Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under http://webapp.etsi.org/key/queryform.asp.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects; Telecommunication management, as identified below:

32.411:	"Performance Management (PM) Integration Reference Point (IRP): Requirements"
32.412:	"Performance Management (PM) Integration Reference Point (IRP): Information Service (IS)"
32.413:	"Performance Management (PM) Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set (SS)"
32.415	"Performance Management (PM) Integration Reference Point (IRP): eXtensible Markup Language (XML) definitions"

The present document is part of a set of TSs which describes the requirements and information model necessary for the Telecommunication Management (TM) of 3G systems. The TM principles and TM architecture are specified in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2].

A 3G system is composed of a multitude of Network Elements (NE) of various types and, typically, different vendors, which inter-operate in a co-ordinated manner in order to satisfy the network users' communication requirements. Any evaluation of PLMN-system behaviour will require performance data collected and recorded by its NEs according to a schedule established by the EM.

This aspect of the management environment is termed Performance Management. The purpose of any Performance Management activity is to collect performance related data, which can be used to locate potential problems in the network.

1 Scope

The present document specifies the Information Service for the Performance Management Integration Reference Point (PM IRP) as it applies to the Itf-N.

This IRP IS defines the semantics of operations (and their parameters) visible across the Itf-N in a protocol and technology neutral way. It does not define the syntax or encoding of the operations and their parameters.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions defined in 3GPP TS 32.411 [8] and 3GPP TS 32.401 [7] apply.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM Configuration Management

CORBA Common Object Request Broker Architecture

Performance Management

EM Element Manager
IOC Information Object Class
IRP Integration Reference Point

NE Network Element NM Network Manager NRM Network Resource Model

PM

PMIRP Performance Management Integration Reference Point

UML Unified Modelling Language

4 System Overview

4.1 System Context

The general definition of the System Context for the present IRP is found in 3GPP TS 32.150 [15] subclause 4.7.

In addition, the set of related IRP(s) relevant to the present IRP is shown in the two diagrams below.

Figure 4.1: System Context A

Figure 4.2: System Context B

4.2 Compliance rules

For general definitions of compliance rules related to qualifiers (Mandatory/Optional/Conditional) for *operations*, *notifications and parameters* (of operations and notifications) please refer to 3GPP TS 32.102 [2].

5 Void

6 Information Object Classes (IOCs)

6.1 Information entities imported and local labels

Label reference	Local label

3GPP TS 32.312 [5], information object class, ManagedGenericIRP	ManagedGenericIRP
3GPP TS 32.602 [9], information object class, ManagedEntity	ManagedEntity
3GPP TS 32.302 [12], information object class, NotificationIRP	NotificationIRP
3GPP TS 32.111-2 [4], information object class, AlarmIRP	AlarmIRP
3GPP TS 32.342 [10], information object class, FileTransferIRP	FileTransferIRP

6.2 Class diagram

6.2.1 Attributes and relationships

This clause introduces the set of Information Object Classes (IOCs) that encapsulate information within the IRPAgent. The intent is to identify the information required for the PMIRP Agent implementation of its operations and notification emission. This clause provides the overview of all support object classes in UML. Subsequent clauses provide more detailed specification of various aspects of these support object classes.

Figure 6.2.1(a): Information Object Class UML Diagram - Measurement

Figure 6.2.1(b): Information Object Class UML Diagram - Thresholding

Figure 6.2.1(c): Information Object Class UML Diagram - Combined

6.2.2 Inheritance

Figure 6.2.2: Information Object Class Inheritance UML Diagram

6.3 Information Object Class (IOCs) definitions

6.3.1 MeasurementJob

6.3.1.1 Definition

It represents a task that monitors and collects the performance measurement data, i.e. values of multiple measurementTypes of multiple ManagedEntity instances, at regular time intervals defined in JobMeasurementSchedule.

The target measurementTypes are those measurementTypes, whose names are in the related MeasuredAttribute. measurementTypeName, of the related ManagedEntity instances. The attributes of MeasurementJob, JobMeasurementSchedule and MeasuredAttribute can not be modified (except jobStatus) once a measurement job is created.

The MeasurementJob shall use its information and the information of the related JobMeasurementSchedule and the information of MeasuredAttribute(s) to perform measurement data collection during the MeasurementJob life-time. At the time of data collection, if MeasurementJob suspects the validity of the collected monitored values, the MeasurementJob should convey the fact to the IRPManager using the suspectFlag (3GPP TS 32.401 [7]) of the Report. The MeasurementJob will not emit any notification about this fact. Furthermore, the MeasurementJob shall continue to monitor the same target measurementTypes. Even in the worst possible case when the MeasurementJob cannot collect a single value from the target measurementTypes, the MeasurementJob must continue its activities according to the schedule created at MeasurementJob creation time.

The PMIRP Agent may decide to stop a MeasurementJob because of a PMIRP Agent internal problem or other problems such as in the case when the related managed resource is not accessible (e.g. uninstalled) or there exist a prolonged communication link problem between the PMIRP Agent and the related managed resource. In such case, the PMIRP Agent can stop the MeasurementJob resulting in the MeasurementJob.jobStatus == "Stopped". Additionally, "notifyMeasurementJobStatusChanged" notification shall be emitted to notify all subscribed IRPManagers about the stopping of a MeasurementJob.

The PMIRP Agent may also selectively suspend one or more MeasurementJobs without any operator"s action in case of overload. In such case, the PMIRP Agent suspends all the chosen MeasurementJob(s) resulting in the MeasurementJob.jobStatus == 'Suspended' and emit 'notifyMeasurementJobStatusChanged' notification for each MeasurementJob to notify all subscribed IRPManager(s) about the suspension. The behaviour on threshold monitors of PMIRP Agent after suspending is the same as the one after calling suspendMeasurementJob.

Then it should be possible, at any time, for the operator to resume a MeasurementJob suspended by the system. PMIRP agent may also resume the measurementJob by itself after detecting the end of the overload. When PMIRP Agent does not support the resumeMeasurementJob operation, PMIRP Agent shall resume the measurementJob automatically after detecting the end of overload. The behaviour of PMIRP Agent after resuming the measurementJob is the same as the one after calling resumeMeasurementJob. PMIRPAgent may suspend the corresponding measurementJob(s) when it can decide which one/ones cause(s) the overload; otherwise, PMIRP Agent can take jobPriority as a reference. The criterion for suspending one or another measurementJob of equal job priority is vendor specific.

The way to detect the beginning and the end of overload is out of the scope of the present document.

6.3.1.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
jobId	+	M	M	-
jobGranularityPeriod	+	M	M	-
jobReportingPeriod	+	M	M	-
jobStatus	+	M	M	-
jobPriority	+	0	M	-

6.3.1.3 State diagram

Figure 6.3.1.3.1: State Diagram for MeasurementJob

Figure 6.3.1.3.2: SubState Diagram of Active

The detailed description and state transition scenarios for MeasurementJob are in annex A.

6.3.2 JobMeasurementSchedule

6.3.2.1 Definition

JobMeasurementSchedule is the representation of the time intervals when the measurement job monitors and collects the performance measurement data. The attributes of JobMeasurementSchedule can not be modified once a measurement job is created.

6.3.2.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
jobStartTime	+	M	M	-
jobStopTime	+	M	M	-
jobSchedule	+	M	M	-

6.3.3 PMIRP

6.3.3.1 Definition

PMIRP is the representation of the performance management capabilities specified by the present document. This IOC inherits from ManagedGenericIRP IOC specified in 3GPP TS 32.312 [5].

6.3.3.2 Attribute

There is no additional attribute defined for this IOC besides those inherited.

6.3.3.3 Notification

Name	Qualifier	Notes			
notifyMeasurementJobStatusChanged	M	See clause 7.6.1.			
notifyThresholdMonitorObjectCreation	M (see note)	See clause 7.7.1.			
notifyThresholdMonitorObjectDeletion	M (see note)	See clause 7.7.2.			
notifyThresholdMonitorStatusChanged	O (see note)	See clause 7.7.3.			
NOTE: This notification is defined within the PMIRPNotification_2 Interface (see clause 7.7) which is qualified as optional. If the Interface is supported, then the qualifier defined here is relevant. Otherwise, the qualifier is irrelevant.					

6.3.4 MeasurementJobList

6.3.4.1 Definition

MeasurementJobList is the representation of the list of MeasurementJobs.

6.3.4.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
jobListId	+	M	M	-

6.3.5 MeasuredAttribute

6.3.5.1 Definition

It represents the name of the measurementType of the related ManagedEntity instance whose value is to be monitored and collected. The name of the monitored and collected measurementType is captured by measurementTypeName.

6.3.5.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
measurementTypeName	+	M	M	-

6.3.6 MeasurementReader

6.3.6.1 Definition

It represents the capability to read the value of the measurementType of the related ManagedEntity instance. The value of the monitored and collected measurementType is captured by measurementResultValue.

6.3.6.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
measurementResultValue	+	M	M	-
probableCause	+	M	M	-
specificProblem	+	M	M	-
direction	+	M	M	-

6.3.7 ManagedEntity

6.3.7.1 Definition

The IOC ManagedEntity represents an IOC defined in Network Resources Models, e.g. Generic Network Resource Model, Core Network Resource Model, UTRAN Network Resource Model or GERAN Network Resource Model. It also can represent VSE subclass of 3GPP defined NRM IOCs or VSE defined NRM IOCs. Besides, it can also represent a 'private Object Class' as defined in TS 32.404, e.g. RA. ManagedEntity is used in the specification of PMIRP operations to represent an IOC defined in these Network Resource Models and private Object Classes.

6.3.8 Monitor

6.3.8.1 Definition

It represents a capability to determine the (a) threshold-crossing or (b) threshold-reaching and the threshold-clearing. This class is abstract in that it cannot be instantiated. The ThresholdMonitor inherits this class.

It is the IRPAgent"s choice to support (a) or (b) (but not both). The support is on an IRPAgent system wide basis and is not on a per threshold basis. The IRPAgent"s behaviour regarding which approach (i.e., (a) or (b) above) to use, shall be the same for emitting alarms and for clearing alarms.

The instances of a class derived from this abstract class shall emit notifyThresholdMonitorObjectCreation when they are first created; and shall emit a notifyThresholdMonitorObjectDeletion when deleted.

The instances of a class derived from this abstract class shall also emit notifyNewAlarm, notifyChangedAlarm and notifyClearedAlarm according to the rules specified in Annex B: Threshold Alarm Triggering Events.

The objectClass and objectInstance parameter of these notifications carry the class and DN of the ManagedEntity whose measurementType is being monitored and whose threshold condition has been triggered. The eventType of these notifications carry "Quality of Service Alarm". See 3GPP TS 32.111-2 [4].

6.3.8.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
monitorId	+	M	M	-
monitorGranularityPeriod	+	M	M	-

6.3.8.3 Notification

Notification name	Note
notifyThresholdMonitorCreation	See clause 7.1 (class diagram).
notifyThresholdMonitorDeletion	See clause 7.1 (class diagram).

6.3.9 ThresholdMonitorList

6.3.9.1 Definition

 ${\tt Threshold} {\tt MonitorList} \ is \ the \ representation \ of \ the \ list \ of \ Threshold {\tt Monitors}.$

6.3.9.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
monitorListId	+	M	M	-

6.3.10 ThresholdMonitor

6.3.10.1 Definition

In order to monitor the overall health of the network, the thresholds are set by the authorized users to generate network performance related alarms. The ThresholdMonitor contains the values of the threshold settings for the PM parameters. If the threshold is (a) crossed or (b) reached (see 6.3.8.1 for clarification of the alternatives (a) and (b)), a performance alarm will be emitted (see 3GPP TS 32.401 [7]). The name of the monitored measurementType is captured by MeasuredAttribute.measurementTypeName and the value of it is captured by MeasurementReader.measurementResultValue.

6.3.10.2 Attribute

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
thresholdMonitorStatus	+	M	M	-

6.3.11 ThresholdLevel

6.3.11.1 Definition

It defines the thresholding criteria (via ThresholdLevel.thresholdValue and ThresholdLevel.hysteresis) for a measurementType. It also specifies the thresholdSeverity level (via ThresholdLevel.thresholdSeverity) carried in the alarm triggered by the (a) threshold crossing or (b) threshold reaching event. (See 6.3.8.1 for clarification of the alternatives (a) and (b)).

6.3.11.2 Attribute

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
thresholdValue	+	M	M	-
thresholdSeverity	+	M	M	-
hysteresis	+	M	M	-

6.4 Information relationship definitions

6.4.1 relation-pmIRP-measurementJobList (M)

6.4.1.1 Definition

This represents the relationship between PMIRP and MeasurementJobList.

6.4.1.2 Role

Name	Definition
theMeasurementJobList	It represents the MeasurementJobList.
thePMIRP	It represents the PMIRP.

6.4.1.3 Constraint

Name	Definition
uniqueJobListId	The jobListIds playing the role of theMeasurementJobList, are unique within a particular PMIRP.

6.4.2 relation-measurementJobList-measurementJob (M)

6.4.2.1 Definition

This represents the relationship between MeasurementJobList and MeasurementJob.

6.4.2.2 Role

Name	Definition
theMeasurementJob	It represents the MeasurementJob.
theMeasurementJobList	It represents the MeasurementJobList.

6.4.2.3 Constraint

Name	Definition
uniqueJobId	The joblds of all MeasurementJobs, playing the role of theMeasurementJob, are unique within a
	particular PMIRP and MeasurementJobList.

6.4.3 relation-measurementJob-jobMeasurementSchedule (M)

6.4.3.1 Definition

 $This \ represents \ the \ relationship \ between \ \texttt{MeasurementJob} \ and \ \texttt{JobMeasurementSchedule}.$

6.4.3.2 Role

Name	Definition	
theJobSchedule	It represents the JobMeasurementSchedule.	
theMeasurementJob	It represents the MeasurementJob.	

6.4.4 relation-measurementJob-measurement (M)

6.4.4.1 Definition

This represents the relationship between MeasurementJob and MeasurementReader.

6.4.4.2 Role

Name	Definition
theMeasurement	It represents the MeasurementReader.
theMeasurementJob	It represents the MeasurementJob.

6.4.5 relation-measuredAttribute-managedEntity (M)

6.4.5.1 Definition

 $This \ represents \ the \ relationship \ between \ {\tt MeasuredAttribute} \ and \ {\tt ManagedEntity}.$

6.4.5.2 Role

Name	Definition
theMeasuredAttribute	The MeasuredAttribute, when playing this role, reads the monitored measurement
	types of the related ManagedEntity instances. The names of measurement types are
	captured by the MeasuredAttribute.MeasurementTypeName.When playing this
	role, the MeasuredAttribute is aware of the class name and DN of the
	ManagedEntity.
theME	The ManagedEntity, when playing this role, represents the actual network resource
	instance under measurement or whose measurementTypes are being monitored for (a)
	threshold-crossing or (b) threshold-reaching and threshold-clearing. (See 6.3.8.1 for
	clarification of the alternatives (a) and (b))

6.4.5.3 Constraint

Name	Definition
applyToSameObjectClass The MeasuredAttribute, which playing the role of "theMeasuredAttribute", can	
	monitor the thresholds of the measurementTypes of one or multiple managed object
	instances of the same managed object class, which playing the role of "theME".

6.4.6 relation-pmIRP-thresholdMonitorList (M)

6.4.6.1 Definition

This represents the relationship between PMIRP and ThresholdMonitorList.

6.4.6.2 Role

Name	Definition
theThresholdMonitorList	It represents the ThresholdMonitorList.
thePMIRP	It represents the PMIRP.

6.4.6.3 Constraint

Name	Definition	
uniqueMonitorListId	d The monitorListIds playing the role of theThresholdMonitorList, are unique within a particul	
	PMIRP.	

6.4.7 relation-thresholdMonitorList-thresholdMonitor (M)

6.4.7.1 Definition

 $This \ represents \ the \ relationship \ between \ Threshold \texttt{MonitorList} \ and \ Threshold \texttt{Monitor}.$

6.4.7.2 Role

Name	Definition
theThresholdMonitor	It represents the ThresholdMonitor.
theThresholdMonitorList	It represents the ThresholdMonitorList.

6.4.7.3 Constraint

Name	Definition	
uniqueMonitorId	The monitorIds of all ThresholdMonitors, playing the role of theThresholdMonitor, are unique	
	within a particular ThresholdMonitorList.	

6.4.8 relation-thresholdMonitor-measurement (M)

6.4.8.1 Definition

 $This \ represents \ the \ relationship \ between \ Threshold \texttt{Monitor} \ and \ \texttt{MeasurementReader}.$

6.4.8.2 Role

Name	Definition
theMeasurement	It represents the MeasurementReader.
theThresholdMonitor	It represents the ThresholdMonitor.

6.4.9 relation-measuredAttribute-thresholdLevels (M)

6.4.9.1 Definition

This represents the relationship between MeasuredAttribute and ThresholdLevel.

6.4.9.2 Role

Name	Definition
theMeasuredAttribute	The MeasuredAttribute, when playing this role, can have 14 ThresholdLevel
	associates with it to set the (a) threshold-crossing or (b) threshold reaching and the clearing
	criteria (i.e. ThresholdLevel.thresholdValue, ThresholdLevel.hysteresis) and
	associated thresholdSeverity (i.e. ThresholdLevel.thresholdSeverity) of the
	monitored measurementType. (see 6.3.8.1 for clarification of the alternatives (a) and (b))
theThresholdLevel	When playing this role, the ThresholdLevel captures the (a) threshold-crossing or (b)
	threshold-reaching and the threshold-clearing criteria and its associated thresholdSeverity
	level. (see 6.3.8.1 for clarification of the alternatives (a) and (b))

6.4.9.3 Constraint

Name	Definition
noMoreThanFourLevels	A MeasuredAttribute may have no more than four ThresholdLevels associated with
	it.

6.5 Information attribute definition

6.5.1 Definition and legal values

Attribute Name	Definition	Legal Values
directio n	For some measurementType, the higher its thresholdValue, the higher is the thresholdSeverity. For others, the lower its thresholdValue, the higher is its thresholdSeverity. This attribute identifies if the measurementType is of the former (i.e. "Increasing") or latter type (i.e. "Decreasing"). If it is "Increasing", the threshold event is triggered when the value first equals or exceeds (when compared against the last read value) a threshold value. The threshold is said to be cleared when the measurementType value falls below (when compared against the last read value) one or more threshold values. If it is "Decreasing", the threshold event is triggered when the measurementType value first equals or falls below one or more threshold values. The threshold is said to be cleared when the measurementType value rises above the threshold value.	Possible values are: "Increasing", "Decreasing"
hysteres	See annex B (Threshold Related Performance Alarm Triggering Events) for details of the behaviour of multiple thresholds. A threshold has a value. It can have a hysteresis. A threshold with a hysteresis has a threshold-high and a threshold-low value that are different from the threshold value. A hysteresis, therefore, defines the threshold-high and threshold-low levels within which the measurementType value is allowed to oscillate without triggering a (a) threshold-crossing or (b) threshold-reaching or a threshold-clearing condition. (See 6.3.8.1 for clarification of the alternatives (a) and (b)) threshold-high = threshold + hysteresis threshold-low = threshold Related Performance Alarm Triggering Events).	
	It specifies the period between two successive measurements.	The value can be 5 minutes, 15 minutes, 30 minutes, 1 hours, 12 hours and 24 hours. The minimum granularity period is 5 minutes in most cases, but for some measurements it may only make sense to collect data in a larger granularity period.
jobId	It identifies the MeasurementJob instance (and distinguishes it from all other existing and stopped MeasurementJob instances of the PMIRP Agent).	Any identifier except: 1. Those that identify MeasurementJob instances whose MeasurementJob.jobStatus(s) are Scheduled, Active, Suspended or Stopped; and 2. Those that appear in filenames of files ready for IRPManager retrieval.
d	of the PMIRP Agent. It specifies the period between two successive	Any identifier. Its value should be one or multiple of jobGranularityPeriod.

Its appeals the detailed time frames during which the Measurement.Tob. jobStatus = Active and its substate = Busy. Its appeals the Measurement.Tob. jobStatus = Active and its substate = Busy. 	clarification of the alternatives (a) and (b))	If the monitored measurementType is of Gauge type, this thresholdValue shall be of the same type. If the monitored measurementType is of counter type, then this value should be expressed as a rate, i.e., the number of units of type of the monitored measurementType over unit of time. Note this rate is independent from the monitorGranularityPeriod. This means that changes in the monitorGranularityPeriod should not impact the rate used for threshold monitoring.

6.5.2 Constraints

then the first report time shall be immediately after the completion of the n-th successful measurementType reading. The measurementType reading times are determined by the following rules. be as soon as possible on the hour and subsequent reads		
shall be at 12 hours interval.		
- If jobGranularityPeriod is 24 hours, then the first read shall		
be as soon as possible on the hour and subsequent reads		be as soon as possible on the hour and subsequent reads
shall be at 24 hours interval.		
multiLevelSeverity HysteresisOverlap For each ThresholdLevel.thresholdSeverity, there	nultiLevelSeverity HysteresisOverlap	
may be a ThresholdLevel.hysteresis value		
corresponding to it. These multi-level values of		
ThresholdLevel.hysteresis, relating to one		
ThresholdMonitor, shall not overlap.		·
multiLevelSeverityOrder The multiple ThresholdLevel(s), related to one	MultiLevelSeverityOrder	
ThresholdMonitor, shall be of the following order. If		
ThresholdLevel.thresholdSeverity of one instance is		
higher than that of the other instance and the direction is		
		'Increasing', then the ThresholdLevel.thresholdValue is
higher than that of the other. If ThresholdLevel.thresholdSeverity of one instance is		
higher than that of the other instance and the direction is		
'Decreasing', then the ThresholdLevel.thresholdValue		
is lower than that of the other.		
numberOfThresholdLevelPerThresholdMonitor In relation-tMonitor-tLevel, the multiplicity of	numberOfThresholdLevelPerThresholdMonitor	
the Threshold Level is "14".		
If PMIRP supports multi-level thresholdSeverity, then there are		
at most 4 ThresholdLevels relating to one		· ·
ThresholdMonitor. All		
ThresholdLevel.thresholdSeverity instances shall		
		hold a different value that is chosen from the following: 'Critical',
If PMIRP does not support multi-level thresholdSeverity, then		
there is only one ThresholdLevel relating to one		
ThresholdMonitor. The sole		·
ThresholdLevel.thresholdSeverity shall hold one of		
the following: 'Critical', 'Major', "Warning' or 'Minor'.		

7 Interface definition

7.1 Class diagram

NOTE 1: PMIRPNotifications_2 is mandatory if PMIRPOperations_2 is supported.

NOTE 2: The suspendMeasurementJob and resumeMeasurementJob operations are optional.

Figure 7.1: Class Diagram

7.2 Generic rules

- **Rule 1:** each operation with at least one input parameter supports a pre-condition valid_input_parameter which indicates that all input parameters shall be valid with regards to their information type. Additionally, each such operation supports an exception operation_failed_invalid_input_parameter which is raised when pre-condition valid_input_parameter is false. The exception has the same entry and exit state.
- **Rule 2:** each operation with at least one optional input parameter supports a set of pre-conditions supported_optional_input_parameter_xxx where "xxx" is the name of the optional input parameter and the pre-condition indicates that the operation supports the named optional input parameter. Additionally, each such operation supports an exception operation_failed_unsupported_optional_input_parameter_xxx which is raised when (a) the pre-condition supported_optional_input_parameter_xxx is false and (b) the named optional input parameter is carrying information. The exception has the same entry and exit state.
- **Rule 3:** each operation shall support a generic exception operation_failed_internal_problem which is raised when an internal problem occurs and that the operation cannot be completed. The exception has the same entry and exit state.

NOTE: These rules are mapped at the solution set level. Pre-conditions and exceptions, generated by these rules, need not appear explicitly in the present document.

7.3 PMIRPOperations_1 Interface (M)

7.3.1 Operation createMeasurementJob (M)

7.3.1.1 Definition

This operation supports IRPManager's request to create a MeasurementJob through Itf-N.

Once created, the attributes of MeasurementJob (except MeasurementJob.jobStatus) and the related JobMeasurementSchedule and MeasuredAttribute will not be modified during the life-time of the MeasurementJob.

One MeasurementJob can collect the value of one or multiple measurementTypes.

When a measurementType is collected by one MeasurementJob for a given instance, another MeasurementJob which wants to collect the same measurementType for the same instance with different or the same jobGranularityPeriod may be rejected. This behaviour shall be consistent for a given implementation by a specific vendor.

7.3.1.2 Input parameters

Parameter Name	Qualif ier	Information type	Comment
iOCName		ManagedEntity.o	It specifies one Managed Entity class name. IRPManager requests
		bjectClass	that one or more measurementType(s) of the instances of this class to be monitored.
iOCInstanceList	М	List of	It specifies the list of DNs of ManagedEntity instances whose
		<managedentity.< td=""><td>measurementType(s) are to be collected.</td></managedentity.<>	measurementType(s) are to be collected.
		objectInstance>	
			ManagedEntity instance(s) can be added in the network regardless
			of whether a MeasurementJob exists or not.
			An empty list means that all instances known by PMIRP shall be
			monitored.
			The support of the use of empty list to indicate all instances is optional.
			If the MeasurementJob is created using empty list, there are two possible implementations:
			PMIRP shall monitor all instances known by PMIRP at the time of
			MeasurementJob creation, and it will not monitor instances added
			later.
			2) PMIRP shall monitor all instances known by PMIRP at the time of
			MeasurementJob creation, and it shall monitor instances added
			later.
measurementCate			MeasuredAttribute. MeasurementTypeName specifies the
goryList			corresponding name of measurementType to be measured.
		te. measurementType	The element of management Catagonyl ist could be one of the
		Name>	The element of measurementCategoryList could be one of the following:
			- The form "family.measurementName.subcounter" can be used in
			order to retrieve a specified subcounter of a MeasurementType.
			- The form "family.measurementName" can be used in order to
			retrieve a specific MeasurementType. In case the MeasurementType
			includes subcounters, all subcounters will be retrieved.
			- The form "family" can be used in order to retrieve all
			MeasurementTypes in this family.
			At least, one element of measurementCategoryList shall be specified.
granularityPeri	M	MeasurementJob.	See clause 6.5.1 (definition and legal values).
od		jobGranularityP eriod	
reportingPeriod	М		See clause 6.5.1 (definition and legal values).
			PMIRP will periodically monitor the performance data according to the
		iod	"reportingPeriod" parameter and produces an aggregated report in
			one or more files. These files shall be transferred through file transfer
			mechanism covered by the File Transfer IRP IS (see TS 32.342 [10]).
startTime	0		See clause 6.5.1 (definition and legal values).
		tTime	Default value is "start now". If startTime is in the past, the current time will be used and the job will start immediately.
stopTime	0		See clause 6.5.1 (definition and legal values).
	_		Default value for jobStopTime is to run indefinitely. StopTime shall be
		Time	later than startTime and current time.
schedule	0		See clause 6.5.1 (definition and legal values).
			Default value is "daily".
nni oni tr		dule	Con playing 6.5.4 (definition and logal values)
priority	0		See clause 6.5.1 (definition and legal values). Default value is 'Medium'
		on.loneriotich	שום אווים אוויים

7.3.1.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
jobId	M	MeasurementJob.jobId	Unique identifier of the MeasurementJob from all the existing and stopped MeasurementJobs in a PMIRP Agent.
unsupportedList	M	<pre>List of < ManagedEntity.objectInstance, MeasuredAttribute. measurementTypeName, reason ></pre>	To create a MeasurementJob, best-effort is required. The parameter of 'unsupportedList' must be returned if status = PartialSuccess. The reason can be any of: measurementTypeName is unknown to the PMIRP. measurementTypeName is invalid. measurementTypeName is not supported in the specific implementation. The related IOC Instance is unknown (e.g. it does not exist at the time of this operation invocation) to the PMIRP. Insufficient capacity to monitor the related IOC Instance(s). measurementTypeName is already monitored for the IOC instance with the same or another granularity period. When the input parameter iOCInstanceList is empty, the unsupportedList shall be empty.
status	М	ENUM (Success, Failure, PartialSuccess)	An operation may fail because of a specified or unspecified reason.

7.3.1.4 Pre-condition

 ${\tt atLeastOneValidMeasurementType\ AND\ validStartTime\ AND\ validStopTime\ AND\ validSchedule\ AND\ validGranularityPeriod\ AND\ validReportingPeriod\ AND\ sufficientCapacity\ AND\ validPriority.}$

Assertion Name	Definition
atLeastOneValidMeasurementType	At least one input measurementType is valid. The word valid means that the
	PMIRP is aware of this measurementType name, is aware of the
	ManagedEntity holding such measurementType and that the
	MeasurementJob created can monitor its value according to the monitoring
	criteria, e.g. granularity period, given in the input parameter.
validStartTime	The startTime is valid.
validStopTime	The stopTime is valid.
validSchedule	The schedule is valid.
validGranularityPeriod	The granularityPeriod is valid.
validReportingPeriod	The reportingPeriod is valid.
sufficentCapacity	The resource of EM and NE can support the requested measurement.
validPriority	The priority is valid.

7.3.1.5 Post-condition

 $\verb|someMeasurementTypeNamesMonitored| AND \\ \verb|notifyMeasurementJobStatusChangedMayBeEmitted|.$

Assertion Name	Definition
someMeasurementTypeNamesMonitored	At least one input measurementTypeName is monitored
	by the newly created MeasurementJob.
notifyMeasurementJobStatusChangedMayBeEmitted	If start time is "start now", the
	MeasurementJob.jobStatus turns "Active" and a
	notifyMeasurementJobStatusChanged is emitted.

7.3.1.6 Exceptions

Exception Name	Definition
invalidStartTime	Condition: validStartTime is false.
	Returned Information: Name of the exception; status is set to 'Failure'.
	Exit state: Entry state.
invalidStopTime	Condition: validStopTime is false.
	Returned Information: Name of the exception; status is set to 'Failure'.
	Exit state: Entry state.
invalidSchedule	Condition: validSchedule is false.
	Returned Information: Name of the exception; status is set to 'Failure'.
	Exit state: Entry state.
invalidGranularityPeriod	Condition: validGranularityPeriod is false.
	Returned Information: Name of the exception; status is set to 'Failure'.
	Exit state: Entry state.
invalidReportingPeriod	Condition: validReportingPeriod is false.
	Returned Information: Name of the exception; status is set to 'Failure'.
	Exit state: Entry state.
highWorkLoad	Condition: sufficientCapacity is false.
	Returned Information: Name of the exception and the detailed reason which is one
	of: emCpuBusy; emHDShortage, emLowMemory, {neCpuBusy, neObjectInstList},
	{neHDShortage neObjectInstList}, {neLowMemory, neObjectInstList}, maxJobReached,
	otherReason; status is set to 'Failure'.
	Exit state: Entry state.
invalidPriority	Condition: validPriority is false.
	Returned Information: Name of the exception; status is set to "Failure".
	Exit state: Entry state.

7.3.2 Operation stopMeasurementJob (M)

7.3.2.1 Definition

This operation supports IRPManager's request to stop a MeasurementJob through Itf-N, after which, the MeasurementJob may still be visible via Itf-N. Whether the MeasurementJob is removed from the managed system is vendor specific and out of scope of the present document.

The behaviour of the IRPAgent when the job is stopped is vendor specific, which means the job could be stopped at the end of the GranularityPeriod or immediately.

After the job has been stopped, the notifyFileReady or notifyFilePreparationError notification shall be emitted immediately or when the next reporting period is reached.

7.3.2.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
JobId	M	MeasurementJob.jobId	It specifies the MeasurementJob to be stopped.

7.3.2.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
Status	M	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified reason.

7.3.2.4 Pre-condition

 ${\tt measurementJobExists}~AND~{\tt measurementJobCanBeStopped}.$

Assertion Name	Definition
measurementJobExists	MeasurementJob specified in the input parameter exists.
measurementJobCanBeStopped	MeasurementJob specified in the input parameter can be stopped now.

7.3.2.5 Post-condition

 ${\tt measurementJobIsStopped~AND~notifyMeasurementJobStatusChangedEmitted}.$

Assertion Name	Definition
measurementJobIsStopped.	The MeasurementJob identified by jobld is stopped but may
	still be visible via ltf-N. The Job state is "Stopped".
notifyMeasurementJobStatusChangedEmitted	The notifyMeasurementJobStatusChanged is emitted.

7.3.2.6 Exceptions

Exception Name	Definition	
	Condition: (MeasurementJobExists) not verified.	
	Returned information: output parameter status is set to 'Failure'.	
	Exit state: Entry State.	
jobCannotBeStopped	Condition: (measurementJobCanBeStopped) not verified.	
	Returned information: output parameter status is set to 'Failure'.	
	Exit state: Entry State.	

7.3.3 Operation suspendMeasurementJob (O)

7.3.3.1 Definition

This operation supports IRPManager's request to suspend a MeasurementJob through Itf-N. When the MeasurementJob is suspended, the collection of measurement result data by the MeasurementJob will stop, regardless of its schedule, but the MeasurementJob still exists. The suspend operation is necessary in following situation:

- High work load experienced by managed system.
- The specified measurement data is not needed in a specific duration.
- Other specific requirement.

After the job has been suspended, the notifyFileReady or notifyFilePreparationError notification shall be emitted immediately or when the next reporting period is reached.

7.3.3.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
jobId	M	MeasurementJob.jobId	It specifies the MeasurementJob to be suspended.

7.3.3.3 Output parameters

Parameter	Qualifier	Matching Information	Comment
Name			
status	M	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified reason.

7.3.3.4 Pre-condition

 ${\tt measurementJobExists}~AND~{\tt measurementJobIsNotSuspended}.$

Assertion Name	Definition
measurementJobExists	The MeasurementJob specified in the input parameter exists.
measurementJobIsNotSuspended	The MeasurementJob specified in the input parameter is not suspended.

7.3.3.5 Post-condition

 $\label{lem:measurementJobIsSuspended} \ AND\ notify Threshold Monitor Status Changed Emitted\ AND\ notify Measurement JobStatus Changed Emitted.$

Assertion Name	Definition
MeasurementJobIsSuspended	The MeasurementJob identified by measurementJobId is
	suspended. It means the following.
	(a) All files open for capturing measurement results are closed.
	(b) If one of the files closed contain measurement data, a notifyFileReady is emitted indicating the availability of the file(s).
	(c) No more reading of measurementType values.
	(d) The MeasurementJob.jobStatus is set to 'Suspended'.
	(e) For an IRPAgent using the measurement result data for threshold monitoring, the detection of the related performance alarm conditions is suspended.
notifyThresholdMonitorStatusChangedEmitted	The notifyThresholdMonitorStatusChanged is emitted, if the ThresholdMonitor behaviour is dependent on the availability of the measurement result.
notifyMeasurementJobStatusChangedEmitted	The notifyMeasurementJobStatusChanged is emitted.

7.3.3.6 Exceptions

Exception Name	Definition
unknownJob	Condition: (measurementJobExists) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
jobAlreadySuspended	Condition: (measurementJobIsNotSuspended) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.

7.3.4 Operation resumeMeasurementJob (O)

7.3.4.1 Definition

This operation supports IRPManager's request to resume a suspended MeasurementJob. When the MeasurementJob is resumed, it will work according to criteria (e.g. granularity period, startTime, stopTime, schedule) set up by the corresponding createMeasurementJob operation.

7.3.4.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
jobId	M	MeasurementJob.jobId	It specifies the MeasurementJob to be resumed.

7.3.4.3 Output parameters

Parameter	Qualifier	Matching Information	Comment
Name			
status	M	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified reason.

7.3.4.4 Pre-condition

measurementJobExists AND measurementJobIsSuspended AND sufficientCapacity.

Assertion Name	Definition		
measurementJobExists	MeasurementJob specified by the input parameter exists.		
measurementJobIsSuspended	MeasurementJob specified by the input parameter is suspended.		
sufficientCapacity	The resource of EM and NE can support the requested		
	measurement.		

7.3.4.5 Post-condition

 $\verb|measurementJobIsResumed| AND | \verb|notifyMeasurementJobStatusChangedEmitted|.$

Assertion Name	Definition
measurementJobIsResumed	The MeasurementJob identified by MeasurementJobId is
	resumed., It means the following. This resumed
	MeasurementJob shall behave as it did when it was first
	created by createMeasurementJob.
	Depending on the current time and the
	JobMeasurementSchedule.startTime, the
	MeasurementJob.jobStatus will be set accordingly.
notifyMeasurementJobStatusChangedEmitted	The notifyMeasurementJobStatusChanged is emitted.

7.3.4.6 Exceptions

Exception Name	Definition		
unknownJob	Condition: (measurementJobExists) not verified.		
	Returned information: output parameter status is set to 'Failure'.		
	Exit state: Entry State.		
jobIsNotSuspended	Condition: (measurementJobIsSuspended) not verified.		
	Returned information: output parameter status is set to 'Failure'.		
	Exit state: Entry State.		
highWorkLoad	Condition: sufficientCapacity is false.		
	Returned Information: Name of the exception and the detailed reason which is one of:		
	emCpuBusy; emHDShortage, emLowMemory, {neCpuBusy, neObjectInstList}, {neHDShortage		
	neObjectInstList}, {neLowMemory, neObjectInstList}, maxJobReached, otherReason; status is		
	set to 'Failure'.		
	Exit state: Entry state.		

7.3.5 Operation listMeasurementJobs (M)

7.3.5.1 Definition

This operation supports IRPManager's request to list the information of all or a set of specified current MeasurementJobs.

7.3.5.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
jobIdList	M	List of	This parameter specifies the criteria to list the MeasurementJobs.
			If the parameter specifies the list of jobld to be retrieved, then the corresponding information of jobs will be returned.
			If the parameter contains no information, all the MeasurementJobs are retrieved.

7.3.5.3 Output parameters

Parameter	Qualifier	Matching Information	Comment
Name			
jobInfoList	М	List of<	Returned information of corresponding MeasurementJobs
		attributes of	matching the input criteria. If no match, then the length of the
		MeasurementJob,	jobInfolist will be 0 (with status == Success).
		attributes of	
		JobMeasurementSchedule,	Jobs are created by successful invocation of
		(refer to definition and legal	createMeasurementJob (see 7.3.1.2).
		values in clause 6.5.1)	
		iOCName,	If the job is created using non-empty iOCInstanceList in
		iOCInstanceList,	createMeasurementJob, then iOCInstanceList here shall
		measurementCategoryList	contain the DNs of the supported IOC instances.
		(refer to input parameter of	
		createMeasurementJob in	If the job is created using empty iOCInstanceList, then
		clause 7.3.1.2)	iOCInstanceList here shall be empty as well. This case is
		>	valid only if IRPAgent support the use of empty list. (see clause
			7.3.1.2)
status	М	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified
			reason.

7.3.5.4 Pre-condition

jobIdListIsValid.

Assertion Name	Definition
jobIdListIsValid	jobIdList specified in the input parameter is valid.

7.3.5.5 Post-condition

 ${\tt measurementJobsAreReturned\ AND\ measurementJobNotAffected}.$

Assertion Name	Definition	
measurementJobsAreReturned	The information of required MeasurementJobs are returned in the output	
	parameters.	
measurementJobNotAffected	The current MeasurementJob(s) are not affected by the operation.	

7.3.5.6 Exceptions

Exception Name	Definition	
invalidJobIdList	Condition: (jobIdListIsValid) not verified.	
	Returned information: output parameter status is set to 'Failure'.	
	Exit state: Entry State.	

7.4 PMIRPOperations_2 Interface (O)

7.4.1 Operation createThresholdMonitor (M)

7.4.1.1 Definition

This operation supports IRPManager's request to create a ThresholdMonitor that defines the thresholds for some specific measurementTypes. If the threshold defined is (a) crossed or (b) reached, the related performance alarms will be emitted to subscribed IRPManager(s).

Two cases are allowed:

- One case only accepts threshold monitoring of measurementType(s) that are already under monitoring by an existing MeasurementJob. This kind of PMIRP will not monitor a measurementType for (a) threshold-crossing or (b) threshold reaching or for clearing if that measurementType is not already subject to a MeasurementJob monitoring. This kind of PMIRP will only determine the (a) threshold crossing or (b) threshold reaching and clearing events when the related MeasurementJob(s) are in Active states. The IRPManager, when interacting with this kind of PMIRP, must first start a MeasurementJob to monitor the measurementTypes and then invoke this operation for the same measurementTypes.
- The other case is that it can accept threshold monitoring of measurementType(s) regardless if they are already under monitoring by existing MeasurementJob(s). ThresholdMonitor is independent of any existing MeasurementJob(s) and no new MeasurementJob(s) are created for threshold monitoring purposes.

(See 6.3.8.1 for clarification of the alternatives (a) and (b))

7.4.1.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
iOCName	М	ManagedEntity.objectClass	It specifies the ManagedEntity class name of the instances specified by iOCInstanceList.
iOCInstanceList	М	List of <managedentity.objectinstance></managedentity.objectinstance>	It specifies the DNs of ManagedEntity instances whose measurementTypes are to be monitored. At least, one instance shall be specified.
thresholdInfoList	M	List of < MeasuredAttribute.measurementTypeName, Monitor.probableCause, Monitor.specificProblem, Monitor.direction, thresholdPack > where thresholdPack is list of thresholdPackElement. The thresholdPackElement is STRUCT < ThresholdLevel.thresholdValue, ThresholdLevel.thresholdSeverity, ThresholdLevel.hysteresis, >	It specifies the thresholds to specific
monitorGranularityPeriod	M	Monitor.monitorGranularityPeriod	See clause 6.5.1 (definition and legal values).

7.4.1.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
monitorId	М	ThresholdMonitor.monitorId.	It specifies the unique identifier of the
			ThresholdMonitor in the PMIRP Agent.
unsupportedList		<pre>List of < ManagedEntity.objectClass, ManagedEntity.objectInstance, MeasuredAttribute. measurementTypeName, reason ></pre>	To create a ThresholdMonitor, best-effort is required. This parameter identifies the unsupported but requested measurementType(s). The reason can be: (a) The PMIRP has trouble starting monitoring the threshold of this measurementType. (b) The measurementType is illegal. (c) The measurementType exists but it is not currently under monitoring by any
			MeasurementJob and that the PMIRP requires that it be under monitoring by MeasurementJob (before it can be monitored for thresholding). (d) Hysteresis is overlapped. This parameter is used only when the operation returns 'PartialSuccess'.
status	M	ENUM (Success,Failure, PartialSuccess)	An operation may fail because of a specified or unspecified reason.

7.4.1.4 Pre-condition

 $\verb|validGranular| ity Period AND some ValidMeasurement Type AND validDirection AND validNumber Of Threshold Pack Elements AND validOrder Of Threshold Pack Elements. \\$

Assertion Name	Definition
validGranularityPeriod	The monitorGranularityPeriod is valid.
someValidMeasurementType	At least one requested measurementType can be monitored for
	thresholding.
validDirection	The direction is valid.
validNumberOfThresholdPackElements	If PMIRP supports multi-level thresholdSeverity, it is valid if the number of
	elements in thresholdPack is 1, 2, 3 or 4.
	If PMIRP does not support multi-level thresholdSeverity, it is valid if the
	number is 1.
validOrderOfThresholdPackElements	This assertion is applicable if PMIRP supports multi-level
	thresholdSeverity. It is valid if it satisfies the constraint defined by
	multiLevelSeverityOrder of clause 6.5.2 (constrains).

7.4.1.5 Post-condition

 $threshold \verb|MonitorIsCreated|\ AND|\ notify \verb|ObjectCreationEmitted|.$

Assertion Name	Definition
	The ThresholdMonitor identified by monitorId exists. And the performance alarm shall be emitted if the thresholds are (a) crossed or (b) reached and the thresholdMonitorStatus is "Active". (See 6.3.8.1 for clarification of the alternatives (a) and (b)) The ThresholdMonitor.thresholdMonitorStatus will be Active.
notifyObjectCreationEmitted.	The notifyObjectCreation is emitted to indicate the creation of a ThresholdMonitor.

7.4.1.6 Exceptions

Exception Name	Definition
invalidClassOrInstances	Condition: (validClassAndInstances) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
invalidGranularityPeriod	Condition: (validGranularityPeriod) not verified.
	Returned Information: Name of the exception; status is set to
	'Failure'.
	Exit state: Entry state.
noValidMeasurementType	Condition: (someValidMeasurementType) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
invalidNumberOfThresholdPackElements	Condition: 4(validNumberOfThresholdPackElements) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
invalidOrderOfThresholdPackElements	Condition: (validOrderOfThresholdPackElements) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
invalidDirection	Condition: (validDirection) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.

7.4.2 Operation deleteThresholdMonitor (M)

7.4.2.1 Definition

This operation supports IRPManager's request to delete a specified ThresholdMonitor.

At the time of the removal, all outstanding (a) threshold-crossing or (b) threshold reaching alarms will stay (i.e. the FMIRP Agent's AlarmList will contain an AlarmInformation indicating (a) threshold-crossing or (b) threshold reaching). The IRPManager needs to use other means to remove the AlarmInformation in the FMIRP AlarmList. (See 6.3.8.1 for clarification of the alternatives (a) and (b))

7.4.2.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
monitorId	M	ThresholdMonitor.monitorId	It specifies the ThresholdMonitor to be stopped and
			removed.

7.4.2.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
status	М	ENUM (Success,	An operation may fail because of a specified or unspecified
		Failure)	reason.

7.4.2.4 Pre-condition

 ${\tt threshold} {\tt MonitorExists}.$

Assertion Name	Definition
thresholdMonitorExists	ThresholdMonitor specified in the input parameters exists.

7.4.2.5 Post-condition

thresholdMonitorIsDeleted AND notifyObjectDeletionEmitted..

Assertion Name	Definition
thresholdMonitorIsDeleted	ThresholdMonitor identified by monitorId ceases to exist.
notifyObjectDeletionEmitted	The notifyObjectDeletion is emitted to indicate the deletion of a ThresholdMonitor.

7.4.2.6 Exceptions

Exception Name	Definition
unknownThresholdMonitor	Condition: (thresholdMonitorExists) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.

7.4.3 Operation listThresholdMonitors (M)

7.4.3.1 Definition

This operation supports IRPManager's request to list detailed information about all or specified ThresholdMonitors.

7.4.3.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
monitorIdList			This parameter specifies the ThresholdMonitors to be listed. If the parameter specifies the list of monitorIds, then the corresponding information of ThresholdMonitors will be returned. If the parameter contains no information, all the ThresholdMonitors in the PMIRP Agent will be returned.

7.4.3.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
monitorInfoList		List of < attributes of ThresholdMonitor (see definition and legal values in clause 6.5.1), iOCName, iOCInstanceList, thresholdInfoList (See clause 7.4.1.2 input parameters of create thresholdMonitor operation) >	Returned information of corresponding ThresholdMonitors matching the input criteria. If no match, then the length of the monitorInfolist will be 0 (with status == Success).
status	M	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified reason.

7.4.3.4 Pre-condition

monitorIdListIsValid.

Assertion Name	Definition
monitorIdListIsValid	monitorIdList specified in the input parameter is valid.

7.4.3.5 Post-condition

 ${\tt thresholdMonitorsAreReturned}\ AND\ {\tt thresholdsAreUnaffected}.$

Assertion Name	Definition
thresholdMonitorsAre	The information of required ThresholdMonitors are returned in the output
Returned	parameters.
thresholdsAreUnaffected	The ThresholdMonitors are not affected.

7.4.3.6 Exceptions

Exception Name	Definition	
invalidMonitorIdList	Condition: (monitorIdListIsValid) not verified.	
	Returned information: output parameter status is set to 'Failure'.	
	Exit state: Entry State.	

7.5 PMIRPOperations_3 Interface (O)

7.5.1 Operation suspendThresholdMonitor (M)

7.5.1.1 Definition

This operation supports IRPManager's request to suspend the ThresholdMonitor. If the operation succeed, its thresholdMonitorStatus shall be set to "Suspended". PMIRP shall not emit performance alarms related to this ThresholdMonitor. The ThresholdMonitor shall still exist.

7.5.1.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
monitorId	М	ThresholdMonitor.monitorId	It specifies the ThresholdMonitor to be suspended.

7.5.1.3 Output parameters

Parameter Qualifier Matching Information		Matching Information	Comment
Name			
status	М	ENUM (Success, Failure)	An operation may fail because of a specified or unspecified reason.

7.5.1.4 Pre-condition

thresholdMonitorExists AND thresholdMonitorIsNotSuspended.

Assertion Name	Definition
thresholdMonitorExists	ThresholdMonitor specified in the input parameter exists.
thresholdMonitorIsNotSuspended	ThresholdMonitor specified in the input parameter is not suspended.

7.5.1.5 Post-condition

 $threshold \texttt{MonitorIsS} uspended \ AND \ notify \texttt{ThresholdMonitorStatusChangedEmitted}.$

Assertion Name	Definition
thresholdMonitorIsSuspended	The ThresholdMonitor identified by monitorId is
	suspended, that means it will not work until it is resumed.
	The ThresholdMonitor.thresholdMonitorStatus will
	be 'Suspended'.
notifyThresholdMonitorStatusChangedEmitted	The notifyThresholdMonitorStatusChanged is emitted.

7.5.1.6 Exceptions

Exception Name	Definition
unknownThresholdMonitor	Condition: (thresholdMonitorExists) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
thresholdMonitorAlreadySuspended	Condition: (thresholdMonitorIsNotSuspended) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.

7.5.2 Operation resumeThresholdMonitor (M)

7.5.2.1 Definition

This operation supports IRPManager's request to resume a suspended ThresholdMonitor.

7.5.2.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
monitorId	M	ThresholdMonitor.monitorId	It specifies the ThresholdMonitor to be resumed.

7.5.2.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
status	M	ENUM (Success, Failure)	An operation may fail because of a specified or
			unspecified reason.

7.5.2.4 Pre-condition

 $threshold \verb|MonitorExists| AND threshold \verb|MonitorIsSuspended|.$

Assertion Name	Definition
thresholdMonitorExists	ThresholdMonitor specified in the input parameter exists.
thresholdMonitorIsSuspended	ThresholdMonitor specified in the input parameter is suspended.

7.5.2.5 Post-condition

 $threshold \texttt{MonitorIsResumed} \ AND \ \texttt{notifyThresholdMonitorStatusChangedEmitted}.$

Assertion Name	Definition
thresholdMonitorIsResumed.	The ThresholdMonitor identified by monitorId is resumed,
	that means it will work again. The
	ThresholdMonitor.thresholdMonitorStatus will be
	"Active'.
notifyThresholdMonitorStatusChangedEmitted	The notifyThresholdMonitorStatusChanged is emitted.

7.5.2.6 Exceptions

Exception Name	Definition
unknownThresholdMonitor	Condition: (thresholdMonitorExists) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.
thresholdMonitorIsNotSuspended	Condition: (thresholdMonitorIsSuspended) not verified.
	Returned information: output parameter status is set to 'Failure'.
	Exit state: Entry State.

7.6 PMIRPNotification_1 Interface (M)

7.6.1 notifyMeasurementJobStatusChanged (M)

7.6.1.1 Definition

The PMIRP Agent notifies all subscribed IRPManagers about the status changes of a MeasurementJob. The status changes in that case include Suspended=>Scheduled, Active=>Suspended, Scheduled=>Suspended, Suspended=>Active, Scheduled=>Active, Active=>Stopped, Suspended=>Stopped, Scheduled=>Stopped.

7.6.1.2 Input parameters

Parameter Name	Qualifier	Matching Information	Comment
objectClass	M, Y	PMIRP.objectClass	Notification header - see [12]. It shall carry the
			PMIRP class name.
objectInstance	M, Y	PMIRP.objectInstance	Notification header - see [12]. It shall carry the
			DN of the PMIRP.
eventTime	M, Y		Notification header - see [12].
notificationType	M, Y	"notifyMeasurementJobStatusChanged"	Notification header - see [12].
systemDN	C, Y		Notification header - see [12].
notificationId	M, N		Notification header - see [12].
jobId	M, Y	MeasurementJob.jobId	
jobStatus	M, N	MeasurementJob.jobStatus	The new status of the MeasurementJob.
reason	O, N		It carries one or several of the assertion names
			of the From-state of Triggering Event.

7.6.1.3 Triggering Event

7.6.1.3.1 From-state

Assertion Name	Definition
failToReadMeasurementTypesForExtendedProlongPeriod	Because the PMIRP Agent have failed to read the monitored measurementType (s) from managed resources for one or more times, the PMIRP Agent decides that it will not try to read in the future and
	place the MeasurementJob in "Stopped" state.
internalProblem	Because of an unspecified internal problem, PMIRP Agent decides that it no longer can maintain the MeasurementJob in any jobStatus but "Stopped".
stopMeasurementJob	The stopMeasurementJob returns success.
stopTimeReached	The stop time for MeasurementJob has been reached.
resumeMeasurementJob	The resumeMeasurementJob returns success.
suspendMeasurementJob	The suspendMeasurementJob returns success.
startTimeReached	The start time for MeasurementJob has been reached.
suspendMeasurementJobBySystem	The MeasurementJob has been suspended by the system in case of overload

7.6.1.3.2 To-state

 ${\tt measurementJobStatusChanged}$

Assertion Name	Definition	
measurementJobStatusChanged	The MeasurementJob.jobStatus changed to a new value.	

7.6.2 Void

7.7 PMIRPNotification_2 Interface (O)

7.7.1 notifyThresholdMonitorObjectCreation (M)

7.7.1.1 Definition

IRPAgent notifies the subscribed IRPManager that a new Monitor instance has been created and that the notification satisfies the filter constraint expressed in IRPManager"s subscribe operation (see TS 32.302 [12]).

7.7.1.2 Input Parameters

Parameter Name	Qualifier	Matching Information	Comment
objectClass	M, Y	PMIRP.objectClass	See Table 7.6.1.2.
objectInstance	M, Y	PMIRP.objectInstance	See Table 7.6.1.2.
notificationId	M. N	-	See Table 7.6.1.2.
eventTime	M, Y	ManagedEntity.creationTime	See Table 7.6.1.2.
systemDN	C, Y	-	See Table 7.6.1.2.
notificationType	M, Y	'notifyThresholdMonitorObjectCreation'	Notification header - see [12].
monitorId	M, N		See monitorld definition in clause 6.5.1.
monitorGranularityPeriod	M, N		See monitorGranularityPeriod definition in clause 6.5.1.
thresholdMonitorStatus	M, N	ThresholdMonitor.thresholdMonitorStatus	See thresholdMonitorStatus definition in clause 6.5.1.

7.7.1.3 Triggering Event

7.7.1.3.1 From-state

stateBeforeObjectCreation.

Assertion Name	Definition
stateBeforeObjectCreation	The number of instances of the IOC ManagedEntity is equal to N.

7.7.1.3.2 To-state

stateAfterObjectCreation.

Assertion Name	Definition	
stateAfterObjectCreation	The number of instances of the IOC ManagedEntity is equal to N + 1.	

7.7.2 notifyThresholdMonitorObjectDeletion (M)

7.7.2.1 Definition

IRPAgent notifies the subscribed IRPManager of a deleted Monitor instance. The IRPAgent invokes this notification because the subject notification satisfies the filter constraint expressed in the IRPManager subscribe operation (see TS 32.302 [12]).

7.7.2.2 Input Parameters

Parameter Name	Qualifier	Matching Information	Comment
objectClass	M, Y	PMIRP.objectClass	See Table 7.6.1.2.
objectInstance	M, Y	PMIRP.objectInstance	See Table 7.6.1.2.
notificationId	M, N		See Table 7.6.1.2.
eventTime	M, Y	ManagedEntity.deletionTime	See Table 7.6.1.2.
systemDN	C, Y		See Table 7.6.1.2.
notificationType	M, Y	'notifyThresholdMonitorObjectDeletion'	Notification header - see [12].
monitorId	M, Y	Monitor.monitored	See monitorld definition in clause 6.5.1.

7.7.2.3 Triggering Event

7.7.2.3.1 From-state

stateBeforeObjectDeletion.

Assertion Name	Definition
stateBeforeObjectDeletion	The number of instances of the IOC ManagedEntity is equal to N.

7.7.2.3.2 To-state

 ${\tt stateAfterObjectDeletion}.$

Assertion Name Definition	
stateAfterObjectDeletion	The number of instances of the IOC ManagedEntity is equal to N - 1.

7.7.3 notifyThresholdMonitorStatusChanged (O)

7.7.3.1 Definition

The PMIRP Agent notifies all subscribed IRPManagers about the status changes of a ThresholdMonitor. The status changes in that case include Suspended=>Active, Active=>Suspended.

NOTE: The notifyThresholdMonitorStatusChanged notification is mandatory if PMIRPOperations_2 is supported.

7.7.3.2 Input Parameters

Parameter Name	Qualifier	Matching Information	Comment
objectClass	M, Y	PMIRP.objectClass	See Table 7.6.1.2.
objectInstance	M, Y	PMIRP.objectInstance	See Table 7.6.1.2.
eventTime	M, Y		See Table 7.6.1.2.
notificationType	M, Y	"notifyThresholdMonitorStatusChanged".	See Table 7.6.1.2.
systemDN	C, Y		See Table 7.6.1.2.
notificationId	M, N		See Table 7.6.1.2.
monitorId	M, Y	Monitor.monitorId	
monitorStatus	M, N	ThresholdMonitor.thresholdMonitorStatus	The new status of the ThresholdMonitor.
reason	O, N		It carries one or several of the
			assertion names of the From-state
			of Triggering Event.

7.7.3.3 Triggering Event

7.7.3.3.1 From-state

 $\verb"resumeThresholdMonitor" OR suspendThresholdMonitor"$

Assertion Name	Definition
resumeThresholdMonitor	The resumeThresholdMonitor returns success.
suspendThresholdMonitor	The suspendThresholdMonitor returns success.

7.7.3.3.2 To-state

 $threshold {\tt MonitorStatusChanged}$

Assertion Name	Definition
thresholdMonitorStatusChanged	The ThresholdMonitor.thresholdMonitorStatus changed to a new value.

8 Scenarios

8.1 createMeasurementJob

Figure 8.1: Scenario1 of Performance Management

8.2 stopMeasurementJob

Figure 8.2: Scenario2 of Performance Management

8.3 stopMeasurementJob/listMeasurementJobs/listFiles

Figure 8.3: Scenario3 of Performance Management

8.4 suspendMeasurementJob/resumeMeasurementJob

Figure 8.4: Scenario4 of Performance Management

Annex A (normative): Illustration of the state described in the state Diagram

A.1 Definition of state

A.1.1 Scheduled

"Scheduled" means that the job has been created and the start time has not been reached.

A.1.2 Suspended

"Suspended" means that the job has been suspended for some reason.

A.1.3 Active

"Active" means that the start time of a MeasurementJob has been reached.

There are two sub-states: "Busy" and "Idle".

"Busy" means that the MeasurementJob is monitoring the measurementTypes.

"Idle" means that the MeasurementJob is not monitoring the measurementTypes.

When a MeasurementJob becomes active, it does not mean that the job is immediately busy. IRPManager can set the detailed time frame (e.g. dailySchedule or weeklySchedule) for a MeasurementJob to be busy. If there is no time frame schedule for a job, it immediately monitors the measurement types when it becomes active.

A.1.4 Stopped

"Stopped" means that the MeasurementJob is deleted via the Itf-N. Whether the managed system removes the MeasurementJob immediately or later is vendor specific.

A.2 State transition scenarios

The following scenarios give examples of state transitions.

A.2.1 Scenario 1

A MeasurementJob is created at 11:00, and the startTime is 14:00, stopTime is 18:00. At 12:00, the MeasurementJob is suspended, and at 13:00, the MeasurementJob is resumed.

- At 11:00: the Measurement Job becomes scheduled after it was created.
- At 12:00: the MeasurementJob is suspended and the jobStatus is "Suspended".
- At 13:00: the MeasurementJob is resumed, and the jobStatus is "Scheduled" because the start time has not been reached.
- At 14:00: the Measurement Job becomes active because start time has been reached.

Figure A.2.1: Scenario 1

A.2.2 Scenario 2

A MeasurementJob is created at 11:00, and the startTime is 12:00, stopTime is 18:00. At 13:00, the MeasurementJob is suspended, and at 14:00, the MeasurementJob is resumed.

- At 11:00: the MeasurementJob becomes scheduled after it was created.
- At 12:00: the start time is reached, and the jobStatus is "Active".
- At 13:00: the MeasurementJob is suspended, and the jobStatus is "Suspended".
- At 14:00: the MeasurementJob is resumed, and the jobStatus is "Active".

Figure A.2.2: Scenario 2

A.2.3 Scenario 3

A MeasurementJob is created at 11:00 and the startTime is 12:00, stopTime is never stop. There is no other schedule defined. IRPManager stops the job at 14:00.

At 12:00: the Measurement Job becomes active when start time is reached. Since there is no schedule for the job, it starts monitoring measurement types immediately.

At 14:00: the MeasurementJob is stopped when IRPManager stops the job.

Figure A.2.3: Scenario 3

A.2.4 Scenario 4

A MeasurementJob is created at 11:00 and the startTime is 12:00, stopTime is 14:00. There is no other schedule defined.

At 12:00: the MeasurementJob becomes active when start time is reached. Since there is no schedule for the job, it starts monitoring measurement types immediately.

At 14:00: the MeasurementJob is stopped automatically when stop time is reached.

Figure A.2.4: Scenario 4

A.2.5 Scenario 5

A MeasurementJob is created at 11:00 and the startTime is 12:00, stopTime is "never stop". There is a dailySchedule defined, which is $13:00\sim14:00$ and $15:00\sim16:00$ every day.

At 12:00: the MeasurementJob becomes active when start time has been reached. Since there is a schedule for the job, the job monitors measurement types only during the specified schedule. During other times, the job is idle.

At 13:00 and 15:00: the Measurement Job becomes busy when the daily schedule has been reached.

Figure A.2.5: Scenario 5

A.2.6 Scenario 6

A MeasurementJob is created at 11:00 and the startTime is 12:00, stopTime is 13:30. The MeasurementJob.granularityPeriod is 30 minutes and the MeasurementJob.reportingPeriod is 1 hour. There is no other schedule defined.

- At 12:00: the MeasurementJob becomes active when start time is reached. Since there is no detailed time frame for the job, the job begins to work at the same time.
- At 13:00: the file(s) of the MeasurementJob are available, and PMIRP emits the notifyFileReady notification to subscripted IRPManager.
- At 13:30: the MeasurementJob is automatically stopped when stop time is reached.
- At 14:00: PMIRP will emit the last notifyFileReady notification.

Figure A.2.6: Scenario 6

Annex B (normative): Threshold related performance alarms Triggering Events

This annex defines the Triggering Events for the various performance alarms. The Triggering Events normally are defined by each notification type, such as notifyChangedAlarm, under the clause "Triggering Events". The Triggering Events related to thresholding are defined here collectively for ease of reference.

The Triggering Events are defined in a state transition table. The column labels (e.g. 0, 1, 2, 3 of table in clause B.1) denote the to-state while the row labels denote the from-state. The cell denotes the emission action.

There are two clauses. Clause B.1 defines the Triggering Events for IRPAgent that supports notifyChangedAlarm. Clause B.2 defines those for IRPAgent that does not support notifyChangedAlarm.

Clause B.3 provides samples of triggering events.

B.1 IRPAgent supporting notifyChangedAlarm

Table B.1

	To State-0	To State-1	To State-2	To State-3	To State-4
From	no emission	1 notifyNewAlarm	1 notifyNewAlarm	1 notifyNewAlarm	1 notifyNewAlarm
State-0					
From	1 notifyClearedAlarm	no emission	1 notifyChangedAlarm	1 notifyChangedAlarm	1 notifyChangedAlarm
State-1					
From	1 notifyClearedAlarm	1 notifyChangedAlarm	no emission	1 notifyChangedAlarm	1 notifyChangedAlarm
State-2					
From	1 notifyClearedAlarm	1 notifyChangedAlarm	1 notifyChangedAlarm	no emission	1 notifyChangedAlarm
State-3					
From	1 notifyClearedAlarm	1 notifyChangedAlarm	1 notifyChangedAlarm	1 notifyChangedAlarm	no emission
State-4					

The horizontal '0', '1', '2', '3' and '4' are the to-states indicating the current measurementType value with respect to the different threshold levels. Threshold levels are associated with severity level (thresholdSeverity). Higher threshold level associates with higher severity level (thresholdSeverity).

EXAMPLE:

If direction = 'Increasing', state-0 means the measurementType value is below all thresholds. State-2 means that the measurementType value is above threshold level 2 but below threshold level 3. If direction = 'Decreasing', state-0 means the measurementType value is above all thresholds. State-2 means that the measurementType value is below threshold level 2 but above threshold level 3.

The vertical '0', '1', '2", '3' and '4' are the from-states indicating the last-read measurementType value with respect to the threshold levels.

A threshold has a value and may have a hysteresis. A threshold with hysteresis has a threshold-high value and a threshold-low value that are different from the threshold value. A threshold without hysteresis can be considered as a threshold whose threshold-high and threshold-low values are equal to the threshold value.

For the direction = 'Increasing', the shaded cells indicate transitions caused by measurementType values (a) rising across or (b) reach one or more threshold-high values. The non-shaded cells indicate transition caused by measurementType values falling across one or more threshold-low values.

For the direction = 'Decreasing', the shaded cells indicate transitions caused by measurementType values (a) falling across or (b) reach one or more threshold-low values. The non-shaded cells indicate transition caused by measurementType values rising across one or more threshold-high values.

Each cell indicates the performance alarm emission when from-state transits to to-state. The notifyNewAlarm and notifyChangedAlarm shall carry the severity level (perceivedSeverity) associated with the to-state (thresholdSeverity).

The ThresholdMonitor determines, at monitorGP=X, if a threshold has been (a) crossed or (b) reached by comparing the value read at monitorGP==X with the value read at monitorGP==X-1. In initial condition (i.e. when the ThresholdMonitor reads the value at monitorGP=1), the (hypothetical) value read at monitorGP==X-1 is assumed to be at state-0.

(See 6.3.8.1 for clarification of the alternatives (a) and (b))

B.2 IRPAgent not supporting notifyChangedAlarm

Table B.2

•	To State-0	To State-1	To State-2	To State-3	To State-4
From	no emission	1 notifyNewAlarm	1 notifyNewAlarm	1 notifyNewAlarm	1 notifyNewAlarm
State-0					
From	1 notifyClearedAlarm	no emission	1 notifyClearedAlarm	1 notifyClearedAlarm	1 notifyClearedAlarm
State-1			1 notifyNewAlarm	1 notifyNewAlarm	1 notifyNewAlarm
From	1 notifyClearedAlarm	1 notifyClearedAlarm	no emission	1 notifyClearedAlarm	1 notifyClearedAlarm
State-2		1 notifyNewAlarm		1 notifyNewAlarm	1 notifyNewAlarm
From	1 notifyClearedAlarm	1 notifyClearedAlarm	1 notifyClearedAlarm	no emission	1 notifyClearedAlarm
State-3		1 notifyNewAlarm	1 notifyNewAlarm		1 notifyNewAlarm
To State-4	1 notifyClearedAlarm	1 notifyClearedAlarm 1 notifyNewAlarm	1 notifyClearedAlarm 1 notifyNewAlarm	1 notifyClearedAlarm 1 notifvNewAlarm	no emission

The Monitor determines, at monitorGP=X, if a threshold has been crossed by comparing the value read at monitorGP=X with the value read at monitorGP=X-1. In initial condition (i.e. when the Monitor reads the value at monitorGP=X-1), the (hypothetical) value read at monitorGP=X-1 is assumed to be at state-0.

B.3 Examples

B.3.1 Example 1

Figure B.3.1 illustrates multi-level thresholdSeverity thresholding behaviour. The horizontal axis indicates the time intervals specified by the Monitor.monitorGranularityPeriod (monitorGP). The vertical axis indicates the monitored measurementType values. The measurementType of this example is of type gauge. The Monitor.direction is set to "Increasing".

Further suppose that the measurementType is monitored for a (a) two-level-severity-threshold-crossings or (b) two-level-severity-threshold reaching. (See 6.3.8.1 for clarification of the alternatives (a) and (b))

The threshold for the lower-level-severity is set to 3 with a hysteresis low and high levels set to 2 and 4 respectively (i.e. hysteresis value = 1). The thresholdSeverity level is Minor.

The threshold for the higher-level-severity is set to 7 with a hysteresis low and high levels set to 6 and 8 respectively (i.e. hysteresis value = 1). The thresholdSeverity level is Major.

The performance alarm triggering events are:

- At monitorGP interval 3, trigger a notifyNewAlarm with perceivedSeverity (ps) = Minor.
- 2. At monitorGP interval 5, if the IRPAgent supports notifyChangedAlarm, trigger a notifyChangedAlarm with ps = Major; else a notifyClearAlarm and a notifyNewAlarm with ps = Major.
- 3. At monitorGP interval 8, if the IRPAgent supports notifyChangedAlarm, trigger a notifyChangedAlarm with ps = Minor; else a notifyClearAlarm and a notifyNewAlarm with ps = Minor.
- 4. At monitorGP interval 15, trigger a notifyClearedAlarm clearing the last emitted Minor alarm.

Thresholding behavior for direction Increasing for Gauge type PMAttribute

Figure B.3.1

B.3.2 Example 2

Figure B.3.2 illustrates another multi-level thresholdSeverity thresholding behaviour for IRPAgent supporting notifyChangedAlarm. The horizontal axis indicates the time intervals specified by the GP. The vertical axis indicates the monitored measurementType values. The measurementType of this example is of type gauge. The Monitor.direction is set to "Decreasing".

Further suppose that the measurementType is monitored for a two-level thresholdSeverity (a) threshold-crossing or (b) threshold reaching. (See 6.3.8.1 for clarification of the alternatives (a) and (b))

The threshold for the major-level thresholdSeverity is set to 7 with a hysteresis high and low levels set to 6 and 8 respectively.

The threshold for the minor-level thresholdSeverity is set to 9 with a hysteresis high and low levels set to 8 and 10 respectively.

The performance alarm triggering events are:

- 1. At monitorGP interval 1, trigger a notifyNewAlarm with ps = Major. See table B.1 table for transition State-0 to State-2.
- 2. At monitorGP interval 5, trigger a notifyChangedAlarm with ps = Minor. See table B.1 for transition State-2 to State-1.
- 3. At monitorGP interval 8, trigger a notifyChangedAlarm with ps = Major. See table B.1 for transition State-1 to State-2.

Figure B.3.2

B.3.3 Example 3

Figure B.3.3 illustrates a single-level thresholding behaviour. The horizontal axis indicates the time intervals specified by the monitorGP. The vertical axis indicates the monitored measurementType values. The measurementType of this example is of type gauge. The Monitor.direction is set to "Increasing".

The threshold is set to 4 with a hysteresis high and low levels set to 5 and 3 respectively. The thresholdSeverity level is Critical.

The performance alarm triggering events are:

- 1. At monitorGP interval 3, trigger a notifyNewAlarm with ps = Critical.
- 2. At monitorGP interval 11, trigger a notifyClearedAlarm with ps = Cleared.

Figure B.3.3
