrieval has to be initiated or not when an AS requested location information. See 3GPP TS 29.329 [5] for the list of possible values.

7.9 Application Server Identity

This information element contains the identity of the Application Server. It is used for the AS permission check (see 6.2).

7.10 Application Server Name

This information element indicates application server"s SIP URI. See 3GPP TS 29.229 [7] for the detailed definition of the AVP.

7.11 Requested Identity Set

This information element indicates the set of IMS Public Identities that the AS wishes to download. See 3GPP TS 29.329 [5] for the detailed definition of the AVP.

7.12 Expiry Time

This information element indicates the expiry time of the subscription to notifications in the HSS. See 3GPP TS 29.329 [5] for the detailed definition of this AVP.

7.13 Send Data Indication

This information element indicates the request that the User Data is sent in the response. See 3GPP TS 29.329 [5] for the detailed definition of this AVP.

7.14 DSAI Tag

An instance of Dynamic Service Activation Info is uniquely identified by the Public User/Service Identity and a DSAI tag. The same DSAI tag may be used for all the user profiles when indicating the same type of information, but not all the user profiles may contain the same set of tags.

Application Servers shall signal that they are not interested in being involved in new sessions by manipulating Dynamic Service Activation Info (DSAI) inside of dynamic service information data, see section 7.6.11.

7.15 Session-Priority

This information element indicates the session's priority level to the HSS. See 3GPP TS 29.229 [7].

7.16 One Time Notification

This information element indicates that the sender requests to be notified only one time. After the notification, the HSS shall remove the subscription. See 3GPP TS 29.329 [5] for the list of possible values.

7.17 Repository Data ID

This information element includes the service indication and the sequence number of a repository data. See 3GPP TS 29.329 [5] for the detailed definition of this AVP.

7.18 Pre-paging Supported

This information element indicates whether Pre-paging is supported by the AS. See 3GPP TS 29.329 [5] for the detailed definition of this AVP.

7.19 Local Time Zone Indication

This information element indicates that the Local Time Zone information (Time Zone and Daylight Saving Time) of the location in the visited network where the UE is attached for the requested domain and the requested nodes (if included) is requested and indicates whether only the Local Time Zone is required or the Local Time Zone is required together

with other location data. If only the Local Time Zone is required, other location information (e.g. Global Cell ID, Tracking Area ID) may be absent.

This information element is only applicable to Location Information.

7.20 UDR Flags

This information element carries the following indication (see 3GPP 29.329 [5] for coding details):

- Location Information EPS Supported

Location Information EPS Supported shall be only applicable if CS Location Information is requested.

- RAT Type Requested

RAT Type Requested shall be only applicable if PS Location Information is requested

7.21 Call Reference Info

This information element contains information used for MTRR (see 3GPP TS 23.018 [10]):

- Call Reference Number (see 7.22)
- AS-Number (see 7.23)

The HSS uses this information to populate the parameters callReferenceNumber and gmsc-Address within MAP-Provide-Roaming-Number.

7.22 Call Reference Number

This information element contains a temporary reference number identifying the call in progress (see 3GPP TS 23.018 [10]).

7.23 AS-Number

This information element contains the Application Server's E.164 Number.

8 Protocol version identification

See 3GPP TS 29.329 [5].

9 Operational Aspects

See 3GPP TS 29.329 [5].

Annex A (normative): Mapping of Sh operations and terminology to Diameter

A.1 Introduction

This appendix gives mappings from Sh to Diameter protocol elements. Diameter protocol elements are defined in 3GPP TS 29.329 [5].

A.2 Sh message to Diameter command mapping

The following table defines the mapping between stage 2 operations and Diameter commands:

Table A.2.1: Sh message to Diameter command mapping

Sh message	Source	Destination	Command-Name	Abbreviation
Sh-Pull	AS	HSS	User-Data-Request	UDR
Sh-Pull Resp	HSS	AS	User-Data-Answer	UDA
Sh-Update	AS	HSS	Profile-Update-Request	PUR
Sh-Update Resp	HSS	AS	Profile-Update-Answer	PUA
Sh-Subs-Notif	AS	HSS	Subscribe-Notifications-Request	SNR
Sh-Subs-Notif Resp	HSS	AS	Subscribe-Notifications-Answer	SNA
Sh-Notif	HSS	AS	Push-Notification-Request	PNR
Sh-Notif Resp	AS	HSS	Push-Notification-Answer	PNA

A.3 Void

Annex B (informative): Message flow

B.1 Message flows

The following message flows give examples regarding which Diameter messages shall be sent in scenarios described in 3GPP TS 23.218 [4].

B.1.1 Data Update, Registration, Notification Subscription.

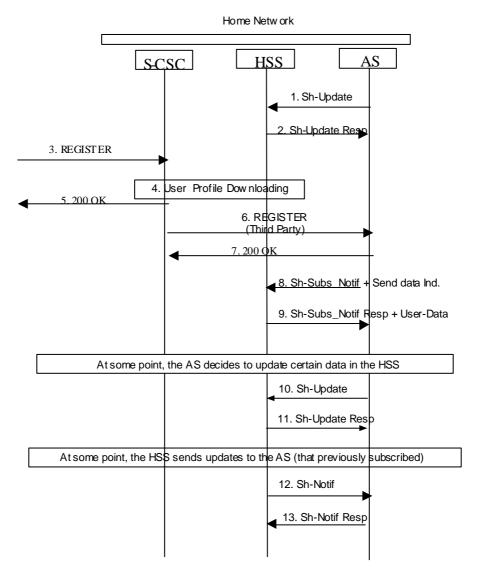

Figure B.1.1: Data Update, Registration, Notification Subscription

- 1. A user subscribes to a new service. The operator provisions the service in an AS. The AS stores some service data for a user in the HSS, Sh-Update (user identity, updated data) e.g. repository data.
- 2. HSS confirms the data is updated
- 3. Some time later, user registers with the network

- 4. S-CSCF downloads the data from the HSS (during the procedure S-CSCF Registration Notification on Cx interface). Filter criteria specify that the AS wants to be notified that the end user is registered.
- 5. 200 OK
- 6. S-CSCF sends third party registration message to the application server to notify that user is registered.
- 7. 200 OK
- 8. The AS subscribes to notifications and downloads data needed for providing service from HSS, by means of Sh-Subs-Notif (user identity, requested data, service information and send data indication).
- 9. HSS confirms the subscription request and sends data to AS
- 10. At some moment, the AS decides to update user"s service data e.g. repository data in the HSS, by means of Sh-Update (user identity, updated data).
- 11. The HSS confirms the service data is updated.
- 12. At some moment, user data is updated in the HSS. As the AS subscribed to notifications (step 8), the HSS sends to the AS the requested updates, by means of Sh-Notif (user identity, updated data).
- 13. The AS acknowledges the notification.

Annex C (informative): UML model of the data downloaded over Sh interface

The purpose of this UML model is to define in an abstract level the structure of the data downloaded over the Sh interface and describe the purpose of the different information classes included in it.

C.1 General description

The following picture gives an outline of the UML model of the user profile, which is exchanged between the HSS and an AS:

Figure C.1.1: Sh-Data

Each instance of the Sh-Data class contains 0 or 1 instance of the class PublicIdentifiers, 0 or n instance of the class IMSPrivateUserIdentity, 0 or n instances of the class RepositoryData, 0 or 1 instance of the class Sh-IMS-Data, 0 or 1 instance of the class CSUserState, 0 or 1 instance of the class PSUserState 0 or 1 instance of the class CSLocationInformation and 0 or 1 instance of the class PSLocationInformation, 0 or 1 instance of the class

RegisteredIdentities, 0 or 1 instance of the class ImplicitIdentities, 0 or 1 instance of the class AllIdentities, 0 or 1 instance of the class AliasIdentities, and 0 or 1 instance of the class DeletedIdentities.

If AS and HSS both support the Notif-Eff feature and AS requires more than one identity sets of a public identity, or it has subscribed to be notifed of changes to IMSPublicIdentity (see table 7.6.1), the class PublicIdentifiers shall not be used to convey IMS Public Identities (it shall however still be used to convey the MSISDNs if so requested). Instead the classes RegisteredIdentities, ImplicitIdentities, AllIdentities and AliasIdentities shall be used and they contain the REGISTERED_IDENTITIES, IMPLICIT_IDENTITIES, ALL_IDENTITIES and ALIAS_IDENTITIES associated with the IMS Public Identity included in the request respectively, See Table 6.1.1.1 for the detailed information. The class PublicIdentifiers or the one among the four which may be used to contain the corresponding identity set can both be used to convey IMS Public Identities when AS requires only one identity set of a public identity.

If AS or HSS do not support the Notif-Eff feature, the classes RegisteredIdentities, ImplicitIdentities and AllIdentities shall not be used. Instead the class PublicIdentifiers shall be used.

If Public Identity(ies) are deleted and the AS has subscribed to be notified of changes to IMSPublicIdentity(see table 7.6.1), the class DeletedIdentities shall not be used. If Public Identity(ies) are deleted and the AS has not subscribed to be notified of changes to IMSPublicIdentity but has any other subscription active for the deleted identity(ies), the HSS shall notify the AS of the deletion of the identity(ies) using the class DeletedIdentities.

Class RepositoryData contains repository data (transparent data) for a given service that are associated to a Public user Identity or a group of alias Public User Identities. It has attributes ServiceIndication, SequenceNumber and ServiceData.

Class CSUserState contains the state of a user in the CS domain. Its only attribute, State, is an enumeration whose possible values are defined in section 7.6.7.

Class PSUserState contains the state of a user in the PS domain (SGSN). Its only attribute, State, is an enumeration whose possible values are defined in section 7.6.7.

NOTE: the fact that attribute State is an enumeration is a difference from what can be carried in the MAP protocol.

Class EPSUserState contains the state of a user in the PS domain (MME). Its only attribute, State, is an enumeration whose possible values are defined in section 7.6.7.

Class CSLocationInformation has the attributes Location Number, Service Area ID, GlobalCellId, LocationAreaId, GeographicalInformation, GeodeticInformation, VLR Number, MSC Number, AgeOfLocationInformation, CurrentLocationRetrieved and UserCSGInformation. They are defined in 7.6.

Class PSLocationInformation has the attributes ServiceAreaId, GlobalCellId, LocationAreaID, RoutingAreaID, GeographicalInformation, GeodeticInformation, SGSN Number, AgeOfLocationInformation, CurrentLocationRetrieved, UserCSGInformation, VisitedPLMNID, LocalTimeZone and RAT-Type. They are defined in 7.6.

Class EPSLocationInformation has the attributes E-UTRANCellGlobalId, TrackingAreaID, GeographicalInformation, GeodeticInformation, MME Name, AgeOfLocationInformation, CurrentLocationRetrieved, UserCSGInformation, VisitedPLMNID and LocalTimeZone. They are defined in 7.6.

Class TWANLocationInformation has the attributes TWAN-SSID, TWAN-BSSID, TWAN-PLMNID, CivicAddress, TWANOperatorName, LocalTimeZone and Logical-Access-ID. They are defined in 7.6.

Class DeletedIdentities contains Public Identities (IMS Public User Identities or Public Service Identities) removed from the HSS.

Class UEReachabilityForIP contains the UE reachability for IP. Its attributes, UEIPReachabilityMME and UEIPReachabilitySGSN, are enumerations whose possible values are defined in section 7.6. 17.

Class IMSVoiceOverPSSessionsSupport contains the support of IMS voice over PS at the current access. Its only attribute, SupportIndication, is an enumeration whose possible values are defined in section 7.6.18.

Class IMSI contains the UE's IMSI. See subclause 7.6.24.

Class IMSPrivateUserIdentity contains an IMS Private Identity associated with the IMS Public Identity included in the request.

C.2 PublicIdentifiers

The following picture details the UML model of the class PublicIdentifiers:

Figure C.2.1: The UML model of the class PublicIdentifiers

Class PublicIdentifiers contains 0 or more public user identities which may be either of class IMSPublicIdentity or of class MSISDN. The identifiers are of format SIP URL, tel URI or MSISDN. Instances of class IMSPublicIdentity shall contain a Public User Identity, a distinct PSI or an identity matching a Wildcarded PSI or a Wildcarded Public User Identity in the HSS. They shall contain the Identity Type and the wildcarded identity if the Identity in the request matches a wildcarded identity in the HSS.

When Additional-MSISDN feature is enabled, class PublicIdentifiers contains class ExtendedMSISDN in addition to MSISDN, as described in following figure:

Figure C.2.2: The UML model of the class PublicIdentifiers (Additional-MSISDN feature)

Class ExtendedMSISDN contains one MSISDN and one attribute that indicates the MSISDN type as follows:

- 0: Additional MSISDN. See 3GPP TS 23.003 [11] for the definition of Additional-MSISDN.

C.3 Sh-IMS-Data

The following picture details the UML model of the class Sh-IMS-Data.

Figure C.3.1: Sh-IMS-Data

Each instance of the class Sh-IMS-Data contains 0 or 1 instance of the class S-CSCFName, 0 to 1 instance of the class IFCs, 0 or 1 instance of the class IMSUserState, 0 or 1 instance of the class ChargingInformation, 0 or 1 instance of the class PSIActivation, 0 or 1 instance of the class DSAI, 0 or 1 instance of the class ServiceLevelTraceInfo, 0 or 1 instance of the class IPAddressSecureBindingInformation, and 0 to n instances of the class ReferenceLocationInformation.

Class S-CSCFName contains a SIP URI. See section 7.6.4 for further details.

Class IFCs contains 0 to n instances of the initial filter criteria of the multimedia public identity that the AS included in the request. The initial filter criteria is defined in 3GPP TS 29.228 [6].

Class IMSUserState contains the registration state of the identity given by the attribute of class Sh-IMS-Data. See section 7.6 for possible values.

Class Charging Information contains the online and offline charging function addresses. See section 7.6 for possible values.

Class PSIActivation contains the activation state of the Public Service Identity given by the attribute of class Sh-IMS-Data. See section 7.6 for possible values.

Class DSAI contains the DSAI Tag and a DSAI Value (reflecting the activation state) for services the user is subscribed to. See section 7.14 for contents and usage.

Class ServiceLevelTraceInfo contains the Service Level Trace configuration information to enable the Application Server to perform service level tracing related to a specific Public Identifier. See section 7.6.13 for contents and usage.

Class IPAddressSecureBindingInformation contains either 0 or one IPv4 address, either 0 or one IPv6 prefix and/or IPv6 interface identifier. See section 7.6.14 for contents and usage.

Class ServicePriorityLevel contains the Service Priority Level allowed for the Public Identity to be used for priority services. See section 7.6.15 for contents and usage.

Class SMSRegistrationInfo contains the IP-SM-GW-Number and the Service Centre Address. See section 7.6.16 for further details.

Class Enhanced SRVCC contains the Session Transfer Number (see 3GPP TS 23.003 [11] and the SRVCC Capability of the UE (see 3GPP TS 23.237 [32]). See 7.6.20 and 7.6.21 respectively for further details.

Class ExtendedPriority contains the PriorityNamespace and the PriorityLevel information elements. See Section 7.6.15A for further details.

Class Reference Location Information contains zero or one attribute AccessType, zero or one attribute AccessInfo, and zero or one attribute AccessValue, see 3GPP TS 29.228 [6].

Annex D (normative): XML schema for the Sh interface user profile

The file ShDataType_Rel8.xsd, attached to this specification, contains the XML schema for the user profile that is sent over the Sh interface. The user profile XML schema defines the data types that are used in the user profile XML. The data that is allowed to be sent in the user profile may vary depending on the features supported by the Diameter end points, see 3GPP TS 29.329 [5]. The user profile XML schema file is intended to be used by an XML parser. The version of the Sh application sending the user profile XML shall be the same as the version of the sent user profile XML and thus it implies the version of the user profile XML schema to be used to validate it.

Tables D.1 and D.2 describe the data types and the dependencies among them that configure the user profile XML schema.

Table D.1: XML schema for the Sh user profile interface: simple data types

Data type	Tag	Base type	Comments
tPriority	Priority	integer	>= 0
tProfilePartIndicator	ProfilePartIndicator	enumerated	Possible values: 0 (REGISTERED) 1 (UNREGISTERED)
tGroupID	Group	integer	>= 0
tRegistrationType	RegistrationType	enumerated	Possible values: 0 (INITIAL_REGISTRATION) 1 (RE-REGISTRATION) 2 (DE-REGISTRATION)
tDefaultHandling	DefaultHandling	enumerated	Possible values: 0 (SESSION_CONTINUED) 1 (SESSION_TERMINATED)
tDirectionOfRequest	SessionCase	enumerated	Possible values: 0 (ORIGINATING_SESSION) 1 TERMINATING_SESSION 2 (TERMINATING_UNREGISTERED) 3 (ORIGINATING_UNREGISTERED) 4 (ORIGINATING_CDIV)
tIMSUserState	IMSUserState	Enumerated	Possible values: 0 (NOT_REGISTERED) 1 (REGISTERED) 2 (REGISTERED_UNREG_SERVICES) 3 (AUTHENTICATION_PENDING)
tCSUserState	CSUserState	Enumerated	Possible values (as defined in 3GPP TS 23.078 [14]): 0 (CAMELBusy) 1 (NetworkDeterminedNotReachable) 2 (AssumedIdle) 3 (NotProvidedfromVLR)
tPSUserState	PSUserState	Enumerated	Possible values (as defined in 3GPP TS 23.078 [14]): 0 (Detached) 1 (AttachedNotReachableForPaging) 2 (AttachedReachableForPaging) 3 (ConnectedNotReachableForPaging) 4 (ConnectedReachableForPaging) 5 (NotProvidedFromSGSN or MME) 6 (NetworkDeterminedNotReachable)
tLocationNumber	LocationNumber	string	Syntax described in ITU-T Q.763 [9] (Base64 encoded according to IETF RFC 2045 [15]). Length >=4 and <=16 (multiples of 4).
tCellGloballd	CellGloballd	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 12.
tServiceAreald	ServiceAreald	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 12.

tLocationAreald	LocationAreald	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 8.
tRoutingAreald	RoutingAreald	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 8.
tGeographicalInformation	GeographicalInformation	string	Syntax described in 3GPP TS 29.002 (base 64 encoded according to IETF RFC 2045). Length = 12.
tGeodeticInformation	GeodeticInformation	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 16.
tAgeOfLocationInformation	AgeOfLocationInformation	integer	>=0, <=32767
tCSGId	CSGId	string	Syntax described in 3GPP TS 29.002 [13] i.e. 5 octets BER encoded value of 27-bit BIT STRING (Base64 encoded according to IETF RFC 2045 [15]). Length = 8.
tAccessMode	AccessMode	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 4.
tTrackingAreald	TrackingAreald	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 8.
tE-UTRANCellGlobalId	E-UTRANCellGloballd	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length = 12.
tAddressString	Address	string	Syntax described in 3GPP TS 29.002 [13] (Base64 encoded according to IETF RFC 2045 [15]). Length >= 4 and <=28 (multiples of 4).
tMSISDN	MSISDN, STN-SR, CSRN	string	Number structure described in 3GPP TS 23.003 [11]. ASCII encoded according to ANSI X3.4 [20].
tSIP_URL	IMSPublicIdentity	anyURI	Syntax described in IETF RFC 3261 [16]
tTEL_URL	IMSPublicIdentity	anyURI	Syntax described in IETF RFC 3966 [17]
tDiameterURI	DiameterURI	string	Syntax of a Diameter URI as described in IETF RFC 3588 [8]
tIMSPublicIdentity	IMSPublicIdentity	(union)	Union of tSIP_URL and tTEL_URL
tldentityType	IdentityType	enumerated	Possible values: 0 (PUBLIC_USER_IDENTITY) 1 (DISTINCT_PSI) 2 (WILDCARDED_PSI) 3 (WILDCARDED_IMPU)
tWildcardedPSI	WildcardedPSI	anyURI	Syntax described in 3GPP TS 23.003 [11].
tWildcardedIMPU	WildcardedIMPU	anyURI	Syntax described in 3GPP TS 23.003 [11].
tServiceInfo tDSAI-Tag	ServiceInfo DSAI-Tag	string	
tString	RequestURI, Method, Header, Content, Line, MMEName, AccessType, AccessInfo, AccessValue	string string	
tBool	ConditionTypeCNF, ConditionNegated	boolean	Possible values: 0 (false) 1 (true)
tSequenceNumber tPSIActivation	SequenceNumber PSIActivation	integer enumerated	>=0, <=65535 Possible Values: 0 (INACTIVE) 1 (ACTIVE)
tDSAI-Value	DSAI-Value	enumerated	Possible values are: 0 (ACTIVE) 1 (INACTIVE)
tServiceLevelTraceInfo	ServiceLevelTraceInfo	String	Syntax described in clause 14 within IETF draft-dawes-sipping-debug [21]
tlPv4Address	IPv4Address	String	Syntax described in IETF RFC 791 [23] Length = 4
tlPv6Prefix	IPv6Prefix	String	Syntax described in IETF RFC 4291 [24] Length >= 0 and <= 16

ALD: CA data a	ID. CA data as	Ctuin a	Constant described in IETE DEC 4004 [04]
tlPv6Address	IPv6Address	String	Syntax described in IETF RFC 4291 [24] Length >= 0 and <= 16
tServicePriorityLevel	ServicePriorityLevel	enumerated	Possible values:
			0 (Highest priority)
			1 2
			3
			4 (Lowest priority)
tUEIPReachabilityMME	UEIPReachabilityMME	enumerated	Possible values:
			0 (REACHABLE)
			,
tUEIPReachabilitySGSN	UEIPReachabilitySGSN	enumerated	Possible values:
			0 (REACHABLE)
ID ON OWN	15 014 014/11	0	0 / 1 / 1 0000 70 00 000107
tIP-SM-GW-Number tIMSVoiceOverPSSessionSupport	IP-SM-GW-Number IMSVoiceOverPSSessionSupport	String enumerated	Syntax described in 3GPP TS 23.008[27] Possible Values:
tilvis voiceOverPssessionSupport	INS voiceOverPSSessionSupport	enumerated	0 (IMS-VOICE-OVER-PS-NOT-
			SUPPORTED)
			1 (IMS-VOICE-OVER-PS-SUPPORTED)
			2 (IMS-VOICE-OVER-PS-SUPPORT-
			UNKNOWN)
tRATtype	RATtype	enumerated	Possible Values are defined in 3GPP TS
			29.212 [28], subclause 5.3.31
tDateTime	LastUEActivityTime	dateTime	Possible Values:
tUE-SRVCC-Capability	UE-SRVCC-Capability	enumerated	0 (UE-SRVCC-CAPABILITY-NOT-
			SUPPORTED)
			1 (UE-SRVCC-CAPABILITY-
			SUPPORTED)
tPriorityNamespace	PriorityNamespace	string	Possible values are those of the
			namespaces that are defined in IETF RFC
			4412 [25] or defined according to the IANA
			registration procedure described in IETF RFC 4412 [25] for Resource-Priority
			Namespaces.
tPriorityLevel	PriorityLevel	string	Possible values depend on the
, , , , , , , , , , , , , , , , , , , ,		3	PriorityNamespace and are specified with
			the associated namespace that is defined
			in IETF RFC 4412 [25] or defined
			according to the IANA registration procedure described in IETF RFC 4412
			[25] for Resource-Priority Namespaces.
tSCAddress	SCAddress	string	Syntax described in 3GPP TS 29.002 [13]
tVisitedPLMNID	VisitedPLMNID	string	Consists of Mobile Country Code (MCC)
	1.0.100.1 21.2	Jg	and Mobile Network Code (MNC) as
			described in 3GPP TS 23.003 [11]. It is a
			string with 3 digits MCC and 2 or 3 digits
tTimeZene	TimeZana	adula	MNC.
tTimeZone tDaylightSavingTime	TimeZone	string	Syntax described in 3GPP TS 29.272 [26] Possible values are defined in 3GPP TS
IDAVIONI SAVINO I IME	Doublight Couring Time a		
12 a)g 2 a	DaylightSavingTime	enumerated	
			29.272 [26].
tMSISDNType	DaylightSavingTime MSISDNType	enumerated	29.272 [26]. Possible values:
			29.272 [26].
tMSISDNType	MSISDNType	enumerated	29.272 [26]. Possible values: 0 (ADDITIONAL) Number structure described in 3GPP TS 23.003 [11]. ASCII encoded according to
tMSISDNType tIMSI	MSISDNType IMSI	enumerated string	29.272 [26]. Possible values: 0 (ADDITIONAL) Number structure described in 3GPP TS 23.003 [11]. ASCII encoded according to ANSI X3.4 [20].
tMSISDNType tIMSI tTWAN-SSID	MSISDNType IMSI TWAN-SSID	enumerated string string	29.272 [26]. Possible values: 0 (ADDITIONAL) Number structure described in 3GPP TS 23.003 [11]. ASCII encoded according to ANSI X3.4 [20]. Syntax described in 3GPP TS 29.273 [34].

NOTE 1: 'n' shall be interpreted as non-bounded.

NOTE 2: At least one of these two information elements (PrimaryEventChargingFunctionName or PrimaryChargingCollectionFunctionName) shall be present.

NOTE 3: The syntax of AccessType, AccessInfo and AccessValue is as described in 3GPP TS 29.228 [6].

NOTE 4: empty cells shall be interpreted as complex XML elements without defined content.

NOTE 5: PublicIdentifiers contains ExtendedMSISDN in addition to MSISDN when Additional-MSISDN feature is enabled.

Annex E (informative): T-ADS request handling in the HSS

E.1T-ADS request handling in the HSSThe following figure shows a possible detailed handling of T-ADS Information request in the HSS:

When receiving a T-ADS request from an Application Server, the HSS checks whether serving nodes (i.e. SGSN and/or MME) are registered (and not purged).

If neither MME nor SGSN is registered, a response indicating that IMS voice over PS sessions is not supported is returned to the Application Server. UE Activity Time and the Last RAT Type are not reported.

If both MME and SGSN are registered but the registered SGSN is a Gn/Gp-SGSN, the HSS treats the MME as not registered in the following T-ADS request handling.

Otherwise,

if in the previous ULR(s) the AVP Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions was received from all the registered serving nodes with the same value (either with SUPPORTED or NOT_SUPPORTED), a response with the received value is returned to the Application Server. UE Activity Time and the Last RAT Type are not reported.

- if in previous ULRs the AVP Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions was received from all the registered serving nodes but with different values, the HSS continues processing as follows:
 - if MME or SGSN (or both) did not indicated support of T-ADS Data Retrieval within the previous ULR, a response indicating IMS-VOICE-OVER-PS-SUPPORT-UNKNOWN is returned to the Application Server. UE Activity Time and the Last RAT Type are not reported.
 - otherwise the HSS retrieves T-ADS Data from MME and from SGSN. After retrieval, the HSS returns a response to the Application Server indicating the response from MME or SGSN whichever reported the most recent UE Activity Time. UE Activity Time and the Last RAT Type are also reported.
- if in the previous ULR(s) the AVP Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions was not received from at least one of the registered serving nodes, the HSS continues processing as follows:
 - if at least one of the registered serving nodes that did not send an Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions AVP within the previous ULR did not indicate support of T-ADS Data Retrieval within the previous ULR, a response indicating IMS-VOICE-OVER-PS-SUPPORT-UNKNOWN is returned to the Application Server. UE Activity Time and the Last RAT Type are not reported.
 - otherwise the HSS retrieves T-ADS Data from all the registered serving nodes that did not send an Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions AVP within the previous ULR. When all responses are received the HSS continues processing as follows:
 - if two T-ADS Data responses were receive (one from MME and one from SGSN), the HSS returns a response to the Application Server indicating the response from MME or SGSN whichever reported the most recent UE Activity Time. UE Activity Time and the Last RAT Type are also reported.
 - if one T-ADS Data response was received (from MME or SGSN) and the other serving node (SGSN or MME) was not registered, the HSS returns a response to the Application Server indicating the response from responding serving node. UE Activity Time and the Last RAT Type are also reported.
 - if one T-ADS Data response was received (from MME or SGSN) and the other serving node (SGSN or MME) has sent an Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions AVP within the previous ULR, the HSS continues processing as follows:
 - if information about support / non-support of IMS voice over PS sessions from both serving nodes are identical, the HSS returns this information to the Application Server. UE Activity Time and the Last RAT Type are not reported.
 - if information about support / non-support of IMS voice over PS sessions from both serving nodes are not identical, the HSS continues processing as follows:
 - if the serving node that sent an Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions AVP within the previous ULR did not indicate support of T-ADS Data Retrieval within the previous ULR, a response indicating IMS-VOICE-OVER-PS-SUPPORT-UNKNOWN is returned to the Application Server. UE Activity Time and the Last RAT Type are not reported.
 - otherwise the HSS retrieves T-ADS Data from the serving node that sent an Homogeneous-Support-of-IMS-Voice-Over-PS-Sessions AVP within the previous ULR. When the response is received, the HSS returns a response to the Application Server indicating the response from MME or SGSN whichever reported the most recent UE Activity Time. UE Activity Time and the Last RAT Type are also reported.

Annex F (normative): Diameter overload control mechanism

F.1 General

Diameter overload control mechanism is an optional feature.

IETF draft-ietf-dime-ovli-03 [36] specifies a Diameter overload control mechanism which includes the definition and the transfer of related AVPs between Diameter nodes.

It is recommended to make use of IETF draft-ietf-dime-ovli-03 [36] on the Sh interface where, when applied, the AS shall behave as a reacting node and the HSS as a reporting node.

F.2 HSS behaviour

The HSS requests traffic reduction from the AS when it is in an overload situation, including OC-OLR AVP in answer commands as described in IETF draft-ietf-dime-ovli-03 [36].

The HSS identifies that it is in an overload situation by implementation specific means. For example, the HSS may take into account the traffic over the Sh interfaces or other interfaces, the level of usage of internal resources (CPU, memory), the access to external resources, etc.

The HSS determines the specific contents of OC-OLR AVP in overload reports and the HSS decides when to send OC-OLR AVPs by implementation specific means.

F.3 AS behaviour

The AS applies required traffic reduction received in answer commands to subsequent applicable requests, as per IETF draft-ietf-dime-ovli-03 [36].

The AS achieves requested traffic reduction by implementation specific means. For example, the AS may implement message throttling with prioritization or a message retaining mechanism for operations that can be postponed.

Annex G (Informative): Diameter overload node behaviour

G.1 Message prioritization

This clause describes possible behaviours of the AS regarding message prioritization in an informative purpose.

The AS may take the following into account when making throttling decisions:

- Identification of the procedures that can be deferred (e.g. Subscription to notification of Data Update), so to avoid to drop non deferrable procedures;
- Prioritization of certain types of request (e.g. between PUR and SNR) according to the context of their use, in particular:
 - Higher prioritization of commands for AS that are related to a registered user for a service, so to avoid the interruption of the registered service for the user.
 - Lower prioritization of commands for AS that are related to massive subscription data update due to provisioning.

Annex H (informative): Change history
