## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

## Introduction

Due to the growing number of specifications to model new services and Resource Models for Configuration Management (CM), as well as the expected growth in size of each of them from 3GPP Release 4 onwards, a new structure of the specifications is already needed in Release 4. This structure is needed for several reasons, but mainly to enable more independent development and release for each part, as well as a simpler document identification and version handling. Another benefit would be that it becomes easier for bodies outside 3GPP, such as the ITU-T, to refer to telecom management specifications from 3GPP. The new structure of the specifications does not lose any information or functionality supported by the Release 1999. The restructuring also includes defining new IRPs for the Network Resource Model (NRM) parts of R99 Basic CM IRP (Generic, Core Network and UTRAN NRM). These IRPs are named “Network Resources IRP”.

Further, the Notification IRP (in Release 1999: 32.106-1 to -4) and the Name convention for Managed Objects (in Release 1999: 32.106-8) have been moved to a separate number series used for specifications common between several management areas (e.g. CM, FM, PM).

Finally, in addition to the restructuring mentioned above, the need to define some new functionality and IRPs for CM compared to Release 1999, has also been identified. Firstly, a new Bulk CM IRP, and secondly an a GERAN Network Resources IRP, have been created. Thirdly, the Generic, UTRAN and GERAN Network Resources IRPs have been extended with support for GSM-UMTS Inter-system handover (ISH), and the 32.600 (Concept and High-level Requirements) has been modified to cover the high-level Bulk CM and ISH requirements.

**Table: Mapping between Release '99 and the new specification numbering scheme**

R99 Old no.	Old (R99) specification title	Rel-4 New no.	New (Rel-4) specification title
32.106-1	3G Configuration Management: Concept and Requirements	32.600	<b>3G Configuration Management: Concept and High-level Requirements</b>
32.106-1	<Notification IRP requirements from 32.106-1 and 32.106-2>	32.301	<b>Notification IRP:</b> Requirements

		32.654	GERAN Network Resources IRP: CMIP SS

## 1 Scope

The present document specifies the Common Management Information Protocol (CMIP) Solution Set (SS) for the Generic Network Resource Integration Reference Point (IRP): Network Resource Model defined in 3GPP TS 32.622. In detail:

- Clause 4 contains an introduction to some concepts that are the base for some specific aspects of the CMIP interfaces.
- Clause 5 contains the GDMO definitions for the Alarm Management over the CMIP interfaces
- Clause 6 contains the ASN.1 definitions supporting the GDMO definitions provided in clause 5.

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

- [1] 3GPP TS 32.101: "3G Telecom Management principles and high level requirements".
- [2] 3GPP TS 32.102: "3G Telecom Management architecture".

- [9] ITU-T Recommendation M.3100 (07/95): "Maintenance Telecommunications Management Network – Generic Network Information Model".

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.600 and 3GPP TS 32.622 apply.

## 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CMIP	Common Management Information Protocol
DN	Distinguished Name
GDMO	Guidelines for the Definition of Managed Objects
IDL	Interface Definition Language
IEC	International Electro-technical Commission
ISO	International Standards Organization
ITU-T	International Telecommunication Union, Telecommunication Sector
MIB	Management Information Base
MIM	Management Information Model
MIT	Management Information Tree (or Naming Tree)
MOC	Managed Object Class
MOI	Managed Object Instance
NE	Network Element
NR	Network Resource
NRM	Network Resource Model
TMN	Telecommunications Management Network

## 4 Basic aspects

### 4.1 Explanation

A technology independent generic network resource model is defined in 3GPP TS 32.622 for 3G networks. This document provides an implementation of this generic network resource model by using CMIP technology.

### 4.2 Allowed Alarms of MOCs

Table 1 defines the allowed alarms of each MOCs for this CMIP Solution Set. The MOCs, which do not appear in table 1, may not issue any alarm except the alarms that are defined as allowed for its super-class MOC(s) in the inheritance tree.

**Table 1: Allowed alarms of MOCs**

MOCs	Legal Alarms
subNetwork	EnvironmentalAlarm
managedElement	environmentalAlarm equipmentAlarm communicationsAlarm processingErrorAlarm
managementNode	environmentalAlarm equipmentAlarm communicationsAlarm processingErrorAlarm
managedFunction	communicationsAlarm processingErrorAlarm QualityofServiceAlarm
irpAgent	communicationsAlarm processingErrorAlarm
alarmControl (TS 32.111-4)	alarmListRebuiltAlarm

## 4.3 Mapping

The semantic of the Generic Network Resource Model is defined in 3GPP TS 32.622. The specification of the information object classes defined there is independent of any implementation technology and protocol. This subclause maps these technology and protocol independent definitions onto the equivalencies of the CMIP Solution Set of the Generic Network Resource IRP.

### 4.3.1 Mapping of MOCs

Table 2 maps the managed object classes defined in the Generic Network Resource Model onto the equivalent MOCs of the CMIP Solution Set.

**Table 2: Mapping of MOCs**

Managed Objects of the Generic NR IRP NRM	MOCs of this CMIP SS
ManagedElement	managedElement
SubNetwork	subNetwork
IRPAgent	irpAgent
ManagedFunction	managedFunction
ManagementNode	managementNode
MeContext	meContext
BasicCmIRP	bcmControl
VsDataContainer	vsDataContainer
BulkCmIRP	bulkCmControl

### 4.3.2 Mapping of Attributes

**Table 3: Mapping of Attributes**

Attribute defined in 3GPP TS 32.622	Attribute defined in this CMIP SS
dnPrefix	systemTitle (ITU-T Recommendation X.721: 1992)
managedElementId	managedElementId
subNetworkId	subNetworkId
irpAgentId	irpAgentId
locationName	locationName (ITU-T Recommendation M.3100: 1995)
managedBy	meManagedBy
managedElementType	managedElementType
managementNodeId	managementNodeId
manages	mnManagesList
meContextId	meContextId
systemDN	not needed
userDefinedState	userDefinedState
userLabel	userLabel (ITU-T Recommendation M.3100: 1995)
vendorName	vendorName (ITU-T Recommendation M.3100: 1995)
vsDataContainerId	vsDataContainerId
vsDataType	vsDataType
vsData	vsData
vsDataFormatVersion	vsDataFormatVersion
bulkCmIrpld	bulkCmControlId
irpVersion	irpVersion
userDefinedNetworkType	userDefinedNetworkType
swVersion	swVersion

## 5 GDMO Definitions

### 5.1 Managed Object Classes

#### 5.1.1 subNetwork

**subNetwork** MANAGED OBJECT CLASS

DERIVED FROM "Recommendation X.721: 1992":top;

CHARACTERIZED BY

subNetworkBasicPackage;

CONDITIONAL PACKAGES

"Recommendation M.3100: 1995":attributeValueChangeNotificationPackage PRESENT IF

"the attributeValueChange notifications defined in Recommendation X.721

are supported by an instance of this class.",

"Recommendation M.3100: 1995":environmentalAlarmPackage PRESENT IF

"the environmentalAlarm notifications defined in Recommendation X.721

are supported by an instance of this class.";

REGISTERED AS {ts32-624ObjectClass 1};

#### 5.1.2 managedElement

**managedElement** MANAGED OBJECT CLASS

DERIVED FROM "Recommendation X.721: 1992":top;

CHARACTERIZED BY

managedElementBasicPackage,

managedElementAssociationPackage;

CONDITIONAL PACKAGES

rootOptionalPackage PRESENT IF

"An instance of managedElement is the accessing root of a MIB.",

"Recommendation M.3100: 1995":createDeleteNotificationsPackage PRESENT IF

"the objectCreation and the objectDeletion defined in Recommendation

X.721 are supported by an instance of this class.",

"Recommendation M.3100: 1995":attributeValueChangeNotificationPackage PRESENT IF

"the attributeValueChange notifications defined in Recommendation X.721

are supported by an instance of this class.",

"Recommendation M.3100: 1995":processingErrorAlarmPackage PRESENT IF

"the processingErrorAlarm notifications defined in Recommendation X.721

are supported by an instance of this class.",

"Recommendation M.3100: 1995":environmentalAlarmPackage PRESENT IF

  qualityOfServiceAlarmPackage PRESENT IF

  "the qualityOfServiceAlarm notifications defined in Recommendation X.721

  are supported by an instance of this class.";

REGISTERED AS {ts32-624ObjectClass 7};

### 5.1.8 meContext

**meContext** MANAGED OBJECT CLASS

DERIVED FROM "Recommendation X.721: 1992":top;

CHARACTERIZED BY  
 meContextBasicPackage;

CONDITIONAL PACKAGES

rootOptionalPackage PRESENT IF  
 "An instance of meContext is the accessing root of a MIB.",  
 "Recommendation M.3100: 1995":createDeleteNotificationsPackage PRESENT IF  
 "the objectCreation and the objectDeletion defined in Recommendation  
 X.721 are supported by an instance of this class.";

REGISTERED AS {ts32-624ObjectClass 8};

### 5.1.9 bcmControl

**bcmControl** MANAGED OBJECT CLASS

DERIVED FROM "Recommendation X.721: 1992":top;

CHARACTERIZED BY  
 bcmControlBasicPackage,  
 bcmIRPVersionPackage;

REGISTERED AS {ts32-624ObjectClass 9};

## 5.2 Packages

### 5.2.1 subNetworkBasicPackage

**subNetworkBasicPackage** PACKAGE

BEHAVIOUR  
 subNetworkBasicPackageBehaviour;

ATTRIBUTES  
 subNetworkId GET,  
 "Recommendation X.721: 1992": systemTitle GET,  
 "Recommendation M.3100: 1995" : userLabel GET-REPLACE,  
 userDefinedNetworkType GET;

REGISTERED AS {ts32-624Package 1};

**subNetworkBasicPackageBehaviour** BEHAVIOUR

DEFINED AS  
 "This managed object class represents collections of interconnected  
 telecommunications and management objects (logical or physical) capable of  
 exchanging information. A network may be nested within another (larger) network,  
 thereby forming a containment relationship.";

### 5.2.2 managedElementBasicPackage

**managedElementBasicPackage** PACKAGE

BEHAVIOUR  
 managedElementBasicPackageBehaviour;

ATTRIBUTES

```

managedElementId GET,
managedElementType GET,
userDefinedState GET-REPLACE,
"Recommendation M.3100: 1995" : userLabel GET-REPLACE,
"Recommendation M.3100: 1995" : vendorName GET,
"Recommendation M.3100: 1995" : locationName GET,
swVersion GET;
REGISTERED AS {ts32-624Package 2};

```

#### **managedElementBasicPackageBehaviour BEHAVIOUR**

##### **DEFINED AS**

"This managed object class represents telecommunications equipment within the telecommunications network that performs managed element functions, i.e. provides support and/or service to the subscriber. A managed element communicates with a manager (directly or indirectly) over one or more standard interfaces for the purpose of being monitored and/or controlled. A managed element contains equipment that may or may not be geographically distributed. A Managed Element is often referred to as a 'node' or a 'network element'. ";

### **5.2.3 managedElementAssociationPackage**

#### **managedElementAssociationPackage PACKAGE**

##### **BEHAVIOUR**

managedElementAssociationPackageBehaviour;

##### **ATTRIBUTES**

meManagedBy GET;

```
REGISTERED AS {ts32-624Package 3};
```

#### **managedElementAssociationPackageBehaviour BEHAVIOUR**

##### **DEFINED AS**

"The attribute 'meManagedBy' points to the managementNode instance which manages this managedElement instance. It implements the attribute *managedBy* of MOC ManagedElement defined in TS32.622.";

##### DEFINED AS

    "This Managed Object class corresponds to the class gsmManagedFunction defined in GSM 12.20 0 and is provided for sub-classing only. It provides the attributes that are common to functional MO classes. Note that a managed element may contain several managed functions. The ManagedFunction may be extended in the future if more common characteristics to functional objects are identified.";

### 5.2.12 meContextBasicPackage

#### **meContextBasicPackage PACKAGE**

##### BEHAVIOUR

    meContextBasicPackageBehaviour;

##### ATTRIBUTES

    meContextId GET;

REGISTERED AS {ts32-624Package 12};

#### **meContextBasicPackageBehaviour BEHAVIOUR**

##### **DEFINED AS**

"This managed object class represents the Managed Element from the network perspective. It can be used to hold surveillance status information, and also planning status information for the case when the managed element is part of a planned configuration in a management system, before it has been taken into service. It can also support unambiguous naming in all cases, also for scenarios when the Managed Elements have been pre-configured where some of them may have equal names (to avoid necessary administration to make all of them globally unique at creation/installation time). Thus, by means of globally unique names for the MEContext instances, and by using these in the DN, the DNs for all MEs (and MOIs contained in them) can be assured to be globally unique, even in such a scenario as described above.";
