Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

32.301:	Configuration Management (CM); Notification Integration Reference Point (IRP): Requirements
32.302:	Configuration Management (CM); Notification Integration Reference Point (IRP): Information Service (IS)
32.303:	Configuration Management (CM); Notification Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set (SS)
32.304:	Configuration Management (CM); Notification Integration Reference Point (IRP): Common Management Information Protocol (CMIP) Solution Set (SS)
32.305:	Configuration Management (CM); Notification Integration Reference Point (IRP): eXtensible Markup Language (XML) definition.

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G network as it evolves. CM actions have the objective to control and monitor the actual configuration on the Network Elements (NEs) and Network Resources (NRs), and they may be initiated by the operator or by functions in the Operations Systems (OSs) or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service (QoS). The CM actions are initiated either as a single action on a NE of the 3G network or as part of a complex procedure involving actions on many NEs.

The Itf-N interface is built up by a number of Integration Reference Points (IRPs) and a related Name Convention, which realise the functional capabilities over this interface. The basic structure of the IRPs is defined in 3GPP TS 32.101 [5] and 3GPP TS 32.102 [6].

Network Elements (NEs) under management and element managers generate notifications of events about occurrences within the network. Different kinds of events carry different kinds of information. For instance a new alarm as specified in Alarm IRP: Information Service [1], is one possible kind of event, an object creation as specified in Basic CM IRP: Information Service [8] is another possible kind of event.

Information of an event is carried in notification. An IRPAgent (typically an EM or a NE) emits notifications. IRPManager (typically a network management system) receives notifications. The purpose of Notification IRP is to define an interface through which an IRPManager can subscribe to IRPAgent for receiving notifications.

This IRP bases its design on work captured in ITU-T Recommendation X.734 [2], OMG Notification Service [4]. The central design ideas are:

- Separation of notification Consumers (IRPManagers) from Producers (IRPAgents);
- Notifications are sent to IRPManagers without the need for IRPManagers to periodically check for new notifications.

Common characteristics related to notifications in all other IRPs are gathered in one IRP.

1 Scope

The present document specifies the Common Object Request Broker Architecture (CORBA) Solution Set (SS) for the IRP whose semantics is specified in Notification IRP: Information Service (3GPP TS 32.302 [5]).

This Solution Set specification is related to 3GPP TS 32.302 V6.2.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [7], 3GPP TS 32.102 [8] and 3GPP TS 32.301 [9] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [11].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM Configuration Management

CORBA Common Object Request Broker Architecture (OMG)

EC Event channel (OMG)
EM Element Manager

IDL Interface Definition Language (OMG)
IOR Interoperable Object Reference

IS Information Service

NC Notification Channel (OMG)

NE Network Element NV Name and Value pair OMG Object Management Group

QoS Quality of Service SS Solution Set

UML Unified Modelling Language (OMG)

4 Architectural features

The overall architectural feature of Notification IRP is specified in 3GPP TS 32.302 [5]. This clause specifies features that are specific to the CORBA Solution Set (SS).

4.1 Notification services

In the CORBA Solution Set, notifications are emitted by IRPAgent using CORBA Notification service (OMG TC Document telecom [2]) and Structured Events.

CORBA Event service (OMG CORBA services [3]) provides event routing and distribution capabilities. CORBA Notification service provides, in addition to Event service, event filtering and support for Quality of Service (QoS) as well.

A subset of CORBA Notification services shall be used to support the implementation of notification. This CORBA Notification service subset, in terms of OMG Notification service (OMG TC Document telecom [2]) defined methods, is identified in the present.

4.1.1 Support of Push and Pull Interface

The IRPAgent shall support the OMG Notification push interface model. Additionally, it may support the OMG Notification pull interface model as well.

4.1.2 Support of multiple notifications in one push operation

For efficiency, IRPAgent uses the following OMG Notification Service (OMG TC Document telecom [2]) defined interface to pack multiple notifications and push them to IRPManager using one method push_structured_events. The method takes as input a parameter of type EventBatch as defined in the OMG CosNotification module (OMG TC Document telecom [2]). This data type is a sequence of Structured Events (see clause 4). Upon invocation, this parameter will contain a sequence of Structured Events being delivered to IRPManager by IRPAgent to which it is connected.

The maximum number of events that will be transmitted within a single invocation of this operation is controlled by IRPAgent wide configuration parameter. The amount of time IRPAgent will accumulate individual events into the sequence before invoking this operation is controlled by IRPAgent wide configuration parameter as well.

IRPAgent may push EventBatch with only one Structured Event.

The OMG Notification service (OMG TC Document telecom [2]) defined IDL module is shown below.

4.1.3 Support of filterable and non-filterable notification parameters

The OMG Notification service defined IDL CosNotification::StructuredEvent and CosNotification::EventBatch data types are shown below.

```
struct StructuredEvent {
    EventHeader header;
    FilterableEventBody filterable_data;
    any remainder_of_body;
}; // StructuredEvent

typedef sequence<StructuredEvent> EventBatch;
```

Notification IS parameters are mapped:

- either to the Structured Event header, i.e. above IDL StructuredEvent data structure field header;
- or to the Structured Event body, and in this case:
 - when defined in the IS as filterable, to the Structured Event filterable body fields, i.e. above IDL StructuredEvent data structure field filterable_data;
 - when defined in the IS as non-filterable, to the Structured Event remaining body, i.e. above IDL StructuredEvent data structure field remainder_of_body.

The OMG Notification service defined IDL CosNotification::FilterableEventBody data type and its supporting types are shown below.

```
struct Property {
    PropertyName name;
    PropertyValue value;
};

typedef sequence<Property> PropertySeq;

typedef PropertySeq FilterableEventBody;
```

In order to ensure uniform implementation for notification IS parameters mapped to Structured Event Name-Value pairs whether defined in the IS as filterable or as non-filterable, IDL StructuredEvent data structure field remainder_of_body of type any shall be mapped to the IDL data structure

NotificationIRPNotifications::NonFilterableEventBody defined in annex clause A.5:

```
struct NonFilterableEventBody {
    CosNotification::PropertySeq name_value_pairs;
    any remainder_of_non_filterable_body;
};
```

5 Mapping

5.1 Operation mapping

Notification IRP: IS (3GPP TS 32.302 [5]) defines semantics of operations visible across this IRP. These operations are the operations of the IOCs defined in 3GPP TS 32.302 [5].

Table 1 maps the operations defined in Notification IRP: IS (3GPP TS 32.302 [5]) to their equivalents (methods) in this Solution Set (SS). Specifically, the table 1 maps the operations of the IOCs defined in 3GPP TS 32.302 [5] to their equivalents in this SS. Since one of the IOCs, the NotificationIRP IOC, inherits from the ManagedGenericIRP IOC [4], the table 1 also maps the operations of ManagedGenericIRP IOC to their equivalents (methods) in this SS.

Table 1 also qualifies if a method is Mandatory (M) or Optional (O).

Table 1: Mapping from IS Operation to SS Equivalents

IS Operations in 3GPP TS 32.302 [5]	SS Methods	Qualifier
subscribe	attach_push, attach_push_b, attach_pull	M, O, O
unsubscribe	detach	М
getIRPVersion (see note.)	get_notification_irp_versions	М
getSubscriptionStatus	get_subscription_status	0
getSubscriptionIds	get_subscription_ids	0
changeSubscriptionFilter	If subscription is established using attach_push method, the SS equivalent shall be change_subscription_filter. The IDL specification of this method is included in annex A. This method is Optional (O).	See box on the left.
	If subscription is established using attach_push_b method, the SS equivalent shall be modify_constraints. The method is defined in OMG Notification Service Filter Interface (OMG TC Document telecom [2]). The IDL specification of this method is not included in annex A. If IRPAgent supports the optional attach_push_b method, it shall support this method as mandatory.	
	If subscription is established using attach_pull method, the SS equivalent shall be modify_constraints. The method is defined by OMG Notification Service Filter Interface (OMG TC Document telecom [2]). The IDL specification of this method is not included in annex A. If IRPAgent supports the optional attach_pull method, it shall support this method as mandatory.	
suspendSubscription	If subscription is established using attach_push, there is no SS equivalent. In other words, IRPManager cannot suspend subscription.	See box on the left.
	If subscription is established using attach_push_b, the SS equivalent shall be suspend_connection. This method is defined by OMG Notification Service (OMG TC Document telecom [2]). The IDL specification of this method is not included in annex A. If IRPAgent supports the optional attach_push_b method, it shall support this method as mandatory.	
	If subscription is established using attach_pull, there is no SS equivalent.	
resumeSubscription	If subscription is established using attach_push, there is no SS equivalent. In other words, IRPManager cannot resume subscription.	See box on the left.
	If subscription is established using attach_push_b, the SS equivalent shall be resume_connection. This method is defined by OMG Notification Service (OMG TC Document telecom [2]). The IDL specification of this method is not included in annex A. If IRPAgent supports the optional attach_push_b method, it shall support this method as mandatory.	
	If subscription is established using attach_pull, there is no SS equivalent.	
getNotificationCategories	get_notification_categories	0
getOperationProfile (see note.)	get_notification_irp_operations_profile	0
getNotificationProfile (see note.)	get_notification_irp_notification_profile	0
NOTE: These 3 operation	ons are operations of ManagedGenericIRP IOC specified in 3GPP TS 32.312 [4]. The OC of 3GPP TS 32.302 [5] inherits from it.	ne

5.2 Operation parameter mapping

3GPP TS 32.302 [5] defines semantics of parameters carried in operations across the Notification IRP. Table 2 through table 14 indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table 2: Mapping from IS subscribe parameters to SS attach_push equivalents

IS Operati	ion parameter	SS Method parameter	Qualifier
managerRefe	erence	string manager_reference (see note 1)	М
timeTick		unsigned long time_tick	0
notificationCa	ategories	NotificationIRPConstDefs::NotificationCategorySet notification_categories	0
filter		ManagedGenericIRPConstDefs::StringOpt filter (see note 2)	0
subscription	ld	Return value of type NotificationIRPConstDefs::SubscriptionId	М
status		Attach, ManagedGenericIRPSystem::ParameterNotSupported, ManagedGenericIRPSystem::InvalidParameter, AlreadySubscribed, AtLeastOneNotificationCategoryNotSupported	М
NOTE 1: IRPManager creates a CosNotifyComm::SequencePushConsumer object and invokes CORBA::ORB::object_to_string to obtain the stringified IOR, say s1. IRPManager stores the s1. IRPManager sends s1 as input parameter of attach_push to IRPAgent. IRPAgent receives s1, performs CORBA::ORB::string_to_object to obtain the IRPManager's IOR and uses it for its future methods. IRPAgent also stores the s1 for future comparisons. IRPManager later calls detach with s1. IRPAgent receives the stringified IOR s1, compares it with those stored stringified IORs (e.g. s1), finds a match, and performs the detach process. IRPAgent pushes sequence of Structured Events towards IRPManager via the CosNotifyComm::SequencePushConsumer object push_structured_events method, depending on the supplied notification categories and filter.		. IRPAgent ves the orms the	
	2: The grammar of the filter string is extended_TCL defined by OMG Notification Service (OMG TC Document telecom [2]). This SS and the Alarm IRP: CORBA SS [10] shall use this grammar only.		Document

Table 3: Mapping from IS subscribe parameters to SS attach_push_b equivalents

IS Operation parameter	SS Method parameter	Qualifier

5.3 Notification parameter mapping

Notification IRP: IS (3GPP TS 32.302 [5]) defines the semantics of common attributes carried in notifications. This SS does not provide the mapping of these attributes to their CORBA SS equivalents. Other IRPs such as Alarm IRP: IS (3GPP TS 32.111-2 [6]) identify and qualify these common attributes for use in their environment. Their corresponding SS documents define the mapping of these attributes to their SS equivalents.

6 IRPAgent's Behaviour

This clause describes some IRPAgent's behaviour not captured by IDL.

6.1 Subscription

IRPManager can invoke multiple attach_push, multiple attach_push_b or multiple attach_pull using different manager_reference(s). As far as IRPAgent is concerned, the IRPAgent will emit notifications to multiple "places" with their independent filter requirements. IRPAgent will not know if the notifications are going to the same IRPManager.

If IRPManager invokes multiple attach_push, attach_push_b or attach_pull using the same manager_reference and with an already subscribed notification_category, IRPAgent shall raise AlreadySubscribed exception to all invocations except one.

IRPManager can invoke multiple attach_push using the same manager_reference and with one or more not-yet-subscribed notification_categories. In this case, if IRPAgent supports all the notification categories requested, IRPAgent shall accept the invocation; otherwise, it raises

AtLeastOneNotificationCategoryNotSupported exception. IRPAgent shall have similar behaviour for attach_push_b and attach_pull.

When IRPManager is in subscription by invoking attach_push, IRPManager can change the filter constraint, using change_subscription_filter, applicable to the notification categories specified in the attach_push.

When IRPManager is in subscription by invoking attach_push_b, IRPManager can change the filter constraint during subscription using the OMG defined Notification Service Filter Interface. IRPManager shall not use change subscription filter; otherwise it shall get an exception.

6.2 IRPAgent supports multiple categories of Notifications

IRPAgent may emit multiple categories of Notifications. IRPAgent may have mechanism for IRPManager to pull for notifications of multiple categories.

IRPManager can query IRPAgent about the categories of notifications supported by using get_notification_categories.

IRPManager uses a parameter, notification_categories, in attach_push, attach_push_b and attach_pull to specify one or more categories of notifications wanted.

IRPManager uses a zero-length sequence in notification_categories of attach_push, attach_push_b and attach_pull to specify that all IRPAgent supported categories of notifications are wanted. If IRPManager uses attach_push with zero-length sequence in notification_categories and if the operation is successful, IRPAgent shall reject subsequent attach_push operation, regardless if the notification_categories contains a zero-length sequence or one or more specific notification categories. IRPAgent shall have similar behaviour for attach_push_b and attach_pull.

6.3 IRPAgent's integrity risk of attach_push_b Method

In the case that IRPAgent implements this method by extending or using OMG compliant Notification Service, the following IRPManager behaviour illustrates a risk to IRPAgent's integrity.

Given the object reference (IOR) of the SequenceProxyPushSupplier (as the mandatory output parameter of the subject method), IRPManager can invoke SequenceProxyPushSupplier.MyAdmin method.

IRPManager can then obtain the consumer admin object of the proxy. Then IRPManager can invoke ConsumerAdmin.MyChannel to get the IOR of the Notification Channel. IRPManager then can call EventChannel.MyFactory which will provide IRPManager the IOR of the EventChannelFactory itself. IRPManager can then able to invoke methods directly on the EventChannelFactory, like get_all_channels which lists all channel numbers and create_channel which allows IRPManager to create any number of additional channels

A malicious IRPManager can, given access to the EventChannelFactory, get a list of existing channels and start connecting them together at random thus compromising the IRPAgent's integrity. Deployment of this attach_push_b needs strong authentication and authorisation mechanism in place.

The attach push is mandatory. IRPAgent compliant to this IRP shall support it.

The attach_push_b is optional. It is recommended that IRPAgent concerned with integrity risk should not support the attach push b option.

6.4 Quality of Service Parameters

The OMG Notification Service [2] supports a variety of Quality of Service (QoS) properties, such as reliability and priority, that may be expressed to indicate the delivery characteristics of notifications. The following OMG Notification Service QoS parameter settings shall be required when the IRPAgent uses the OMG Notification Service to support this SS:

- 1. The order policy shall be set to FifoOrder (First-in, First-out) [2].
- 2. The message priority shall be set to 0, i.e. no priority [2].
- 3. The Start Time Supported shall be set to false, i.e. do not use Start Time [2].
- 4. The Stop Time Supported shall be set to false, i.e. do not use Stop Time [2].

When the OMG Notification Service is not used, the IRPAgent shall provide First-in, First-out notification ordering, not provide message priority and not provide the support of Start Time and Stop Time.

Annex A (normative): IDL specifications

A.1 IDL specification (file name "ManagedGenericIRPConstDefs.idl")

```
//File: ManagedGenericIRPConstDefs.idl
#ifndef _MANAGED_GENERIC_IRP_CONST_DEFS_IDL_
#define _MANAGED_GENERIC_IRP_CONST_DEFS_IDL_
#include <TimeBase.idl>
// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
/* ## Module: ManagedGenericIRPConstDefs
This module contains definitions commonly used among all IRPs such as Alarm IRP.
______
module ManagedGenericIRPConstDefs
  Definition imported from CosTime.
   The time refers to time in Greenwich Time Zone.
   It also consists of a time displacement factor in the form of minutes of
  displacement from the Greenwich Meridian.
   typedef TimeBase::UtcT IRPTime;
  enum Signal {OK, FAILURE, PARTIAL_FAILURE};
  The VersionNumber is a string that identifies the IRP specification name
  and its version number. See definition "IRP document version number
   string" or "IRPVersion".
  The VersionNumberSet is a sequence of such VersionNumber. It is returned
  by get_XXX_IRP_versions(). The sequence order has no significance.
   typedef string VersionNumber;
   typedef sequence <VersionNumber> VersionNumberSet;
   typedef string MethodName;
   typedef string ParameterName;
   typedef sequence <ParameterName> ParameterList;
  The Method defines the structure to be returned as part of
   get_supported_operations_profile(). The name shall be the actual method
   name (ex. "attach_push", "change_subscription_filter", etc.)
   The parameter_list contains a list of strings. Each string shall be
   the actual parameter name (ex. "manager_reference", "filter", etc.)
  struct Method
   {
     MethodName name;
     ParameterList parameter_list;
  List of all methods and their associated parameters.
   typedef sequence <Method> MethodList;
  StringOpt is a type carrying an optional parameter.
   If the boolean is TRUE, then the value is present.
   Otherwise the value is absent.
  union StringOpt switch (boolean)
```

```
case TRUE: string value;
   };
   ShortOpt is a type carrying an optional parameter.
   If the boolean is \ensuremath{\mathsf{TRUE}}, then the value is present.
   Otherwise the value is absent.
   union ShortOpt switch (boolean)
      case TRUE: short value;
   };
   {\tt UnsignedShortOpt\ is\ a\ type\ carrying\ an\ optional\ parameter.}
   If the boolean is TRUE, then the value is present.
   Otherwise the value is absent.
   union UnsignedShortOpt switch (boolean)
      case TRUE: unsigned short value;
  LongOpt is a type carrying an optional parameter.
   If the boolean is TRUE, then the value is present.
   Otherwise the value is absent.
   union LongOpt switch (boolean)
   {
      case TRUE: long value;
   UnsignedLongOpt is a type carrying an optional parameter.
   If the boolean is TRUE, then the value is present.
   Otherwise the value is absent.
   union UnsignedLongOpt switch (boolean)
      case TRUE: unsigned long value;
};
#endif // _MANAGED_GENERIC_IRP_CONST_DEFS_IDL_

A.5 IDL specification (file name "NotificationIRPNotifications.idl")

```
//File: NotificationIRPNotifications.idl
#ifndef _NOTIFICATION_IRP_NOTIFICATIONS_IDL_
#define _NOTIFICATION_IRP_NOTIFICATIONS_IDL_
#include <CosNotification.idl>
#include <NotificationIRPConstDefs.idl>
// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
module NotificationIRPNotifications
   interface Notify
      Notification IRP IS defines 6 attributes for the notification header.
      They are: objectClass, objectInstance, notificationId, eventTime,
      systemDN and notificationType.
      The first 2 attributes are mapped into 1 name-value pair. The name of
      the mapped IDL construct is MANAGED_OBJECT_INSTANCE. The const
      string of this mapped IDL construct is defined here.
      The notificationId, eventTime and systemDN are respectively mapped
      into 3 name-value pairs. The const string(s) of these 3 mapped IDL
      constructs are defined here.
      The notificationType is not mapped into any name-value pair
      but is mapped into the type_name position-dependent
      field of the CORBA structured-event. There is no need for a const string
      definition for it.
      const string MANAGED_OBJECT_INSTANCE =
         NotificationIRPConstDefs::AttributeNameValue::MANAGED_OBJECT_INSTANCE;
```

```
const string NOTIFICATION_ID =
    NotificationIRPConstDefs::AttributeNameValue::NOTIFICATION_ID;

const string EVENT_TIME =
    NotificationIRPConstDefs::AttributeNameValue::EVENT_TIME;

const string SYSTEM_DN =
    NotificationIRPConstDefs::AttributeNameValue::SYSTEM_DN;
};

/**
Type to which OMG CosNotification::StructuredEvent remainder_of_body any is to be mapped */

struct NonFilterableEventBody {
    CosNotification::PropertySeq name_value_pairs;
    any remainder_of_non_filterable_body;
};

#endif // _NOTIFICATION_IRP_NOTIFICATIONS_IDL_
```

Annex B (informative): Change history

	Change history							
Date	TSG#	TSG Doc.	CR	Rev	Subject/Comment	Cat	Old	New
Jun 2001	S_12	SP-010283			Approved at TSG SA #12 and placed under Change Control		2.0.0	4.0.0
Sep 2001	S_13	SP-010522	0001		Eliminate guesses on IDL file names in Notification IRP: CORBA SS	F	4.0.0	4.1.0
Mar 2002	S_15	SP-020038	0002		Addition of missing generic CORBA exception "ValueNotSupported" into CORBA module "ManagedGenericIRPSystem"	F	4.1.0	4.2.0
Mar 2002	S_15				Automatic upgrade to Rel-5 (no Rel-5 CR)		4.2.0	5.0.0
Sep 2002	S_17	SP-020482	0004		Corrections to CORBA IDL specification "NotificationIRPSystem"	Α	5.0.0	5.1.0
Sep 2002	S_17	SP-020479	0005		Add optional parameters in CORBA Solution Set	F		5.1.0
Sep 2002					Corrected history box CR# & TS version#		5.1.0	5.1.1
Dec 2002					Cosmetics		5.1.1	5.1.2
Mar 2003	S_19	SP-030137	8000		Remove unused suspend_subscription and resume_subscription methods	Α	5.1.2	5.2.0
Mar 2003	S_19	SP-030137	0009		Corrections of CORBA IDL syntax errors	F	5.1.2	5.2.0
Mar 2003	S_19	SP-030064	0010		Update the usage IRP_VERSION in line with adopted release 5 policy - alignment with 32.111-3	F	5.1.2	5.2.0
Mar 2004	S_23	SP-040105			Automatic upgrade to Rel-6 (no CR)		5.2.0	6.0.0
Sep 2004	S_25	SP-040562	0012		Update 32.303 using IDL Style Guide	F	6.0.0	6.1.0
Dec 2004	S_26	SP-040793	0013		Remove filter requirement in IDL comments in the Notification IRP CORBA SS	F	6.1.0	6.2.0
Mar 2005	S_27	SP-050035	0014		Generic System Context, update of reference to IS specification	F	6.2.0	6.3.0
Jun 2005	S_28	SP-050286	0015		Add missing type for support of Structured Event non-filterable Name- Value pairs	F	6.3.0	6.4.0
Sep 2005	SA_29	SP-050461	0016		Align the CORBA SS IDL with TS 32.150 Style Guide	F	6.4.0	6.5.0
