December 2006 version 14.5

Data Sheet

## Introduction

This data sheet provides package information for Altera® devices. It includes these sections:

- [Device & Package Cross Reference](#) (below)
- [Thermal Resistance](#) (starting on page 17)
- [Package Outlines](#) (starting on page 38)

In this data sheet, packages are listed in order of ascending pin count.

## Thermal Resistance

Tables 16 through 37 provide  $\theta_{JA}$  (junction-to-ambient thermal resistance) and  $\theta_{JC}$  (junction-to-case thermal resistance) values for the following Altera device families:

- Stratix series FPGAs
- Cyclone series FPGAs
- MAX series CPLDs
- HardCopy series Structured ASICs
- APEX series FPGAs
- ACEX 1K FPGAs
- Mercury FPGAs
- FLEX series FPGAs
- Excalibur FPGA
- Classic devices

Altera is transitioning to an industry-standard copper lid for its thermally enhanced BGA and thermally enhanced Flip Chip FBGA package offerings (as mentioned in the *Process Change Notice PCN024* available on Altera's website: <http://www.altera.com/literature/pcn/pcn0214.pdf>). This change affects the APEX 20KE, APEX 20KC, APEX II, Mercury, and Excalibur device families. Therefore, two thermal resistance specifications are provided for devices affected by this change. The older packages are identified as using the aluminum silicon carbide (AlSiC) lid, while the newer packages are identified as using the copper (Cu) lid.

Thermally enhanced BGA and thermally enhanced Flip Chip FBGA packages offered in the newer Altera families, including Stratix and Stratix GX, were introduced using an industry-standard Cu lid. Therefore, these device specifications include only a single thermal resistance specification.

**Note to Table 30:**

- (1) “fin” is an extra heat sink that customers can add to the device. Several vendors make heat sinks, and they all have different sizes. Altera performed the thermal calculations in Table 30 using the following fin specifications: width: 0.25 mm; height: 7.0 mm; pitch: 1.5 mm; base thickness: 0.5 mm.
